

Medical Licensing Assessment (MLA)

Applied knowledge test (AKT) - GMC's compliance decision

Keele University School of Medicine

This document records the General Medical Council's (GMC) decision* on whether an assessment provider† is compliant by meeting the applied knowledge test (AKT) requirements annexed to the GMC's MLA framework: [Assuring readiness for practice: a framework for the MLA](#).

Assessment provider	Keele University School of Medicine
GMC's decision	Compliant with the AKT requirements
Date of decision	11 June 2024

Legislation and guidance

The Medical Act 1983, as amended, gives the GMC the function of promoting high standards in, and co-ordinating all stages of, medical education. The Act requires‡ the GMC to:

- determine the extent of the knowledge and skill required to obtain a primary UK qualification (PMQ) and secure that the instruction given is sufficient to equip candidates with that knowledge and skill, and
- determine the standard of proficiency required from candidates during examinations leading to a UK PMQ and secure the maintenance of that standard.

[Assuring readiness for practice: a framework for the MLA[§] \(the MLA framework\)](#) was first published in March 2021 and updated and reissued in November 2023. The MLA framework requires that, from the academic year 2024-25, a medical degree awarded by a UK university on the GMC's list of awarding bodies (the list) must include a pass in the MLA to be recognised as a PMQ.

The MLA framework stipulates that, from 1 May 2024, for a university to be able to be included

* The decision is made by a GMC Assistant Registrar, under delegated authority from the Registrar to act as an MLA decision maker.

† Assessment provider: either a UK awarding body offering a primary medical qualification (PMQ) or the GMC as a provider of the MLA to international medical graduates.

‡ Sections 5(2)(a) and (b).

§ Issued by the Registrar under his powers set out in sections 5(2)(a) and (b) of the Act.

in the list:

- medical degree programmes leading to a medical degree awarded from academic year 2024/25 must include the MLA
- the MLA must have two parts – an applied knowledge test (AKT) and a clinical professional skills assessment (CPSA)
- each AKT must meet our AKT requirements
- each CPSA must meet our CPSA requirements
- the content of all AKTs and CPSAs must derive from the *MLA content map* and
- medical degree programmes must meet the GMC’s published standards, requirements and outcomes relating to undergraduate medical education and training.

The AKT requirements, CPSA requirements and MLA content map are annexed to the MLA framework.

Compliance with the requirements must be maintained in order for an assessment provider’s AKT and CPSA to count towards a candidate’s MLA.

Context

In June 2021, GMC Council approved the proposal for a collaboration between UK medical schools and the Medical Schools Council (MSC) to cooperate to set and deliver a GMC regulated national assessment of applied knowledge to meet the requirements of the MLA framework – the MS AKT. The MS AKT was proposed as a centrally created, locally administered AKT for all students graduating from UK medical schools from academic year 2024/25.

This report identifies whether the assessment provider meets the AKT requirements through the MS AKT.

Compliance process

Whilst each medical school is individually responsible for meeting the AKT requirements, there are elements of the MS AKT that are being centrally co-ordinated by the MSC. As a consequence, the MSC provided submissions and evidence on behalf of all medical schools (‘the central submissions’) about how the central elements of the MS AKT meet the AKT requirements.

Each medical school provided submissions and evidence (‘the local submissions’) seeking to demonstrate how the MS AKT delivered to their students meets the AKT requirements.

Where required, independent expert assessment advice was sought from the GMC’s AKT advisers* to inform the GMC’s review and consideration of the central submissions and/or the

* GMC associates appointed following an open recruitment campaign for their expertise, experience, and credibility in relation to assessment and a lay associate to provide public and patient perspective. All associates undertook bespoke Equality, Diversity, and Inclusion (ED&I) training at the GMC before starting their role. Checks were completed for any conflicts of interest.

GMC requested further information and clarifications from MSC or the medical school. These requests were to obtain the evidence necessary to finalise the GMC’s considerations and were not an indication of whether or not the assessment provider was considered to have met the AKT requirements.

Annex A is a copy of the compliance report containing details of the GMC’s consideration of the submissions and evidence provided by, or on behalf of, Keele University School of Medicine. The assessment provider was sent a draft of the compliance report to enable it to respond and to check for factual accuracies. Their response is also included at Annex A.

In addition to setting out the reasons for a decision as to whether the assessment provider has met each requirement, the compliance report also details recommended changes to the assessment provider’s AKT, future action required and further information that should be provided in the next submission.

Decision

GMC MLA decision maker’s decision and reasons for decision

Documents considered in reaching decision

In reaching my decision I have considered the following documents:

- The local submissions - the assessment provider’s submission and supporting evidence
- The central submissions – the submissions and supporting evidence provided by the MSC on behalf of all medical schools
- [Guidance to assessment providers on creating a submission against the AKT requirements](#), which also contains the AKT requirements
- MLA AKT assessment – guidance for MLA decision makers.

Decision

As set out in the compliance report I am satisfied that Keele University School of Medicine (the assessment provider) was compliant with and met the AKT requirements annexed to the GMC’s MLA framework: [Assuring readiness for practice: a framework for the MLA](#) by 1 May 2024.

I make recommendations to the assessment provider, set out in the recommendation section below and for the reasons detailed in the compliance report.

I am NOT making any recommendations to the assessment provider for the reasons detailed in the compliance report.

I advise the assessment provider to make [add number] mandatory changes in order to be compliant with and meet the AKT requirements. I am satisfied that Keele University School of Medicine (the assessment provider) will be compliant with and meet the AKT requirements annexed to the GMC’s MLA framework: [Assuring readiness for practice: a framework for the MLA](#)

subject to implementing the mandatory changes listed below by 1 May 2024. If it is not possible to implement the changes then this should be escalated to the Registrar.

Based on the detail set out in the compliance report, I have formed a provisional opinion that Keele University School of Medicine (the assessment provider) is not compliant and does not meet the AKT requirements annexed to the GMC's MLA framework: [Assuring readiness for practice: a framework for the MLA](#). I am escalating this to the Registrar for further consideration.

Mandatory changes

None

Recommendations

Requirement 14 (central submissions): Consideration should be given to putting a process into place for monitoring emerging threats and exploits to the software deployed to secure the exam system and item bank e.g. secure browsers.

Requirement 16 (central submissions): Plans to update the invigilator guidance following the pilots should be pursued to include guidance on minimum standards, numbers and training for invigilators of the AKT to support standardisation and minimise the risk of variability.

Requirement 22 (central submissions): Consideration should be given to increasing the breadth of different perspectives within the AKT operational groups and governance structure to reflect the stakeholder environment of the AKT and its role as a requirement for a PMQ and progression to the medical register.

Reasons for the decision

My decision, including the recommendations I make above, is based on the detailed reasons I have set out in the annexed compliance report, and informed by my review of the evidence and information received through the compliance process set out and followed above.

The assessment provider has been given an opportunity to respond and to highlight any factual inaccuracies on a draft of my report and I have taken into account their response in finalising my decision.

Signed

Judith Chrystie, Assistant Registrar

Date

11 June 2024

Annex A

Medical Licensing Assessment (MLA)

Applied knowledge test (AKT) - GMC's compliance report

Keele University School of Medicine

Medical Licensing Assessment (MLA)

Applied knowledge test (AKT) - GMC's compliance report

Keele University School of Medicine

This compliance report contains the reasons for the decision that - following a review of the information and evidence submitted by, and on behalf of, Keele University School of Medicine (the assessment provider*) - the assessment provider complies with and meets the AKT requirements annexed to the General Medical Council's (GMC) MLA framework: [Assuring readiness for practice: a framework for the MLA](#).

By meeting these requirements, an assessment provider is demonstrating the quality, consistency and fairness of their AKT to a standard that the GMC requires for the AKT to count towards a candidate's MLA.

