The CCT in
Intensive Care Medicine

Syllabus
4.3 Administers blood and blood products safely ................................................................. 40
4.4 Uses fluids and vasoactive / inotropic drugs to support the circulation ..................... 40
4.5 Describes the use of mechanical assist devices to support the circulation ................... 41
4.6 Initiates, manages, and weans patients from invasive and non-invasive ventilatory support 41
4.7 Initiates, manages, and weans patients from renal replacement therapy ..................... 42
4.8 Recognises and manages electrolyte, glucose and acid-base disturbances .................. 43
4.9 Co-ordinates and provides nutritional assessment and support ..................................... 43

Domain 5: Practical procedures .............................................................................................. 45
Competencies .......................................................................................................................... 45
Knowledge, skills and attitudes common to all competencies .............................................. 46

Respiratory System ................................................................................................................ 46
5.1 Administers oxygen using a variety of administration devices ........................................ 46
5.2 Performs emergency airway management ...................................................................... 47
5.3 Performs difficult and failed airway management according to local protocols .............. 48
5.4 Performs endotracheal suction ....................................................................................... 48
5.5 Performs fiberoptic bronchoscopy and BAL in the intubated patient ......................... 48
5.6 Performs percutaneous tracheostomy ............................................................................ 48
5.7 Performs chest drain insertion ....................................................................................... 49

Cardiovascular System ......................................................................................................... 49
5.8 Performs arterial catheterisation ..................................................................................... 49
5.9 Describes ultrasound techniques for vascular localisation ............................................. 49
5.10 Performs central venous catheterisation ...................................................................... 49
5.11 Performs defibrillation and cardioversion ................................................................... 50
5.12 Performs transthoracic cardiac pacing, describes transvenous .................................... 50
5.13 Describes how to perform pericardiocentesis ............................................................... 50
5.14 Demonstrates a method for measuring cardiac output and derived haemodynamic variables .... 50

Central Nervous System ....................................................................................................... 51
5.15 Performs lumbar puncture (intradural / ‘spinal’) under supervision ................................. 51
5.16 Manages the administration of analgesia via an epidural catheter ............................... 51

Gastrointestinal System ........................................................................................................ 51
5.17 Performs abdominal paracentesis ................................................................................ 51
5.18 Describes Sengstaken tube (or equivalent) placement ................................................ 51
5.19 Performs nasogastric tube placement ......................................................................... 52

Genitourinary System .......................................................................................................... 52
5.20 Performs urinary catheterisation .................................................................................. 52

Domain 6: Perioperative care ................................................................................................. 53
Competencies .......................................................................................................................... 53
Knowledge, skills and attitudes common to all sections ....................................................... 53
6.1 Manages the pre- and post-operative care of the high risk surgical patient ................. 54
6.2 Manages the care of the patient following cardiac surgery under supervision ............ 55
6.3 Manages the care of the patient following craniotomy under supervision .................. 56
6.4 Manages the care of the patient following solid organ transplant under supervision .... 57

Domain 7: Comfort and recovery ........................................................................................ 60
Competencies .......................................................................................................................... 60
Knowledge, skills and attitudes common to all competencies .............................................. 60
7.1 Identifies and attempts to minimise the physical and psychosocial consequences of critical illness for patients and families ........................................................................... 61
7.2 Manages the assessment, prevention and treatment of pain and delirium ..................... 62
7.3 Manages sedation and neuromuscular blockade ............................................................ 62
7.4 Communicates the continuing care requirements, including rehabilitation, of patients at ICU discharge to health care professionals, patients and relatives .......................... 63
7.5 Manages the safe and timely discharge of patients from the ICU ............................... 64

Domain 8: End of life care .................................................................................................... 65
Competencies .......................................................................................................................... 65

III - 3
Knowledge, skills and attitudes common to all competencies ................................................................. 65

8.1 Manages the process of withholding or withdrawing treatment with the multi-disciplinary team ................................................................. 66

8.2 Discusses end of life care with patients and their families / surrogates ............................................. 66

