This document outlines the syllabus to be used by doctors completing Paediatric Emergency Medicine training in the United Kingdom. It accompanies the RCPCH Progress curriculum and assessment strategy.

This is Version 1.0. As the document is updated, version numbers will be changed, and content changes noted in the table below.

Introduction

Paediatric Emergency Medicine (PEM) is a sub-specialty of both Paediatrics and Emergency Medicine and is concerned with providing highly specialised acute health care to children of all ages. This document is intended for doctors in Higher Specialty Training in Paediatrics or Emergency Medicine who wish to sub-specialise in PEM.

RCPCH - Curriculum

This syllabus supports the completion of the RCPCH Progress curriculum, and should be used in conjunction with the curriculum document. The purpose of the curriculum is to train doctors to acquire a detailed knowledge and understanding of health and illness in babies, children and young people. The curriculum provides a framework for training, articulating the standard required to work at Consultant level, and at key progression points during their training, as well as encouraging the pursuit of excellence in all aspects of clinical and wider practice.

The curriculum comprises of Learning Outcomes which specify the standard that trainees must demonstrate as they progress through training and ultimately attain a Certificate of Completion of Training (CCT). The syllabi support the curriculum by providing further instructions and guidance as to how the Learning Outcomes can be achieved and demonstrated.

RCPCH - Using the Syllabus

Paediatric trainees are required to demonstrate achievement of generic and sub-specialty or General Paediatric Learning Outcomes throughout their training period.

For all level 1 and level 2 trainees, there are 11 generic paediatric Learning Outcomes for each level. At level 3, there are a further 11 generic paediatric Learning Outcomes for all trainees, and several additional Learning Outcomes in either General Paediatrics or the GRID sub-specialty the trainee has been appointed into.

This syllabus contains 5 interlinked elements, as outlined in figure 1 which illustrates how each element elaborates on the previous one.
RCEM - Curriculum

This syllabus supports additional sub-specialty training in PEM. It should be read in conjunction with the parent Emergency Medicine curriculum where learning and teaching methods and the assessment system are described.

RCEM - Using the Syllabus

Emergency Medicine trainees will have acquired many of the PEM capabilities in this syllabus during the third year of core training and in higher specialty training and it is expected that these will be mapped to PEM sub-specialty training. During PEM sub-specialty training the EM trainee may revisit these capabilities under the supervision of a Paediatric Emergency Medicine lead trainer with the trainee seeing more complex and challenging cases, as well as covering new areas described in this PEM syllabus.

This syllabus contains 5 interlinked elements, as outlined in figure 1.

Elements of the Syllabus

The **Introductory Statement** sets the scene for what makes a Paediatric Emergency Medicine doctor.

The **Learning Outcomes** are stated at the beginning of each section.

**RCPCH** - These are the outcomes which the trainee must demonstrate they have met to be awarded their Certificate of Completion of Training (CCT) in Paediatrics. Progress towards achievement of the Learning Outcomes is reviewed annually at the Annual Review of Competence Progression (ARCP). Each Learning Outcome is mapped to the General Medical Council (GMC) Generic Professional Capabilities framework. Each trainee must achieve all the Generic Professional Capabilities to meet the minimum regulatory standards for satisfactory completion of training.

**RCEM** - These are the outcomes which the trainee must demonstrate they have met to be awarded additional Certificate of Completion of Training (CCT) in Paediatric Emergency Medicine Sub-Specialty. Progress towards achievement of the Learning Outcomes is reviewed at the Annual Review of Competence Progression (ARCP).

The **Key Capabilities** are mandatory capabilities which must be evidenced by the trainee, in their ePortfolio, to meet the Learning Outcome.

The **Illustrations** are examples of evidence and give the range of clinical contexts that the trainee may use to support their achievement of the Key Capabilities. These are intended to provide a prompt to the trainee and trainer as to how the overall outcomes might be achieved. They are not intended to be exhaustive, and excellent trainees may produce a broader portfolio or include evidence that demonstrates deeper learning. It is not expected that trainees provide ePortfolio evidence against every individual illustration (or a set quota); the aim of assessment is to provide evidence against every Key Capability.