The full report constitutes the reasoning for the GMC Assistant Registrar (AR) compliance decision and will be published on the GMC website, along with the compliance record of decision[†].

* Assessment provider: either a UK awarding body offering a primary medical qualification (PMQ), or the GMC as a provider of the MLA to international medical graduates.

[†] Any factual inaccuracies identified by the assessment provider will be addressed and rectified prior to the decision being made and published.

Overview

Overall statement

I consider that Keele University School of Medicine (the assessment provider) meets the AKT requirements annexed to the GMC's MLA framework: [*Assuring readiness for practice: a framework for the MLA*](#).

While not impacting on the overall conclusion that the assessment provider meets the AKT requirements, a number of recommendations and requests for further information have been made. Some of these relate to the central elements and others are specific to this assessment provider.

Recognising that the submissions and evidence were prepared in anticipation of the live delivery of the MS AKT later this year, the collective submissions and local submission were reviewed acknowledging that they identify what the assessment provider intends and plans for its MS AKT, and recognising that piloting and the initial summative sittings of the test are likely to prompt changes and adaptations to the design or delivery of the MS AKT. The assessment provider will need to report on any changes as part of ongoing quality assurance of the MS AKT. In particular, the assessment provider should consider the following points:

Keeping the GMC updated: As or when further changes to reflect the introduction of the MS AKT are made – for example to assessment strategies, student familiarisation, venues, invigilator guidance materials, processes for release of results, processes around missing data – updates should be provided to the GMC as part of the next submission.

National policy framework: As detailed in the central submissions, there is a policy framework which all medical schools have collaboratively developed to support the delivery of the MS AKT within medical schools. This will, understandably, need to adapt to the university regulations applicable to each school, but the GMC would welcome hearing of the efforts to continue to progress the ambition for a common policy framework to underpin the development and delivery of the MS AKT, as set out in the collaborative proposal approved by GMC Council in June 2021*. The GMC should be kept updated on how the assessment provider's suite of local policies and procedures align with the national policy framework, including any changes made locally to reflect the introduction of the national MS AKT – including as part of the next submission.

Exam security and contingency planning: The GMC is having conversations with each medical school about exam security and contingency planning, and is keen to continue working on this with schools and the MSC. In addition to these discussions, the assessment provider should let the GMC know about

* Under section 4(4) of the Medical Act 1983

any updates or issues arising as part of the next submission.

These points, and the considerations and conclusions that follow in this report, are based solely on a review of the written information and evidence submitted by the assessment provider and by the MSC on behalf of all medical schools. This includes any clarifications or further information requested as part of that process and the assessment provider's response to a draft of the compliance report which was shared with them prior to the final decision being made.

Individual AKT requirements

1	<p>Assessment strategy</p> <p><i>The AKT is one of the elements through which passing candidates demonstrate to the GMC their eligibility to join the medical register.</i></p> <p>Describe and demonstrate how the AKT sits within the overall assessment strategy.</p>
Met?	<p>Yes</p> <p>Through its local submission the assessment provider has appropriately described and demonstrated how the AKT sits within the overall assessment strategy for the final and penultimate years of its medical degree (leading to a UKPMQ), showing the progression points and eligibility criteria for the AKT.</p>
Central submissions	
N/A	
Local submission	
<p>The assessment provider has explained that its MBChB programme is based upon the principles of programmatic and cumulative assessment and is structured into three phases: Phase 1 (Years 1 and 2), Phase 2 (Years 3 and 4) and Phase 3 (Year 5, which is a 30-week clinical assistantship). To progress, students must satisfy the assessment requirements for each academic year and the assessment provider uses the cumulative data from each assessment to determine progression. Assessments increase in complexity in line with the knowledge and skills acquired by students throughout the course and feedback is given after each assessment.</p> <p>The assessment provider is adopting the MS AKT as its final test of applied knowledge. The AKT will be sat in the penultimate year of the programme at the end of part of Phase 2 and must be passed to move into the Phase 3 of the programme.</p> <p>The assessment provider aims that by placing the AKT in the penultimate year students are able to enter the Phase 3 of the course with the skills and knowledge to equip them to be better prepared for their final year clinical assistantships and, subsequently, the foundation programme. The AKT is</p>	

complemented by the other assessment in Phase 2, which includes clinical skills and workplace-based assessments.

The assessment provider has shown how the AKT fits within the suite of assessments used for graduation, with clear information on progression requirements.

2	AKT design <i>The design of the AKT must enable effective assessment of the learning outcomes required to demonstrate professional medical knowledge as applied to the care of patients, at the level expected of a doctor ready for safe practice at the relevant point of registration.</i> Describe the rationale for the design of the AKT.
Met?	Yes Through the central submissions, the assessment provider has sufficiently described the rationale for the design of the AKT and demonstrated that this will enable effective assessment of the learning outcomes required to demonstrate professional medical knowledge as applied to the care of patients, at the level expected of a doctor ready for safe practice with provisional registration.

Central submissions

The MS AKT exam consists of two computer-delivered papers of 100 single best answer (SBA) items (questions) each. All exams in an assessment cycle (a single academic year) contain items known as common content items.

The papers are taken on consecutive days. Each paper lasts two hours. The rationale for the MS AKT design is that it is familiar to medical schools and SBA items have been shared by medical schools through the Medical Schools Council Assessment Alliance (MSCAA) for a number of years. The timing for each item was derived from a survey of all participating medical schools of the time they allowed for knowledge tests in finals exams, 72 seconds being the median.

To pass the MS AKT, candidates must meet or exceed the pass score across the two papers. The passing standard is set at that of a week 1 Foundation Year 1 (F1) doctor, which is the standard that is appropriate to the point of registration for which it is designed – namely, a national standard for provisional registration for all UK students. The standard is set centrally by the MSC’s Standard Setting Group using the Angoff method, which is the

most commonly used method in UK medical knowledge tests. Further information on how scoring works is outlined under requirement 3 (Scoring), and how the standard is set under requirements 4 and 5 (Standard setting).

Candidates take the MS AKT using the MSC-provided exam delivery platform, with the papers being supplied centrally by the MSC.

Following feedback from the GMC’s AKT advisers, high-level information was provided in the central submissions about the piloting and how this has informed the design – for example, the overall pass rate from the first round of piloting was around 92%, which is in line with expectations based on pass rates at finals. With a further round of piloting having been undertaken and the live AKT for penultimate year assessment providers in June 2024, additional insight will be obtained to confirm, or otherwise, the design of the MS AKT. It is recognised that the MS AKT follows a standard design approach and therefore major design changes are unlikely. However, elements which support the design may still evolve. These elements are identified in the following requirements.

While the modelling supplied to date to support the design is high level, much of the evidence for the design of the MS AKT draws on the previous work of the MSCAA and the assessment provider’s own experiences of knowledge testing and, through the central submissions, the assessment provider has sufficiently described the rationale for the design of the MS AKT to meet the requirement. This includes how the design enables effective assessment of the learning outcomes required to demonstrate professional medical knowledge as applied to the care of patients at the level expected of a doctor ready for safe practice at the relevant point of registration.

