How the national training survey helps to improve medical training – an overview

NATIONAL TRAINING SURVEY OPENS ON 24 MARCH

DOCTORS IN TRAINING TAKE THE SURVEY
Over 53,000 doctors around the UK take part.

LOCAL EDUCATION PROVIDERS
investigate results and try to resolve issues locally and report to deaneries/LETBs, about issues identified.

DEANERIES AND LETBS
They ask local education providers to report on action taken and then report to GMC (unless resolved locally).

RESULTS ARE IN
GMC publishes results online. During the survey we also share comments on bullying and patient safety concerns with deaneries and LETBs to ensure their quick review.

ROYAL COLLEGES AND FACULTIES
analyse the results to find how their curricula are being delivered and make changes to them if needed, and then report issues to the GMC in annual specialty reports.

GENERAL MEDICAL COUNCIL
reviews survey results along with other data to identify areas of risk. This helps us to decide where to visit for quality assurance and helps inform decisions on whether issues being monitored have been addressed or need further intervention.

DEANERIES AND LETBS
review their results to identify areas of risk and decide where to visit.

NATIONAL TRAINING SURVEY 2016 OPENS
GMC develops new questions based on current survey results. We also check progress on issues identified in 2015 in the 2016 survey.

GENERAL MEDICAL COUNCIL
reviews survey results along with other data to identify areas of risk. This helps us to decide where to visit for quality assurance and helps inform decisions on whether issues being monitored have been addressed or need further intervention.

LOCAL EDUCATION PROVIDERS
investigate results and try to resolve issues locally and report to deaneries/LETBs, about issues identified.