The **Assessment Grid** indicates suggested assessment methods, which may be used to demonstrate the Key Capabilities. Trainees may use differing assessment methods to demonstrate each capability (as indicated in each Assessment Grid), but there must be evidence of the trainee having achieved all Key Capabilities.
Using the Syllabus with ePortfolio

Recording evidence in the ePortfolio to demonstrate progression against the learning outcomes and key capabilities can be done from any assessment or event in the ePortfolio.

At the end of any event or assessment, there is an opportunity to add tags, documents and comments. Expanding this by clicking “show more” will enable you to link your assessment to the curriculum items, where you will find the learning outcomes for each domain, key capabilities and supplementary capabilities.

Trainees would be able to track their progress in fulfilling the mandatory learning outcomes and key capabilities.

Paediatric Emergency Medicine
Introductory Statement

A Paediatric Emergency Physician is a doctor who specialises in the initial management of children of all ages presenting with a wide range of undifferentiated conditions. They need to make pragmatic and rapid decisions using a wide breadth of knowledge across a vast range of paediatric presentations.

They need to be adaptable in order to be able to switch immediately from managing minor conditions to leading the resuscitation of children. They are equally at home dealing with minor and major trauma, and minor and serious illness, as well as the worried well.

Paediatric Emergency Physicians must also acquire a wide range of non-clinical skills and abilities, both inward and outward looking. These may revolve around process management, either in the Emergency Department (ED), the hospital as a whole, or the wider community and interfaces of care. They must also learn to take care of themselves and the emergency team, developing skills to counteract the high-pressure nature of the workload through, for example, communication, debriefing, and resilience training.

They gain their skills by working in busy Paediatric Emergency Departments (PEDs), Paediatric Intensive Care Units (PICUs), and alongside colleagues from other specialties including emergency medicine, paediatrics, general paediatric surgery and other surgical specialties, mastering both the diagnostic challenge and the practical skills required to treat this diverse population. As consultants, Paediatric Emergency Physicians may work in designated PEDs or alongside adult colleagues, taking on the care of children in mixed EDs.

Sub-specialty Learning Outcome 1

Recognises, assesses and manages the full range of paediatric emergency conditions. 

GPC 1, 3, 5, 6

Key Capabilities

- Manages the critically ill neonate, child and young person. GPC 1, 2, 3, 5, 6
- Assesses and manages the patient in respiratory failure. GPC 1, 2, 3, 5, 6
- Assesses and effectively manages the septic or shocked patient. GPC 1, 2, 3, 5, 6
- Assesses and manages the patient with a cardiac disorder. GPC 1, 2, 3, 5, 6
- Assesses and manages the patient presenting with a reduced level of consciousness. GPC 1, 2, 3, 5, 6
- Assesses, diagnoses and manages the patient presenting to the PED with major or minor trauma. GPC 1, 2, 3, 5, 6
- Identifies and manages acute mental health conditions in the PED. GPC 1, 2, 3, 5, 6
- Assesses and manages presentations that suggest physical or psychological abuse. GPC 1, 2, 3, 5, 6
- Manages the processes following an unexpected death in the PED. GPC 1, 2, 3, 5, 6
Illustrations

**Demonstrates knowledge of the PED management of:**

1. Upper airway obstruction.
2. Allergic conditions and anaphylaxis.
3. Respiratory failure, in particular related to acute asthma, pneumonia and bronchiolitis.
4. Sepsis, the systemic inflammatory response, and shock.
5. Hypotension and heart failure.
7. Cardiac arrhythmias.
8. Myocarditis.
10. Syncope.
11. Acute neurological emergencies, including status epilepticus.
12. Febrile and non-febrile seizures.
13. Raised intracranial pressure and reduced level of consciousness.
15. The neurosurgical patient.
17. Hypoglycaemia.
18. Metabolic disease.
19. Endocrine abnormalities.
21. Minor and severe infections.
22. Upper respiratory tract infection (URTI) and lower respiratory tract infection (LRTI), gastroenteritis.
23. Non-blanching rash.
24. Kawasaki disease.
25. Upper and lower urinary tract infections.
27. Abdominal pain including surgical and non-surgical causes, and functional abdominal pain.
29. Bilious vomiting.
30. Gastrointestinal bleeding.
31. Inflammatory bowel disease.
32. Common and emergency gynaecological presentations.
33. Sexually transmitted diseases.
34. Patients seeking emergency contraception.
35. Life-threatening ENT emergencies, e.g. quinsy and post-tonsillectomy bleeding.
36. Common ear, nose and throat (ENT) disorders, e.g. otitis media, nasal injuries, epistaxis and removal of foreign bodies.
37. Common oral and dental injuries and emergencies.
38. Common and emergency ophthalmological presentations.
40. Bites and infestations.
41. The limping child.
42. Rheumatological and non-traumatic musculoskeletal presentations.
43. Acute and chronic pain.
44. Oncological conditions, including making an initial assessment and diagnosis, and managing complications related to the disease process or its treatment.
45. Haematological disorders, e.g. sickle cell disease.
46. Immunodeficient states.
47. Delirium and psychosis.
48. Self-harm.
49. Poisoning, accidental drug ingestion and overdose.
50. Hypothermia and hyperthermia.
51. Electrolyte abnormalities.
52. Needlestick injuries.
Management of the injured child:

1. Anticipates injury patterns in common trauma presentations in each age group.

2. Demonstrates knowledge of the PED management of:
   - The child with polytrauma and potential major trauma
   - Bleeding disorders in trauma, and is able to recognise and manage massive haemorrhage
   - Chest trauma, and is able to perform and facilitate key chest procedures, e.g. chest drain insertion
   - Abdominal and pelvic trauma, including the application of pelvic binders
   - Acute head and spinal injury, including spinal cord injury
   - Acute drowning and immersion injury
   - Acute burn injuries (including electrical burns), and subsequent complications
   - All limb-threatening injuries, including open fractures, and is able to reduce injuries compromising nerve or vascular supply
   - All fractures and ligamentous injuries
   - A dislocated joint, and is able to reduce the joint and manage the onward referral
   - All lacerations and open wounds
   - Rhabdomyolysis and compartment syndrome

Safeguarding within the PED:

1. Demonstrates an understanding of presentation patterns which suggest physical or psychological abuse, is able to stratify risk, and engages with allied professionals in accordance with national and local policies and guidance.

2. Demonstrates an understanding of how societal issues, such as sex trafficking, involvement with gang culture and female genital mutilation (FGM) may impact on children presenting to the PED.

3. Manages children sensitively where sexual assault and child sexual abuse is suspected.

Mental health:

1. Performs a mental health assessment relevant to PED care.

2. Risk-stratifies children attending the PED with acute mental health issues to identify those who require admission or urgent intervention.

Sub-specialty Learning Outcome 2

Assumes the role of paediatric emergency team leader and takes responsibility for this domain of service. GPC 3, 5

Key Capabilities

Leads a multispecialty trauma team. GPC 3, 5

Illustrations

1. Leads a resuscitation team.

2. Assembles and effectively prepares a multispecialty team prior to the arrival of a critically unwell or injured child.

3. Understands the prognostic factors in resuscitation episodes, including situations when extracorporeal life support may be appropriate.

4. Organises and leads a team to support an unexpected birth in the PED to ensure the safety of the mother and baby.

5. Takes decisions in circumstances which present ethical issues and knows when to cease resuscitation.

6. Provides or signposts staff to psychological support in response to acute events or system pressures.

7. Signposts families to sources of psychological support after traumatic events which may have precipitated the ED visit, and demonstrates ability to follow the principles of psychological first aid.
Sub-specialty Learning Outcome 3

Performs high-level clinical and technical skills and procedures in the paediatric emergency setting.

Key Capabilities

Demonstrates the clinical knowledge necessary to manage the range of problems seen in the PED.

Employs the technical skills required to manage patients in the PED.