3	<p>Scoring</p> <p><i>The scoring approach must enable fair and consistent pass/fail decisions on candidate performance.</i></p> <p>Describe the approach to scoring candidate performance at item level and overall, including any score conversions and rounding protocols.</p>
Met?	Yes

	Through the central submissions, the assessment provider has sufficiently described the approach to scoring candidate performance at item level and overall to meet the requirement. The scoring approach will enable fair and consistent pass/fail decisions on candidate performance.
Central submissions	
<p>Each paper has 100 items, each worth one mark, meaning that there are 200 marks available in total in the MS AKT. A candidate's score on the MS AKT is the sum of the total number of correct responses across the two papers. Each score is a whole number, with a maximum achievable score of 200. Scores are not converted to percentages, or other types of scores, and, as such, there is no requirement for the assessment provider to have a policy, or protocol, for rounding scores to the nearest integer (as could be the case if percentage scores were used).</p> <p>Scores are automatically generated. This ensures that the calculations (the summing of scores across the two papers) will not be subject to human error.</p>	
Local submission	
N/A	
4	<p>Standard setting</p> <p><i>The AKT must be set at a standard that is appropriate to the point of registration for which it is designed (a national standard for provisional registration for all UK students, or a national standard for full registration for IMGs). The standard for the AKT must be created through the use of a recognised methodology and procedures. The standard setting processes must include a mechanism for maintaining a consistent level of challenge for each administration within a single year and over time.</i></p> <p>Describe and demonstrate how the national standard is determined, including input from stakeholders, piloting and review of outcomes.</p>
Met?	<p>Yes – with a point for future action</p> <p>Through the central submissions, the assessment provider has described and demonstrated how the national standard is determined,</p>

including input from stakeholders, piloting and review of outcomes.

Central submissions

As identified above (see requirement 2), the passing standard is set at that of a week 1 Foundation Year 1 (F1) doctor, which is the standard that is appropriate to the point of registration for which it is designed – namely a national standard for provisional registration for all UK students.

The development of the national standard for the MS AKT builds on a project which was commissioned by the MSCAA in 2010 and has involved increasing numbers of medical schools. This project introduced common questions into medical schools' finals-level knowledge-based assessments in order to provide data and feedback to medical schools about the comparability of standards nationally.

There are several strands of work related to creating the national standard for the MS AKT which are outlined in the submissions and are summarised here:

- 1) There is an 'anchor' statement which articulates the standard required for the MS AKT, the national standard. This is used as a reference point for all standard setting activity.
- 2) The work of creating the standard for each MS AKT (the pass mark for each paper) is led by a panel of medical school representatives, who oversee several standard setting groups with responsibility for making decisions about the standard of individual questions in a paper (also known as items).
- 3) There is a standard operating procedure (SOP) for standard setting.
- 4) Standard setters are required to complete training (onscreen and in person) before they can participate in standard setting.
- 5) The application of the national standard has been trialled during piloting of two MS AKT papers in the academic year 2021-22. This provided the opportunity for a test-run of the SOPs for creating papers and the standard, and to explore candidate results. The central submissions present the overall pass mark (92%) and further piloting will be conducted in the academic year 2023-24 which will offer further insight into the performance across papers. The timing means the outcomes of the pilot could not be included in the central submissions, but there is sufficient reassurance to see that the assessment provider – through the MSC – will be building on the learning from the earlier pilot.

In relation to stakeholder input beyond medical schools, the central submissions indicate that, in future, representatives of the UK Foundation Programme (UKFPO) will be included in the standard setting process. This is a welcome development.

The processes and resources referred to above will support the maintenance of a consistent standard. In addition, the standard setting panel will, with the support of two psychometricians (data analysts) analyse, review and monitor the performance of test items after the MS AKT papers have been taken by students, including common content items. The expectation is that this monitoring will provide further insight into how a consistent level of challenge is maintained across MS AKT papers.

Future action: In future quality assurance cycles, the assessment provider will need to confirm that the national standard is being created and applied consistently and that there is a consistent level of challenge for each administration within a single year and over time.

Local submission

N/A

5	<p>Standard setting</p> <p><i>The AKT must be set at a standard that is appropriate to the point of registration for which it is designed (a national standard for provisional registration for all UK students, or a national standard for full registration for IMGs). The standard for the AKT must be created through the use of a recognised methodology and procedures. The standard setting processes must include a mechanism for maintaining a consistent level of challenge for each administration within a single year and over time.</i></p> <p>Describe and demonstrate the underlying rationale for the chosen method and how the national standard is set and maintained, including any conjunctive standards.</p>
Met?	<p>Yes</p> <p>Through the central submissions, the assessment provider has described and demonstrated the underlying rationale for the chosen method and how the national standard is set and maintained, including any conjunctive standards (of which there are none at present).</p>

Central submissions

The standard is set using a method known as the Angoff method. This is a recognised and commonly used method for setting the pass marks for knowledge tests and is an appropriate method for setting the pass marks for MS AKT papers. The method uses the judgements of individual trained

raters, who are subject matter experts. Each rater makes a judgement about how many ‘borderline’ students would get each item correct (taking into account the difficulty or easiness of the item content).

The rationale for using the Angoff method is that it’s familiar to most assessment providers and was used in the common content project that fed into the development of the MS AKT.

There are no plans to apply conjunctive standard for the MS AKT, meaning that there are no additional requirements for candidates to meet, other than the overall pass mark. The AKT requirement does not necessitate a conjunctive standard however, as the MS AKT develops, the assessment provider, through the MSC, will wish to keep this under review.

The narrative for requirement 18 (Production of results) describes how a second standard setting method – known as the Hofstee method – will also be used as part of the post-test analysis to give additional assurance about the pass mark created using the Angoff method. The Hofstee method is also a recognised method and the submission states that it will be used when pass rates are markedly outside predicted parameters with reference to historical performance. It is noted as being unlikely to be used in favour of the Angoff pass mark.

The assessment provider – through the MSC – has described and demonstrated the underlying rationale for the chosen method and how the national standard is set and maintained. As with requirement 4, there are elements that will need to be monitored and, if necessary, refined as the MS AKT is run.

6

Sampling

The MLA content map is informed by Outcomes for graduates, the Foundation Programme training outcomes, the Generic professional capabilities framework and Good medical practice. All AKT content must be derived from the MLA content map, and the sampling criteria (the sampling grid and any further dimensions) must demonstrate how this is achieved and applied consistently in each test administration. The sampling criteria must be approved by the GMC.

Describe and demonstrate how the sampling approach aligns with the MLA content map, including the extent to which the sampling criteria reflect the three overarching themes and the individual domains of the content map.

	<p>a. Describe the rationale for the themes/ categories of the sampling grid, including the weightings/ proportions and any other factors that are applied to enable effective test construction and reporting.</p> <p>b. Describe the sampling criteria and demonstrate how these are used to create a technical algorithm for item selection that produces consistent and comparable tests.</p> <p>c. Describe how the sampling approach is reviewed and kept up to date to reflect updates to the MLA content map.</p>
Met?	<p>Yes - with a point for future action</p> <p>Through the central submissions, the assessment provider has described and demonstrated how the sampling approach aligns with the <i>MLA content map</i>.</p>

Central submissions

The central submissions explain the process by which the content of the MS AKT papers is selected and there is assurance that the MS AKT content relates to the themes and domains of the *MLA content map*.

An MS AKT sampling grid has been developed which specifies the proportion of items that must be selected from across different areas of clinical practice, applied knowledge, and care settings. The submission states that the views of stakeholders were sought to ensure that the approach to content sampling will produce MS AKT papers that reflect what newly qualified doctors will encounter in Foundation practice.

In order to automate the selection of items for each MS AKT paper, a computer exam construction algorithm has been created based on the 'rules' specified in the sampling grid (how many items per topic area etc.). This means that the selection of content for the first draft of each MS AKT paper is computer-generated. This process has been tested during the piloting phase, with ongoing monitoring and annual reviews planned. Annual reviews are to take place and will provide an opportunity to ensure that the sampling approach (the grid and algorithm) continues to be aligned to the *MLA content map*, which will be updated periodically to ensure it reflects day-to-day medical practice*.

A description and outline of the MS AKT sampling grid was approved as part of the collaborative proposal by GMC Council.

* The GMC plans to review the *MLA content map*, which was published in September 2019, and updated and reissued in March 2021, later in 2024.