8.3 Manages palliative care of the critically ill patient ............................................................................. 67

8.4 Performs brain-stem death testing ...................................................................................................... 67

8.5 Manages the physiological support of the organ donor ....................................................................... 68

8.6 Manages donation following cardiac death .......................................................................................... 68

Domain 9: Paediatric care .......................................................................................................................... 69

Competencies .............................................................................................................................................. 69

Knowledge, skills and attitudes common to all competencies ..................................................................... 69

9.1 Describes the recognition of the acutely ill child and initial management of paediatric emergencies ........................................................................................................ 69

9.2 Describes the national legislation and guidelines relating to child protection and their relevance to critical care .......................................................................................................................... 70

Domain 10: Transport .................................................................................................................................... 71

Competencies .............................................................................................................................................. 71

Knowledge, skills and attitudes common to all competencies ..................................................................... 71

10.1 Undertakes the transport of the mechanically ventilated critically ill patient outside the ICU ....... 71

Domain 11: Patient safety and health systems management ...................................................................... 73

Competencies .............................................................................................................................................. 73

Knowledge, skills and attitudes common to all competencies ..................................................................... 73

11.1 Leads a daily multidisciplinary ward round ...................................................................................... 75

11.2 Complies with local infection control measures .............................................................................. 75

11.3 Identifies environmental hazards and promotes safety for patients and staff .................................... 75

11.4 Identifies and minimises risk of critical incidents and adverse events, including complications of critical illness ................................................................................................................... 76

11.5 Organises a case conference ............................................................................................................ 77

11.6 Critically appraises and applies guidelines, protocols and care bundles ........................................ 77

11.7 Describes commonly used scoring systems for assessment of severity of illness, case mix and workload ............................................................................................................................. 78

11.8 Demonstrates an understanding of the managerial and administrative responsibilities of the ICM specialist ........................................................................................................................................ 78

Domain 12: Professionalism .......................................................................................................................... 80

Competencies .............................................................................................................................................. 80

Knowledge, skills and attitudes common to all competencies ..................................................................... 80

Communication ......................................................................................................................................... 82

12.1 Communicates effectively with patients and relatives ......................................................................... 82

12.2 Communicates effectively with members of the health care team ................................................... 82

12.3 Maintains accurate and legible records / documentation .................................................................. 82

Professional relationships with patients and relatives............................................................................. 83

12.4 Involves patients (or their surrogates if applicable) in decisions about care and treatment ............... 83

12.5 Demonstrates respect of cultural and religious beliefs and an awareness of their impact on decision making ........................................................................................................................................ 83

12.6 Respects privacy, dignity, confidentiality and legal constraints on the use of patient data ................. 83

Professional relationships with members of the healthcare team ............................................................. 83

12.7 Collaborates and consults; promotes team-working ........................................................................... 83

12.8 Ensures continuity of care through effective hand-over of clinical information ................................ 83

12.9 Supports clinical staff outside the ICU to enable the delivery of effective care ................................ 83

12.10 Appropriately supervises, and delegates to others, the delivery of patient care ............................ 83

Self governance ........................................................................................................................................ 83

12.11 Takes responsibility for safe patient care ......................................................................................... 83

12.12 Formulates clinical decisions with respect for ethical and legal principles ...................................... 83

12.13 Seeks learning opportunities and integrates new knowledge into clinical practice ....................... 83
12.14 Participates in multidisciplinary teaching ................................................................. 83
12.15 Participates in quality improvement under supervision ............................................. 83

Basic Sciences ....................................................................................................................... 85
  Anatomy ............................................................................................................................... 85
  Physiology & Biochemistry ............................................................................................... 86
  Pharmacology ..................................................................................................................... 87
  Physics & Clinical Measurement ....................................................................................... 89
1. Introduction

The development of the syllabus for the CCT in ICM has drawn unashamedly and gratefully on the CoBaTrICE syllabus developed under the auspices of the European Society of Intensive Care Medicine. It is central to the development of the CCT Curriculum that it should be a valid and accepted qualification for the professional practice of Intensive Care Medicine throughout Europe.