Illustrations

1. Uses a range of techniques, including simulation, to guide and support learning within the PED.
3. Appropriately uses and interprets invasive and non-invasive physiological monitoring.
4. Interprets the significance of changes in physiological parameters in the critically unwell patient, and intervenes accordingly.
5. Obtains vascular access and manages the complications.
6. Interprets results of acid-base physiology in the clinical context, and provides interventions where necessary.
7. Provides adequate analgesia using different agents and administration routes.
8. Demonstrates an understanding of distraction techniques and their use in facilitating examination and the performance of procedures.
9. Delivers local anaesthesia at discrete sites e.g. for wound repair and for nerve blocks using a range of agents.
10. Delivers safe, appropriate procedural sedation to the child of any age in the PED for a range of procedures, and by using a variety of sedation agents.
11. Demonstrates an understanding of appropriate pharmacological agents for use in the induction of anaesthesia.
12. Demonstrates an understanding of the management, including sedation, of the child intubated in the PED.
13. Follows age-appropriate algorithms for obstructed or difficult airways, including the indications and techniques for performing a surgical airway.
14. Initiates and uses non-invasive respiratory support, and applies appropriate ventilatory strategies.
15. Manages traumatic and spontaneous pneumothoraces, and understands the indications and techniques for drainage, including needle aspiration and chest drain placement.
16. Applies appropriate techniques to maintaining adequate cerebral perfusion.
17. Uses vasoactive drugs appropriately and is aware of their potential complications.
18. Utilises neuroimaging appropriately in the PED environment.
19. Selects and interprets the appropriate imaging modality and body area for patients following trauma.
20. Uses point-of-care ultrasound as a diagnostic aid in the ED for specified conditions, e.g. pneumothorax, cardiac standstill and foreign body detection.
21. Uses point-of-care ultrasound for ultrasound-assisted and ultrasound-guided procedures, e.g. femoral nerve block or vascular access.
Sub-specialty Learning Outcome 4

Liaises effectively with hospital and community specialist paediatric emergency medicine (PEM) teams.  

Key Capabilities

Manages a PEM department and its interactions with the hospital and community.

Illustrations

1. Interfaces effectively with all affiliated services including paramedic and pre-hospital, general paediatric, and inpatient specialty teams.
2. Safely transports the acutely unwell child within the hospital, and facilitates transport between hospitals where necessary.
3. Interfaces effectively with general practice and community care.
4. Provides both written and verbal safety-netting advice to families for all conditions amenable to discharge from the ED.
5. Understands the roles of other professionals, agencies and the voluntary sector in the management of a child’s or young person’s mental health.
6. Understands how young people transition from paediatric to adult services and how this may impact on acute presentations to the PED.
7. Understands the legal process if faced with objections from patients or carers to the use of blood products.
8. Facilitates organ donation as a part of end-of-life care, including the referral to donation services.
9. Manages the processes that take place after an unexpected death, including investigations, involvement of other healthcare professionals, and engagement with other agencies, e.g. the coronial officer, police, and child death overview panel.

Sub-specialty Learning Outcome 5

Effectively manages and coordinates patient flow, staffing, safety and quality in a PED.

Key Capabilities

Recognises ED crowding, and implements effective strategies to relieve it as quickly as possible while maintaining safety and quality of care.

Illustrations

1. Demonstrates an understanding of acuity scoring and triage systems.
2. Recognises and responds to potential or real threats to patient safety in the PED.
3. Manages conflict with staff and families.
4. Understands the importance and impact of human factors on the care of the acutely unwell child in the PED.
5. Recognises the importance of, and has an understanding of the techniques involved with quality improvement and audit in the ED setting to effectively improve care.
6. Recognises the potential impact of existing and emerging online technology for engagement and communication, including social media, and employs professional boundaries for its use.
Sub-specialty Learning Outcome 6

Demonstrates the ability to make pragmatic and rapid decisions across a broad range of paediatric emergencies.

**Key Capabilities**

Leads and manages a paediatric emergency.

**Illustrations**

1. Provides leadership in hot or cold debrief episodes and supports the PED team after a significant event, Major Incident or resuscitation.
2. Uses national policy and targets for quality and safety of care in PEM.
3. Undertakes appropriate roles within a Major Incident response as laid out in local and national policies.
4. Demonstrates understanding of the management of all forms of Major Incidents, including chemical, biological, radiological and nuclear (CBRN) and those with mass casualties.

**Assessment Grid**

This table suggests assessment tools which may be used to assess the Key Capabilities for these Learning Outcomes. This is not an exhaustive list, and trainees are permitted to use other methods within the RCPCH Assessment Strategy to demonstrate achievement of the Learning Outcome, where they can demonstrate these are suitable.