Future action: Following the completion of piloting and any updates to the MLA content map following the GMC’s review in 2024/25, the sampling criteria and grid should be reviewed to ensure they remain aligned to the content map and any changes sent to the GMC for approval.

7	<p>Quality management</p> <p><i>The AKT question bank must be secure, current, of high quality and its content must be derived from the MLA content map. Test items must be developed, managed and reviewed through fair and effective processes.</i></p> <p>Describe and demonstrate how items are created, reviewed and quality assured in a consistent and timely manner.</p>
----------	---

Met?	<p>Yes</p> <p>Through the central submissions, the assessment provider has described and demonstrated how items for the AKT question bank are created, reviewed and quality assured in a consistent and timely manner.</p>
-------------	--

Central submissions

The central submissions detail the processes involved in creating, approving, evaluating, and maintaining quality items for the MS AKT, ensuring authenticity and appropriate challenge levels. Items are collaboratively created by a longstanding partnership of UK universities (as described at requirements 2 (Design) and 4 (Standard setting)), following an agreed style guide and peer review principles. Expert item writers (the MSC’s Item Writing Group) oversee item creation, growth of the item bank, and maintenance of quality, including style guide updates and recruitment/training of new writers.

Item writers, recruited from UK medical schools, undergo training that includes a ‘How to’ video, submission of sample items, attendance at an item review event, and a bespoke session on equality, diversity, and inclusion (ED&I). The assessment provider outlines steps for producing new items, involving review stages and using item performance analysis to inform revisions and guidelines.

Local submission	
N/A	
8	<p>Quality management</p> <p><i>Each test must be created through operationally effective test construction methodology supported by expert review and quality checking processes to ensure consistent application of the sampling criteria.</i></p> <p>Describe and demonstrate how tests are created, reviewed and quality assured in a consistent and timely manner.</p>
Met?	<p>Yes</p> <p>Though the central submissions, the assessment provider has described and demonstrated the processes to create quality tests that consistently reflect the sampling criteria.</p>
Central submissions	
<p>As described under requirement 6 (Sampling), the sampling criteria are used to create an exam construction algorithm to produce versions of the MS AKT automatically within the exam delivery platform. Papers are then manually checked by members of the MSC’s Exam Construction Group. This is a process largely designed to identify potentially problematic items that haven’t been picked up through quality assurance processes at other stages of test development, including item writing and standard setting.</p> <p>Within the central submissions it is stated that any differences in performance relating to which version of the paper was sat will be reviewed at post-assessment review and that performance of the algorithm that operationalises the sampling grid will be monitored on an annual basis.</p> <p>The assessment provider – through the central submissions – has described and demonstrated how tests are created, reviewed and quality assured.</p>	
Local submission	
N/A	

9	<p>Familiarisation</p> <p><i>Candidates must be given appropriate and timely information about the AKT, including: the test format, mode, testing time and sample content; arrangements for running the test on the day; and relevant local regulations.</i></p> <p>Describe and demonstrate how candidates have been familiarised with the AKT and how the AKT will be run on the day.</p>
Met?	<p>Yes</p> <p>Through both the central submissions and the local submission, the assessment provider has described and demonstrated how candidates are familiarised with the AKT and how it will be run on the day. This includes information about the test format, mode, testing time and sample content, arrangements for running the test on the day, and relevant local regulations.</p> <p>The assessment provider has shown how they provide appropriate and timely information to candidates to prepare them to take the AKT and inform them of what to expect.</p>
<p>Central submissions</p>	
<p>The central submissions set out how candidates are familiarised with the format and expectations using webinars, FAQs available on the MSC website, a candidate guide and two kinds of practice papers. Four 50 item practice papers on the exam delivery platform are available to help candidates familiarise themselves with the platform. These papers consist of previously used items which are not necessarily mapped to the <i>MLA content map</i> but are similar in style and format.</p> <p>In addition, the MSC hosts a 200 item exam on its website, consisting of two 100 item papers, constructed according to the exam construction procedure outlined in requirement 6 (Sampling). Unlike the 50 item papers, the 200 item exam is mapped to the <i>MLA content map</i>. It is not standard set but reflects a similar level of difficulty to the live MS AKT.</p>	
<p>Local submission</p>	
<p>The assessment provider has a comprehensive package of activities and processes in place at a local level to familiarise students with the AKT. Students are introduced to the MLA format in the Phase 1 of the programme. There are plenary sessions delivered in Phase 2, including a series of</p>	

workshops and a 200 item formative AKT (2 x 100 item papers each of two hours) in January of Year 4. Teaching leads also include aspects of AKT preparation in small group teaching sessions, and separate 'drop-in' sessions are held for students to discuss sample AKT style questions in relation to different specialties.

In addition to the assessment provider's own formative assessments and resources, the assessment provider facilitates full access to the practice materials developed by the MSC and these are signposted during AKT/MLA briefings.

Students are also familiarised with the AKT through the assessment provider's local governance processes. Key committees at which the MLA is discussed include student representation, and through the Staff Student Voice Committee, students are able to collaborate with staff on any concerns.

All knowledge testing in each year of the MBChB programme are electronically delivered SBA assessments on same the exam delivery platform as that used for MS AKT. As a consequence, students gain significant experience of using the platform prior to sitting the MS AKT.

The assessment provider's format for assessments throughout the programme also helps prepare students for the AKT. A 'house style', which reflects that used by MSC, is used from the beginning of the programme and all years feature questions from the national question bank. This gives students significant experience in the format of the AKT before they sit it.

Candidates are notified of their assigned seat within their allocated venue about a fortnight before an assessment. Written Instructions are given to students about which should be brought on the day of the exam. An example reporting instructions email was supplied.

10	<p>Results and feedback</p> <p><i>Timely and appropriately detailed feedback must be provided to individuals with their AKT results to enable unsuccessful candidates to identify and target specific areas of development prior to their next attempt or to enable successful candidates to reflect on their performance.</i></p> <p>Demonstrate what results and feedback are given to candidates, as well as what support is available to unsuccessful candidates.</p>
Met?	<p>Yes – with further information to be provided at the next submission</p> <p>Through both the central submissions and the local submission, the assessment provider has described and demonstrated what results and feedback are generated to be given to candidates.</p>

The assessment provider has described the information and support they give to candidates about their results and performance.

Central submissions

The central submissions explain that the central MS AKT Exam Board will share individual candidate scores (by area of clinical practice and area of applied knowledge, alongside their overall numerical score), pass/fail result and the pass mark for the exam, with the assessment provider. This will allow the assessment provider's own exam board to review the results alongside other finals assessments. The assessment provider won't be able to make changes to the MS AKT results at their exam board because the standard is set nationally. Following the assessment provider's exam board, the results will be released to the candidates by the medical school at a time agreed with the assessment provider.

All candidates, whether they've passed or failed, will receive the same level of feedback directly through the exam delivery platform from the MSC on behalf of the assessment provider.

The central submissions also provide a description of the quality assurance steps taken to ensure that each candidate receives the correct results.

The level of feedback is designed to give the candidate sufficient information to permit remediation from the assessment provider, while minimising the risk to item and exam security.

Local submission

The assessment provider has stated that providing feedback is viewed as a core component of student learning. The assessment provider has set out how students are provided with personalised and targeted feedback after assessment throughout the programme to allow reflection on performance. This includes completion of a self-reflection form (an example from Phase 1 was submitted by the assessment provider). There are meetings with students to focus on study techniques and other potential issues which may be affecting performance.

Candidates are also familiarised with the method used to deliver feedback on the AKT throughout the programme, as all feedback for knowledge assessments is delivered through the exam platform used to deliver the MS AKT.

The assessment provider has advised that for MS AKT, students will receive their score/feedback as described in the central submissions. Students will receive a numerical score, outcome and feedback on their performance. Unsuccessful candidates will have the opportunity to meet with Year Leads and members of the Assessment Team to discuss their feedback.