This syllabus is the aggregate of all the knowledge, skills, behaviours and attitudes required for each of the required ICM CCT competencies. It is divided into 13 sections: 12 domains plus Basic Sciences. This format inevitably results in some repetition with the same topic appearing in more than one domain and linked to multiple competencies. Similarly there is some cross-over between the knowledge and Basic Sciences, and knowledge and skills lists.

This syllabus can be used by trainees and trainers to aid reflective learning, formal teaching and to guide some aspects of assessment. It could also be modified to audit the content of training received in different centres. The syllabus is presented in tables to allow trainees to track the progression of their learning. It is not intended that these tables be used as checklists for the assessment of competence. No trainee can be expected to have a comprehensive knowledge of every single aspect of the syllabus.

A full description of the CoBaTrICE methodology can be found in section 1.5.1 of Part I of this curriculum.

1.1 Assessment Tools Key

Each competence is mapped to the relevant assessment tools as follows:

<table>
<thead>
<tr>
<th>Assessment Tools</th>
<th>Code</th>
<th>Full name</th>
</tr>
</thead>
<tbody>
<tr>
<td>Direct Observation of procedural Skills</td>
<td>D</td>
<td>DOPS</td>
</tr>
<tr>
<td>ICM Mini- Clinical Evaluation Exercise</td>
<td>I</td>
<td>ICM-CEX</td>
</tr>
<tr>
<td>Case Based Discussion</td>
<td>C</td>
<td>CBD</td>
</tr>
<tr>
<td>Multisource Feedback</td>
<td>M</td>
<td>MSF</td>
</tr>
<tr>
<td>Acute Care Assessment Tool</td>
<td>T</td>
<td>ACAT</td>
</tr>
<tr>
<td>Simulation</td>
<td>S</td>
<td></td>
</tr>
<tr>
<td>Examination</td>
<td>E</td>
<td></td>
</tr>
</tbody>
</table>

All competencies annotated with the letter ‘E’ can be examined in any of the components of the FFICM Final examination identified in the examination blueprint in Part II of this curriculum.

1.2 Good Medical Practice

Each competence is also mapped to the four domains of Good Medical Practice:

<table>
<thead>
<tr>
<th>Domains of Good Medical Practice</th>
<th>Domain</th>
<th>Descriptor</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>Knowledge, skills and performance</td>
<td></td>
</tr>
<tr>
<td>2</td>
<td>Safety and quality</td>
<td></td>
</tr>
<tr>
<td>3</td>
<td>Communication, partnership and teamwork</td>
<td></td>
</tr>
<tr>
<td>4</td>
<td>Maintaining trust</td>
<td></td>
</tr>
</tbody>
</table>
2. Curriculum competencies

Listed below are the competencies for the *CCT in Intensive Care Medicine*, compiled for ease of reference. Each competency, along with its corresponding GMP and assessment method mapping, is also listed later in this manual within its relevant Syllabus domain. Full GMP and assessment mapping can also be found in *Part II: Assessment System*.

<table>
<thead>
<tr>
<th>Domain 1: Resuscitation and management of the acutely ill patient</th>
<th>Assessment Methods</th>
<th>GMP</th>
</tr>
</thead>
<tbody>
<tr>
<td>1.1 Adopts a structured and timely approach to the recognition, assessment and stabilisation of the acutely ill patient with disordered physiology</td>
<td>I, C, M, T, S, E</td>
<td>1</td>
</tr>
<tr>
<td>1.2 Manages cardiopulmonary resuscitation - ALS recommended</td>
<td>I, M, T, S, E</td>
<td>1</td>
</tr>
<tr>
<td>1.3 Manages the patient post resuscitation</td>
<td>I, M, T, S, E</td>
<td>1</td>
</tr>
<tr>
<td>1.4 Triages and prioritises patients appropriately, including timely admission to ICU</td>
<td>C, M, T, E</td>
<td>1</td>
</tr>
<tr>
<td>1.5 Assesses and provides initial management of the trauma patient</td>
<td>D, I, M, T, C, S, E</td>
<td>1</td>
</tr>
<tr>
<td>1.6 Assesses and provides initial management of the patient with burns</td>