The assessment provider has explained that the time that the results are released via the exam platform will be agreed with the MSC to ensure that the timing co-ordinates with the release of Examination Board outcome letters, an example of which was provided. The example letter provided appropriate links to information but the assessment has also confirmed that it will ensure that the range of support pathways that its students can access, depending on their performance in the assessment, will be summarised in the outcome letters.

Next submission: The assessment provider should provide an update that it has included additional information in the Examination Board outcome letters to explain where students can find support to discuss their results.

11	<p>Policies and procedures</p> <p><i>The AKT must be supported by policies and procedures for conduct and administration embedding fairness and ED&I principles for reasonable adjustments, mitigating circumstances, number of attempts or resits, exam misconduct, complaints and appeals. The policies and procedures must be approved by the GMC.</i></p> <p>Demonstrate and describe that there are policies and procedures in place to ensure a fair and comparable test experience for candidates.</p>
Met?	<p>Yes – with further information to be provided at the next submission</p> <p>Through both the central submissions and the local submission, the assessment provider has described how policies and procedures operate at a local level.</p>

Central submissions

The central submissions described how the MS AKT could operate within the context of a policy framework and that these policies and procedures ensure a fair and comparable test experience within the context of a centrally designed assessment delivered locally at universities with individual sets of policies.

Through the central submissions, the policy framework has been provided. The central submission states that this is the policy framework that all medical schools have collaboratively developed to support the delivery of the MS AKT within medical schools. There will currently be local variation on

how the policy framework is applied: the national policy framework will need to adapt to the university regulations applicable to each school. The policy framework covers:

- Number of attempts
- Appeals and complaints
- Mitigating circumstances
- Reasonable adjustments
- Exam misconduct

The policy framework has been developed with a view to providing an overarching framework that will contribute to the comparability of candidate experience between medical schools, drive up consistency of candidate experience across schools, and provide candidates with a framework within which they can demonstrate they meet the standard of proficiency.

Concerns were raised by some AKT advisers about variations in policies, such as in relation to the number of attempts. However, the GMC has approved the policy framework and accepted that, although there will not immediately be consistency across all medical schools on the MS AKT in the way in which they apply the policy framework, there will be consistency within a medical school. In other words, a candidate will have the same experience across the other exams they sit within their medical degree – including the MLA CPSA.

The central submissions noted that the Office of the Independent Adjudicator (OIA) had confirmed, during a workshop, that the fact that a student in one medical school was offered a different number of attempts to pass the MS AKT from a student in another medical school was not legally an issue as the student signs up to the rules applied by individual institutions when they join that medical school.

The GMC recognises that requests for reasonable adjustments, applications for mitigating circumstances, appeals, and fitness to practise concerns need to be considered holistically by the assessment provider locally, in the context of an individual student's circumstances, academic or otherwise. The GMC's acceptance of the policy framework being locally administered is based on medical schools' commitment, made through the MSC, to move towards greater consistency in the future. The central submissions identify that proactive steps to encourage a move to greater consistency have been taken, including workshops, surveying medical schools, sharing information and specialist information, and conducting follow-up surveys. Sufficient progress has been made at this stage.

The central submissions stated that the policies were developed collaboratively to gain wider views across a range of stakeholders and listed the following groups being represented:

-
- medical school staff including assessment experts and those in charge of the design and delivery of undergraduate medicine programmes
 - university registrars who set, apply and amend university policies
 - foundation school directors
 - medical students
 - recently qualified doctors
 - the GMC.

The central submissions identify that an additional meeting with the BMA Medical Students Committee was held to refine examples to be included in the policy on mitigating circumstances. Additionally, the MSC's AKT Policy Group includes a medical student representative.

Local submission

The assessment provider has described how local policies and procedures operate within the regulatory framework of their parent university.

The assessment provider has supplied copies of University Guidance material/Code of Practice in respect of local policies for the application of exceptional circumstances (ECs) and reasonable adjustments (RAs).

RAs are formally managed through a central university service – the University Disability, Support and Inclusion (DSI) service. The DSI notifies the assessment provider's Disability Liaison Officer (DLO). Following a meeting with the student, the DLO will arrange for individualised reasonable adjustments (organising a Reasonable Adjustments Panel if needed), which are implemented in accordance with the GMC's guidance *Welcomed and valued*. Of notable significance, is that the assessment provider's local EDI committee has influenced decisions on standard practices across the university to help improve the fairness of assessment.

The assessment provider has advised that students will normally be entitled to up to four valid attempts at the AKT. This will generally be split between two attempts during their first attempt of Year 4 (first sitting and in year re-sit) and two further attempts in a repeat of the fourth year of the course (repeat year first sit and in year re-sit).

ECs are managed by dedicated staff within the school, who ensure this information is kept separate from a student's academic reports these do not influence welfare decisions. Ahead of the AKT, the assessment provider will review all students who have submitted an EC.

We also note that university regulations have been changed to allow students to repeat Year 4 should they fail to meet the progression requirements but have a valid EC. If a student repeats the year but does not exceed the four permitted attempts at the AKT then the assessment provider would recommend an exceptional year of study.

Details regarding the assessment provider’s policy regarding examination misconduct are set out at requirement 15 below.

The assessment provider has demonstrated that there are appropriate policies and procedures in place that aim to ensure a fair and consistent experience for their students. They haven’t, however, described explicitly how their local arrangements align with the MSC’s national policy framework.

Next submission: The assessment provider should provide further detail on how fairness and ED&I principles are embedded in their policies and processes – this could be through describing how the principles in [Welcomed and valued](#) are applied when determining the necessary support for candidates or through case studies showing how policies and procedure are implemented (see [Guidance to assessment providers on creating a submission against the AKT requirements](#)).

12	<p>Resources and space</p> <p><i>The AKT must be delivered in a suitable environment for a high stakes assessment for all candidates.</i></p> <p>Demonstrate that the AKT takes place in a space appropriate for a high stakes assessment with suitable provision for the delivery method.</p>
Met?	<p>Yes</p> <p>Through both the central submissions and the local submission, the assessment provider has described the appropriateness of the venues in which they deliver the AKT and the suitability of the delivery method.</p>

Central submissions

The central submissions describe how the MS AKT will be delivered on an electronic exam delivery platform. The platform has been developed with the aim of ensuring that all students across UK medical schools receive a comparable test experience.

The exam delivery platform allows the assessment provider to make alterations to some aspects of the exam delivery. For example, in adding extra

time or rest breaks in the case of reasonable adjustments. Candidates are also able to make some changes themselves within the delivery platform. For example, the text on the delivery platform can be adjusted including magnification and coloured filters can be applied to the screen. The central submissions state that the text size/ colour can be optimised to meet specific requirements on request.

Local submission

The assessment provider has explained the facilities it will use for the delivery of the AKT and provided photographs of the two main venues. The examination will take place mainly in the Central Science Laboratory lab, with a second venue available for additional capacity and for students with reasonable adjustments. Both locations can be closed off to avoid disruption during the exam. Each venue has sufficient – and spare – capacity allowing candidates to be moved to an alternative terminal if there are technical difficulties that cannot be swiftly resolved. Each terminal within a venue must meet the minimum specification outlined by the university, including the installation of Safe Exam Browser software to allow delivery within a secure “lockdown browser” environment. Other rooms can be located for specific adjustments, if needed.

Prior to the AKT, the rooms and all computers are checked to ensure they are ready for use. The assessment provider and invigilators arrive in plenty of time on the day to make final preparations.

The MS AKT is delivered through the Safe Exam Browser software to allow deliver in a secure fashion. Staff from the assessment provider are responsible to starting the AKT within this browser and exam platform portal.

<p>13</p>	<p>Security</p> <p><i>The AKT must be developed and delivered within secure environments with appropriate measures in place across systems, venues and processes to prevent security breaches including leakage of test material and access to assessment content by unauthorised individuals.</i></p> <p>Describe and demonstrate how the security of the question bank and test papers is maintained.</p>
<p>Met?</p>	<p>Yes</p> <p>Through both the central submissions and the local submission, the assessment provider has described and demonstrated how the security of the question bank and test papers is maintained and that there are appropriate measures in place across local systems, venues, and processes to maintain the security of the AKT papers.</p>

Central submissions

As part of the central submissions, a security breach policy and guidance material were provided. Information was provided about SOPs for monitoring performance data for item leakage and for monitoring social media for MS AKT references.

Items for the MS AKT are stored in a secure item bank with restricted access permissions.

There are appropriate policies and documents, which must be signed by the relevant people involved, such as the MSC Anti-Fraud, Anti-bribery policy, Confidentiality Agreement and Conflict of Interest policy.

Students are warned against the sharing of information when they log on to the exam delivery platform and student noticeboards and social media are monitored.

The policy on exam misconduct provided with the central submissions as part of the national policy framework also expressly includes sharing, or attempting to share, any MS AKT exam content not published in formative material, as an example of exam misconduct.

The item bank and the exam delivery platform meet industry security standards and are protected by several layers of security controls determined by the software developers, relating to access, data, network and server security, and vulnerability management including penetration testing by accredited suppliers. Further, there are regular routine checks through the year of user rights at a medical school level to allow accounts to be activated or changed, and an automatic deactivation of a user after a specified period of inactivity.

The central submissions recognise that exam security is an issue spanning across multiple elements of the MS AKT. An 'AKT Security Group' has been established to respond to the emerging threat of artificial intelligence (AI) to exams (and hence the integrity of the results of individual candidates) and in light of the risk that the candidates may be able to breach the integrity of the item bank and share MS AKT items with the wider community, therefore affecting the results of larger numbers of candidates.

There is an intention to maintain the Security Group in the long term and to develop formal terms of reference. There are plans to broaden the membership – such as representation from the 'Secure Exam Browser Alliance' and the Universities and Colleges Admissions Service (UCAS) – to keep pace with changes in security issues in assessment, particularly regarding the rapid advances in technology. The central submissions demonstrate an increasing recognition of the risks of security breaches including leakage of test material and access to assessment content by unauthorised individuals requiring mitigation.

Local submission

The assessment provider's local submission states that only those holding specific roles as part of the central construction of the MS AKT have access to the items and assessments, and all staff involved in delivering the AKT receive training.

As referenced in relation to requirement 12, the assessment provider will deliver the AKT using lockdown browser software which integrates well with the MS AKT exam platform. The assessment provider will ensure that local staff who are trained in both the lockdown browser and exam platform are present in each venue for the duration of the assessment.

All candidates take the exam at the same time meaning no quarantining is required. The assessment provider will also have processes in place to ensure only appropriate candidates sit the exam; only those candidates who are eligible to take the MS AKT are registered for the assessment. Access to the MS AKT is limited to those that are registered and who complete the ID checks and have active system accounts.

14	Security <i>The AKT must be developed and delivered within secure environments with appropriate measures in place across systems, venues and processes to prevent security breaches including leakage of test material and access to assessment content by unauthorised individuals.</i> Describe and demonstrate how exam materials (digital and/or paper) are prepared, stored and delivered.
Met?	Yes - with a recommendation and further information to be provided at the next submission Through both the central submissions and the local submission, the assessment provider has described and demonstrated how exam materials are securely prepared, stored and delivered.

Central submissions

The central submissions describe and demonstrate how exam materials are prepared, stored and delivered in a secure environment with appropriate measures in place to prevent security breaches.

The experience of, and lessons learned from, delivering online exams (such as the Prescribing Safety Assessment) during the Covid-19 pandemic have been drawn upon in considering security. Lockdown browser software will be mandatory for the delivery of the MS AKT.

As a security measure, the sequencing of items within a paper will differ for each candidate. The Exam Board plans to investigate computer programs that could be run to proactively identify evidence of cheating and collusion. Efforts to minimise the risk of cheating, including this deterrent measure, are to be encouraged.

The standardised Invigilators Guide sets out security requirements immediately before and during the MS AKT, such as forbidding mobile phones within the exam environment. There is further centralised guidance on how to handle local data breaches, including the assessment provider's responsibility to report breaches to the MSC (as central coordinator), and the support available to the assessment provider for issues requiring urgent escalation.

Recommendation: Consideration should be given to putting a process into place for monitoring emerging threats and exploits to the software deployed to secure the exam system and item bank e.g. secure browsers.

Local submission

As noted in requirement 13 above and requirement 15 below, the assessment provider will ensure access to AKT materials is limited, the assessment will be delivered through allocated university terminals hosting a secure browser, registration and ID checks will be conducted and there is invigilation to protect the security of the examination.

The parent university operates a strict Code of Conduct for assessments, a copy of which was submitted by the assessment provider together with a copy of the verbal briefing delivered by the Senior Invigilator at the start of every assessment.

The assessment provider proscribes the use of additional electronic device other than approved calculators (which cannot store text) and the removal of materials from the assessment venue is prohibited; notes/rough work generated by students are collected and disposed as confidential waste.

The assessment provider has advised that the combination of their local measures and those implemented by the MSC are designed to ensure that items used within AKT assessments will not be compromised in any way. However, the assessment provider has also set out that, should examination misconduct be observed or suspected during the course of the AKT, a written report will be completed by the Senior Invigilator. The report is returned to the University Examinations Office and shared with the central MS AKT Exam Board. Further a note will be added within the exam platform.

Although the assessment provider has set out the process deployed in respect of exam misconduct, there is no description of what learning is undertaken as part quality assurance processes.

Next submission: The assessment provider should describe how incident reporting on the day feeds into quality assurance or other processes with a view to preventing recurrence where practicable and necessary.

15	Security <i>The AKT must be developed and delivered within secure environments with appropriate measures in place across systems, venues and processes to prevent security breaches including leakage of test material and access to assessment content by unauthorised individuals.</i> Describe and demonstrate the arrangements for AKTs delivered in multiple venues or over multiple sittings.
Met?	Yes - with a point for future action Through both the central submissions and the local submission, the assessment provider has described and demonstrated the arrangements for security across its local venues.

Central submissions

The central submissions describe and demonstrate the measures used to ensure the security of MS AKT materials across multiple sessions and venues. They have also shown how they monitor results across sittings for evidence of security breach, and how this is followed up.

The exam software platform on which the MS AKT is delivered to all medical schools is able to accommodate sittings in multiple venues concurrently. The standardised central guidance for invigilators and administrators provides clear instructions for setting up multiple sittings.

The assessment provider's local invigilator has control of the venue enabling them to deal with local interruptions (for example, fire alarms) during the exam.

Options are being explored to deliver the MS AKT offline, in order to accommodate internet outages.

Future action: Submit an update of the actions taken to remain alert to potential new security threats and also informed of developments in monitoring and preventing security breaches.

Local submission

All candidates will start each paper of the MS AKT at the same time, regardless of the venue in which they sit the assessment (although those with reasonable adjustments may have a later end time). This means that there is no need for the assessment provider to quarantine candidates. The same provisions regarding Code of Conduct, invigilator announcement and system message apply to each venue (see requirement 14 above).

With each of the assessment provider's venues being structured as a separate 'sitting' within the exam platform, the staff at each venue can independently control their examination. The assessment provider has stated that this approach is designed to simplify the delivery of the assessment and minimise the complexity of delivery across multiple venues.