</table>
### Chronic Disease

3.2 Identifies the implications of chronic and co-morbid disease in the acutely ill patient  

| | C, E | 1 |

### Organ System Failure

3.3 Recognises and manages the patient with circulatory failure  

| | I, C, T, S, E | 1 |

3.4 Recognises and manages the patient with, or at risk of, acute renal failure  

| | I, C, T, E | 1 |

3.5 Recognises and manages the patient with, or at risk of, acute liver failure  

| | I, C, T, E | 1 |

3.6 Recognises and manages the patient with neurological impairment  

| | I, C, T, S, E | 1 |

3.7 Recognises and manages the patient with acute gastrointestinal failure  

| | I, C, T, E | 1 |

3.8 Recognises and manages the patient with severe acute respiratory failure/acute lung injury syndromes (ALI/ARDS)  

| | I, C, T, E | 1 |

3.9 Recognises and manages the septic patient  

| | I, C, T, E | 1 |

3.10 Recognises and manages the patient following intoxication with drugs or environmental toxins  

| | I, C, S, E | 1 |

3.11 Recognises life-threatening maternal peripartum complications and manages care  

| | I, C, S, E | 1 |

### Domain 4: Therapeutic interventions / Organ support in single or multiple organ failure

<table>

Domain 1: Resuscitation and initial management of the acutely ill patient

General Principles

The point of first contact with an acutely ill, deteriorating, or collapsed patient requires clinicians to take action to prevent or correct physiological deterioration despite uncertainty about causation and the precise underlying diagnosis in acutely ill patients. Meeting this challenge – action in uncertainty – demands a structured approach to patient management, as exemplified by the resuscitation algorithms. Although less well developed for the acutely ill patient, they are of equal importance.

A wide outline knowledge is expected even at an early stage of training

Features of competent performance may include:

- Recognition of presenting signs and symptoms
- Identification and rapid response to life-threatening complications
- Planning and prioritisation of investigations and monitoring – appropriate; timely
- Appropriate differential diagnosis
- Clear decision making and immediate management strategies (including application of relevant protocols / guidelines / care bundles)
- Effective team working and leadership – clear communication and instructions
- Appropriate referral / consultation
- Recognition of limitations (self and others)
- Attention to patient safety

Domain 1: Competencies

The competences which make up the syllabus for this domain are listed below, with mapping to possible assessment methods and Good Medical Practice.

<table>
<thead>
<tr>
<th>Competence</th>
<th>Description</th>
<th>Assessment methods</th>
<th>GMP</th>
</tr>
</thead>
<tbody>
<tr>
<td>1.1</td>
<td>Adopts a structured and timely approach to the recognition, assessment and stabilisation of the acutely ill patient with disordered physiology</td>
<td>I, C, M, T, S, E</td>
<td>1</td>
</tr>
<tr>
<td>1.2</td>
<td>Manages cardiopulmonary resuscitation</td>
<td>I, M, T, S, E</td>
<td>1</td>
</tr>
<tr>
<td>1.3</td>
<td>Manages the patient post resuscitation</td>
<td>I, M, T, S, E</td>
<td>1</td>
</tr>
<tr>
<td>1.4</td>
<td>Triages and prioritises patients appropriately, including timely admission to ICU</td>

Domain 1: Syllabus

This is a detailed list of items which describe the depth and breadth of knowledge, skills and attitudes which make up the above competences. These items are not intended to be assessed individually but only as part of an assessment of the relevant competence, and have therefore not been individually mapped.

Knowledge, skills and attitudes common to all competencies

<table>
<thead>
<tr>
<th>Knowledge</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Recognises</td>
<td>the importance of ensuring physiological safety as a primary aim</td>
</tr>
<tr>
<td>Recognises</td>
<td>the importance of timely institution of organ-system support</td>
</tr>
</tbody>
</table>
Recognises the need for supportive care for all organ systems whether failing / injured or not.