The assessment provider will also use a secure MS Teams channel to allow for real time discussion of any issues faced on the day. There will be a minimum of two invigilators in each exam venue, including a Senior Invigilator who is tasked with reporting any examination misconduct (see requirement 14).

16

Security

The AKT must be developed and delivered within secure environments with appropriate measures in place across systems, venues and processes to prevent security breaches including leakage of test material and access to assessment content by unauthorised individuals.

Describe and demonstrate how invigilators are trained and briefed.

Met?

Yes - with a recommendation and two areas of further information to be provided at the next submission

Through both the central submissions and the local submission, the assessment provider has described and demonstrated how invigilators are trained and briefed.

Central submissions

As part of the central submissions, an invigilator guide was provided. This supports the delivery of the MS AKT across UK medical schools by providing standardised guidance. The guidance relates to the MS AKT pilots and will be updated once the assessment goes live and on an annual basis.

The guidance provides step by step advice for several areas such as to how to start the exam or assist students who are experiencing difficulties. The

central submissions state that the guidance will be updated for the live exam. To minimise variability between assessment providers, the guidance should include further advice on matters such as minimum standards for invigilation, including numbers and training for invigilators.

Training and practice opportunities are available for invigilators, covering key areas such as delivery procedures, demonstration of the exam delivery platform and making adjustments, including extra time and rest periods.

Guidelines have been developed for managing data breaches in the exam environment, which include that an individual medical school should lead on handling breaches that can be resolved locally but must notify the MSC as quickly as feasible. MSC staff and employees of the software company that manages the exam delivery platform are available for every assessment and a 'rapid response team' is being established to handle situations requiring immediate escalation.

There is guidance for reporting security breaches and local invigilators are also required to report any issues that arose during the testing session and how these were handled. Where an instance of exam misconduct or breach of cyber security occurs, this will be fed back to assessment providers by the MSC and passed on by them to invigilators.

Any adjustments that are made around delivery as a result of issues, such as system crashes, are to be declared by each assessment provider and reviewed for consistency by the AKT Exam Board as part of standard quality assurance processes.

Recommendation: Plans to update the invigilator guidance following the pilots should be pursued to include guidance on minimum standards, numbers and training for invigilators of the MS AKT to support standardisation and minimise the risk of variability.

Local submission

Invigilation for the assessment provider's AKT is a combination of university appointed and trained invigilators and School of Medicine Staff. The former invigilate the assessment; the latter support/administer the exam platform.

Each invigilation team is led by a Senior Invigilator, who is appointed having demonstrated significant experience of invigilation procedures and a thorough understanding of the examination regulations; standard invigilators are appointed having provided evidence of previous work undertaken in a professional setting.

There is a full training session for new invigilators and annual briefing/training session for returning invigilators. All invigilators are issued with an Invigilation Handbook, which is updated annually (a copy of which was provided by the assessment provider together with the Powerpoint

presentation used by the university for training for invigilators). All invigilators must familiarise themselves with the MSC AKT invigilator guide. Given there is both an Invigilation Handbook and the MS AKT invigilator guide, the assessment provider should ensure that the documents are aligned and any inconsistencies or gaps are addressed.

Invigilators will be supported by members of staff from the assessment provider, who have been trained in the secure browser and the exam platform using the materials provided by the MSC. The assessment provider is maintaining a pool of trained staff comprising of both academic and Professional Services Staff (PSS) to ensure sufficient capacity to effectively support the delivery of the exam. The training is supplemented by written guidance for staff supporting online exams using the exam platform (an updated version was submitted by the assessment provider).

There will be a minimum of two of these staff members to support each venue. The ratio for invigilation allocation is one Senior Invigilator and one Standard Invigilator together with one additional invigilator for every 50 (or part of 50) students.

The invigilators and the staff from the assessment provider will meet at the venue 45 minutes before the start of the assessment to enable last minute issues to be addressed. However, it is not clear what level of pre or post briefing is undertaken to ensure a common understanding and to discuss issues and determine actions, if any, following the MS AKT.

Next submission: The assessment provider should describe how invigilators are briefed on the day of an exam.

Next submission: The assessment provider should explain how incidents and technical issues on the day should be dealt with, including escalating to the MSC as quickly as feasible.

17	<p>Data acquisition</p> <p><i>There must be secure and robust processes in place to capture and check assessment data.</i></p> <p>Describe and demonstrate the approach to collecting or uploading candidates' responses on the day and dealing with missing data identified at the end of the test.</p>
Met?	<p>Yes – with further information to be provided at the next submission</p> <p>Through both the central submissions and the local submission, the assessment provider has appropriately described how assessment data are captured and the processes in place to ensure these are accurate and complete.</p>

Central submissions

Candidates will take the MS AKT on-screen using the MSC-provided exam delivery platform. The MS AKT will be delivered online, meaning there is live data capture and candidates' responses to the items are recorded on the server. The functionality of the exam delivery platform is being developed to ensure that during any periods of internet connectivity loss, candidates' responses continue to be captured and will be automatically uploaded when the connection is restored.

Candidates receive automatic warnings if they risk losing their responses, prompting them to take necessary actions. The system highlights all unanswered items for candidates to review. Candidate response data are securely stored on a server for quality assurance, analysis, and future requirements.

The approach to data acquisition includes processes for identifying possible causes for, and dealing with, missing responses, and processing candidates' results. The AKT Exam Board will be notified immediately if a technical failure is identified.

Local submission

As outlined in previous sections, the assessment provider will have dedicated staff at each venue to monitor the AKT and deal with any issues in real time. The assessment provider has confirmed that staff are trained to keep a record of time lost so that that this can be accounted for, as needed, and that each terminal is hardwired to the University network.

The assessment provider outlines that the MSC will quality assure the data from the examination and that it will work with the MSC should any issues need to be resolved. While these processes are appropriate, we noted that the assessment provider has not referenced escalation to the central MSC team as an avenue to escalate issues which can't be resolved at a local level. This needs to be built into the assessment provider's processes.

Next submission: The assessment provider should advise how its processes to deal with incidents on the day have been revised to ensure that issues that cannot be resolved locally have been escalated to the MSC as quickly as feasible.

18

Production of results

Performance metrics must be used to support decision-making and ensure the standard of proficiency is being met.

Demonstrate how results data are processed, checked and analysed after the AKT, including criteria for making post-test adjustments,

	to produce test outcomes for ratification by the relevant exam board.
Met?	Yes Through the central submissions, the assessment provider has appropriately described how results data are processed, checked and analysed after the AKT.
Central submissions	
<p>The central submissions set out how data are processed for operational, quality assurance and research purposes. MS AKT results data will be captured by the exam delivery platform and stored in a secure MSC assessment data storage system.</p> <p>The central submissions detail the integrity checks that are performed, including checks regarding correct number of students and missing data. Post-test analysis is also detailed with two standard methods – classical test theory and Rasch – being used to understand how well the test and items within the test have performed. Items requiring further review are identified for the AKT Exam Board to consider.</p> <p>Where an item, or items, is found not to have performed as intended (for example, where the analysis suggests that there could be more than one correct response; an item flaw which would disadvantage students) a panel of at least five members of the Standard Setting Group is convened. The panel will review the item/s and analysis and make recommendations to the AKT Exam Board for retaining, adjusting, or removing questions from the assessment. The AKT Exam Board, SSG panel and psychometricians will work together to make any post-test changes and ensure the completeness and accuracy of results prior to release to medical schools.</p>	
Local submission	
N/A	
19	<p>Psychometric analysis</p> <p><i>Assessment providers must demonstrate that the AKT is operating as intended. This includes evaluation of test performance and outcomes. Reports, data and information must be provided to the GMC for quality assurance purposes.</i></p>