**Skills**

- Recognise and manage emergencies; seek assistance appropriately
- Order and prioritise appropriate investigations
- Professional and reassuring approach - generates confidence and trust in patients and their relatives
- Lead, delegate and supervise others appropriately according to experience and role
- Clear explanations given to patient, relatives and staff
- Consults and takes into account the views of referring clinicians; promotes their participation in decision making where appropriate

**Attitudes**

- Patient safety is paramount
- Rapid response and resuscitation
- Determination to provide best and most appropriate care possible regardless of environment
- Recognises personal limitations, seeks and accepts assistance or supervision (knows how, when and who to ask)

### 1.1 Adopts a structured and timely approach to the recognition, assessment and stabilisation of the acutely ill patient with disordered physiology

**Knowledge**

- Early warning signs of impending critical illness
- Causes of cardio-respiratory arrest, identification of patients at risk and corrective treatment of reversible causes
- Clinical signs associated with critical illness, their relative importance and interpretation
- Clinical severity of illness and indications when organ dysfunctions or failure are an immediate threat to life

**Causes, recognition and management of:**

- Acute chest pain
- Tachypnoea and dyspnoea
- Upper and lower airway obstruction
- Pulmonary oedema
- Pneumothorax (simple and tension)
- Hypoxaemia
- Hypotension
- Shock states
- Anaphylactic and anaphylactoid reactions
- Hypertensive emergencies
- Acute confusional states and altered consciousness
- Acute seizures / convulsions
- Oliguria and anuria
- Acute disturbances in thermoregulation

**Treatment algorithms for common medical emergencies**

- Immediate management of acute coronary syndromes
- Peri-arrest arrhythmias and the principles of their management (bradycardia, broad complex tachycardia, atrial fibrillation, narrow complex tachycardia)

**Methods for securing vascular access rapidly**

- Surface anatomy: structures in the antecubital fossa; large veins and anterior triangle of the neck; large veins of the leg and femoral triangle

**Techniques for effective fluid resuscitation**

- Principles of emergency airway management (see 5.3)
- Indications for, and methods of, ventilatory support
- Indications for not starting resuscitation or ceasing an initiated attempt
- Relevance of prior health status in determining risk of critical illness and outcomes
- Measures of adequacy of tissue oxygenation, e.g. base deficit, lactate, central venous saturation
- Treatment strategies for abnormalities of fluid, electrolyte, acid-base and glucose balance

**Skills**

- Considers legal and ethical issues: patient autonomy, appropriateness of resuscitation and ICU admission.
**Conduct a primary survey:** obtain relevant information rapidly and accurately
Assess conscious level, status of airway and cervical spine, and conduct careful systems review
Monitor vital physiological functions as indicated
Recognise and rapidly respond to adverse trends in monitored parameters
Recognise and manage choking / obstructed airway
Implement emergency airway management and ventilation
Demonstrate emergency relief of tension pneumothorax
Assess, predict and manage circulatory shock
Obtain vascular access sufficient to manage acute haemorrhage, rapid fluid infusion and monitor cardiovascular variables
Initiate emergency external cardiac pacing
Respond to an emergency in a positive, organised and effective manner.
Participate in timely discussion and regular review of ‘do not attempt resuscitation’ orders and treatment limitation decisions
Perform a comprehensive secondary survey; integrate history with clinical examination to form a differential diagnosis.
Evaluate evidence for diagnoses already made and search for other diagnoses.
Prescribe appropriate analgesia
Examine and plan care for the confused patient

1.3 Manages the patient post-resuscitation

Knowledge
Causes of cardio-respiratory arrest, identification of patients at risk and corrective treatment of reversible causes