	Describe and demonstrate how the post-test analyses feed into decision-making and quality improvement.
Met?	Yes Through the central submissions, the assessment provider has set out how the post-test analyses feed into decision-making and quality improvement.
Central submissions	
<p>The central submission outlines the post-test analysis process for decision-making and quality improvement. This includes a range of psychometric and operational analyses that are conducted after each assessment and on an annual cycle. This analysis will be used to produce a report for each medical school, detailing MS AKT performance among their students, and also as compared to the national performance profile of all medical schools combined. In addition, the MS AKT results data will also be matched with student demographic data and analysed to identify potential award gaps, including analysis by protected characteristics.</p> <p>The central submissions outline the use of psychometric analysis to identify item leakage (which occurs when items, and their correct answers, are shared, or 'leaked' and become common knowledge among students). This includes analysing the performance of the common items over time to detect possible changes in accessibility (change in the number of candidates getting the item/s correct), which could be evidence of item leakage. The submission also highlights preventive measures such as online delivery, the use of safe exam browsers, item randomisation, and effective invigilation. While this approach appears robust, the effectiveness of the proposed measures in addressing potential item leakage should be monitored.</p> <p>Item performance data will be shared with the Item Writing Group who will edit, update and improve items accordingly. Data will also be shared with the Standard Setting Group and panels to help inform their discussions about the performance of borderline candidates (which is important for maintaining the national standard). The psychometric analysis processes will help to enhance item, and test, quality and ensure that standard setters have insight to the appropriateness and consistency of the standard applied to the MS AKT.</p>	
Local submission	
N/A	

20	<p>Governance and fairness</p> <p><i>The AKT must be set and delivered through governance structures approved by the GMC. The AKT must embed legal requirements, principles and good practice of equality, diversity and inclusion in its development, delivery, monitoring and review, to ensure a fair and comparable test experience for all candidates.</i></p> <p>Describe the boards and operational groups involved in the governance of the AKT.</p>
Met?	<p>Yes</p> <p>Through the central submissions and the local submission, the assessment provider has appropriately described the roles and responsibilities of the groups governing the AKT and how they interact with and contribute to AKT governance structures.</p>
Central submissions	
<p>The central submissions describe the governance and operations for delivering and overseeing the MS AKT. This comprises the MS AKT Board, which is attended by all Heads of UK medical schools, the MS AKT Exam Board, four operational groups with responsibility for technical aspects of MS AKT development (item development, standard setting, exam construction and policy), and the panels or groups who deliver on practical aspects of the MS AKT, such as writing the test items.</p> <p>The MSC have developed terms of reference which specify the purpose and objectives of each group or board and how each is expected to promote equality and diversity in their particular operational domain.</p> <p>Each board or panel position has been recruited on the basis of a job description and advert and selected via a competency-based panel interview. All stages of selection ensured consideration of EDI principles, such as ensuring access for applicants with disabilities, and actively encouraging applications from individuals from groups sharing protected characteristics. The central submissions states that the recruitment and selection processes go beyond the legal responsibilities under the Equality Act 2010.</p> <p>To demonstrate the impact of this approach to recruitment and selection, MSC provide analysis of the demographic profile of the applicants and those appointed to the MS AKT governance and operational groups combined. This analysis shows that the diversity among applications is mirrored in the</p>	

diversity of those appointed. Some protected characteristics were not represented within the applications, and hence, among those appointed to the governance and operational groups.

The central submissions outline that medical schools view UKFPO as the key stakeholder for the MS AKT, and, as such, ensure that the UKFPO representative/s have full voting rights as part of the MS AKT Board.

Local submission

The assessment provider has identified that the central submissions set out the governance structure for the MS AKT and that it has contributed to the MSC governance structure by providing staff with relevant expertise to support the processes developed to support the governance of the assessment.

At a local level, decisions made in relation to implementing the AKT are taken through two key committees, which have both student and lay representatives. The chairs of these committees are members of the MSC reference group, allowing for updates on national policy to be disseminated.

21	<p>Governance and fairness</p> <p><i>The AKT must be set and delivered through governance structures approved by the GMC. The AKT must embed legal requirements, principles and good practice of equality, diversity and inclusion in its development, delivery, monitoring and review, to ensure a fair and comparable test experience for all candidates.</i></p> <p>Describe and demonstrate how ED&I considerations are applied across processes and decision-making.</p>
Met?	<p>Yes</p> <p>Through the central submissions, the assessment provider has described how ED&I considerations are applied across processes and decision-making.</p>

Central submissions

On behalf of the assessment provider, and all other medical schools, the MSC has undertaken an equality analysis. A number of groups were represented on a working group overseeing the development of the Equality Analysis and the national policy framework including assessment experts,

university registrars, foundation school directors, medical students, recently qualified doctors and the GMC.

The MSC’s AKT Policy Group (see requirement 20) is responsible, through its terms of reference, for ED&I in respect of the MS AKT. It will in due course be responsible for updating the equality analysis and the action plan. MS AKT performance data and demographic data will be collected to identify award gaps between students who share protected characteristics and those who do not. The first collection took place during the 2022/23 pilot. The data will be reported to both the MS AKT Board and the MS AKT Exam Board. It will also be fed back to the MSC EDI Alliance who plan to use this information to identify areas of work that need initiating or prioritising. The AKT Board plan to make recommendations as to whether they feel there are particular areas the EDI Alliance should focus on.

The assessment provider will also receive their own data which will allow them to put interventions in place to address any award gaps. The data can then be used to evaluate these interventions as it will be collected and shared on an annual basis.

Local submission

22	<p>Governance and fairness</p> <p><i>The AKT must be set and delivered through governance structures approved by the GMC. The AKT must embed legal requirements, principles and good practice of equality, diversity and inclusion in its development, delivery, monitoring and review, to ensure a fair and comparable test experience for all candidates.</i></p> <p>Describe and demonstrate how stakeholders are involved across the AKT’s governance.</p>
-----------	---

Met?	<p>Yes - with a recommendation</p> <p>Through the central submissions, the assessment provider has provided sufficient information to show the requirement has been met although there are opportunities to strengthen stakeholder involvement as the assessment develops and there is a future intention to increase the range of views and stakeholders involved.</p>
-------------	---

Central submissions

The central submission describes those involved in the development, delivery and evaluation of the MS AKT and identifies the key stakeholder groups as UK medical schools and the UKFPO. The submission states that the majority of people involved in the development of the MS AKT are working clinicians who have contact with F1 doctors throughout the UK on a day-to-day basis.

As identified in the GMC's documentation to accompany the AKT requirements,* the requirement expects that different stakeholder groups will be involved and contribute to the AKT and that the views of stakeholders and ED&I considerations have been taken into account and informed the AKT. Concerns were raised by AKT advisers that the representation of lay and other stakeholders was too limited, too insular and too focused on the involvement of medical academic stakeholders. There were some concerns that there was no clear evidence about the range and distribution of schools involved in the MS AKT development.

The central submissions identify an intention – following the piloting – to encourage junior doctors to take part in the governance and operational processes. The plan is that this is achieved through competency-based recruitment.

The central submission contains evidence of the way in which medical schools or the medical profession have been invited to join the governance of the MS AKT. The perspective this offers is important and the plans to expand beyond the narrow focus on medical school involvement is welcome.

Recommendation: Consideration should be given to increasing the breadth of different perspectives within the MS AKT operational groups and governance structure to reflect the stakeholder environment of the MS AKT and its role as a requirement for a PMQ and progression to the medical register.

Assessment provider's response

The assessment provider has the opportunity to provide an overall response:

Assessment provider's response

The assessment provider thanked the reviewer for the thoughtful and constructive feedback on their submission. They stated that they were extremely pleased to hear that the reviewer recommended their submission met the AKT requirements, as set out in the [MLA framework](#).

The assessment provider also confirmed that they will provide the requested updates and additional information in their next submission.