Causes, recognition and management of:
- Upper and lower airway obstruction
- Tachypnoea and dyspnoea
- Hypoxaemia
- Pneumothorax (simple and tension)
- Acute chest pain
- Pulmonary oedema
- Hypotension
- Shock states
- Anaphylactic and anaphylactoid reactions
- Hypertensive emergencies
- Acute confusional states and altered consciousness
- Acute seizures / convulsions
- Oliguria and anuria
- Acute disturbances in thermoregulation
- Peri-arrest arrhythmias and the principles of their management (bradycardia, broad complex tachycardia, atrial fibrillation, narrow complex tachycardia)

Techniques for effective fluid resuscitation
Indications for and methods of ventilatory support
Indications, dosages and actions of drugs used in the peri-arrest period
Indications and methods of cardiac pacing in the peri-arrest setting
Effect of cardio-respiratory arrest on body systems
Principles and application of therapeutic hypothermia
Measures of adequacy of tissue oxygenation, e.g. base deficit, lactate, central venous saturation
Treatment strategies for abnormalities of fluid, electrolyte, acid-base and glucose balance
Criteria for admission to, and discharge from ICU - factors influencing intensity and site of care (ward, high dependency unit (HDU), intensive care unit (ICU))

Skills
Implement emergency airway management and ventilation
Assess conscious level, status of airway and cervical spine, and conduct careful systems review
Monitor vital physiological functions as indicated
Recognise and rapidly respond to adverse trends in monitored parameters
Obtain vascular access sufficient to manage acute haemorrhage, rapid fluid infusion and monitor cardiovascular variables
Demonstrate emergency relief of tension pneumothorax
Respond to an emergency in a positive, organised and effective manner.
Participate in timely discussion and regular review of ‘do not attempt resuscitation’ orders and treatment limitation decisions
Assess, predict and manage circulatory shock
Consider the need for and implement pre-transfer stabilisation

1.4 Triages and prioritises patients appropriately, including timely admission to ICU

Knowledge
Early warning signs of impending critical illness
Causes of cardio-respiratory arrest, identification of patients at risk and corrective treatment of reversible causes
Clinical signs associated with critical illness, their relative importance and interpretation
Clinical severity of illness and indications when organ dysfunctions or failure are an immediate threat to life
Indications for not starting resuscitation or ceasing an initiated attempt
Relevance of prior health status in determining risk of critical illness and outcomes
Triage and management of competing priorities
Criteria for admission to, and discharge from ICU - factors influencing intensity and site of care (ward, high dependency unit (HDU), intensive care unit (ICU))
Skills
Consider legal and ethical issues: patient autonomy, appropriateness of resuscitation and ICU admission.
Conduct a primary survey: obtain relevant information rapidly and accurately
Assess conscious level, status of airway and cervical spine, and conduct careful systems review
Recognise and rapidly respond to adverse trends in monitored parameters
Respond to an emergency in a positive, organised and effective manner.
Participate in timely discussion and regular review of ‘do not attempt resuscitation’ orders and treatment limitation decisions
Consider legal and ethical issues: patient autonomy, appropriateness of resuscitation and ICU admission.
Assess and communicate effectively the risks and benefits of intensive care admission
Take decisions to admit, discharge or transfer patients
Explain life-sustaining therapies, in clear language, and describe the expected outcome of such therapies in view of the patient’s goals and wishes.
Discuss treatment options with a patient or relatives before ICU admission
Determine when the patient’s needs exceed local resources or specialist expertise (requirement for transfer)

1.5 Assesses and provides initial management of the trauma patient

Knowledge
Performance and interpretation of a primary and secondary survey
Environmental hazards and injuries: hypo- and hyperthermia, near-drowning, electrocution, radiations, chemical injuries, electrical safety/micro shock
Effects and acute complications of severe trauma on organs and organ systems:
- Respiratory – thoracic trauma; acute lung injury; tension pneumothorax
- Cardiovascular – hypovolaemic shock; cardiac tamponade
- Renal – acute renal failure; rhabdomyolysis
- Neurological – altered consciousness; traumatic brain injury; post-anoxic brain injury; coup and contra-coup injuries; extra-dural and sub-dural haematomas; intracranial haemorrhage and infarction; spinal cord injury
- Gastrointestinal – abdominal trauma; abdominal tamponade; rupture of liver or spleen
- Musculoskeletal system – soft tissue injury; short term complications of fractures; fat embolism; crush injury and compartment syndromes; maxillofacial injuries
Relevance of mechanism of injury to clinical presentation
Secondary insults that potentiate the primary injury
Immediate specific treatment of life-threatening injury
Methods for securing vascular access rapidly
Surface anatomy: structures in the antecubital fossa; large veins and anterior triangle of the neck; large veins of the leg and femoral triangle
Intraosseous cannulation
Causes, recognition and management of shock states
Techniques for effective fluid resuscitation
Principles of blood and blood component therapy; principles of massive transfusion, including sell salvage
Principles of emergency airway management (see 5.3)
Indications for and methods of ventilatory support
Triage and management of competing priorities
Management of cervical spine injuries
Principles of management of closed head injury; coup and contra-coup injuries; methods of preventing ‘secondary insult’ to the brain; recognition and immediate management of raised intracranial pressure
Management of severe acute haemorrhage and blood transfusion; correction of coagulation disorders
Methods for assessing neurological function e.g. Glasgow Coma Scale
Principles, including indications, limitations and therapeutic modalities of:
- Basic radiological methods, CT scanning, ultrasound, MRI, ultrasound, angiography and radionucleotide studies) in the critically ill patient
- Indications for and basic interpretation of chest radiographs: range of normal features on a chest x-ray; collapse, consolidation, infiltrates (including ALI/ARDS), pneumothorax, pleural effusion, pericardial effusion, position of cannulae, tubes or foreign bodies, airway compression, cardiac silhouette, mediastinal masses
Principles of outcome prediction / prognostic indicators and treatment intensity scales; limitations of scoring systems in predicting individual patient outcome
Skills
Conduct a primary survey: obtain relevant information rapidly and accurately
Assess and document Glasgow Coma Scale (GCS)
Implement emergency airway management and ventilation
Conduct a primary survey: obtain relevant information rapidly and accurately
Assess conscious level, status of airway and cervical spine, and conduct careful systems review
Monitor vital physiological functions as indicated
Demonstrate emergency relief of tension pneumothorax
Prescribe appropriate analgesia
Prioritise the order of investigations and interventions for individual injuries according to their threat to life
Protect a potentially unstable cervical spine
Determine when the patient’s needs exceed local resources or specialist expertise (requirement for transfer)

1.6 Assesses and provides initial management of the patient with burns

Knowledge
Triage and management of competing priorities
Performance and interpretation of a primary and secondary survey
Environmental hazards and injuries: hypo- and hyperthermia, near-drowning, electrocution, radiations, chemical injuries, electrical safety/micro shock
Relevance of mechanism of injury to clinical presentation
Pathophysiology and medical/surgical management of the phases of a burn injury
Calculation of area burned
Principles of calculation of fluid losses and fluid resuscitation in the burned patient
Treatment strategies for abnormalities of fluid, electrolyte, acid-base and glucose balance
Causes, recognition and management of shock states
Methods for securing vascular access rapidly
Surface anatomy: structures in the antecubital fossa; large veins and anterior triangle of the neck; large veins of the leg and femoral triangle
Techniques for effective fluid resuscitation
Causes and recognition of acute airway obstruction
Indications for and methods of ventilatory support
Recognition and management of acute disturbances in thermoregulation
Signs, symptoms and causes of renal failure including acute kidney injury / chronic / acute on chronic) and indications for intervention
Respiratory complications of burn injuries (smoke inhalation, airway burns) - detection and management
Management of difficult or failed airway management (see 5.4)
The environmental control necessary for optimal care of the burned patient
Prevention of infection in the burned patient
Burn-related compartment syndrome and escharotomy
Principles of outcome prediction / prognostic indicators and treatment intensity scales; limitations of scoring systems in predicting individual patient outcome

Skills
Conduct a primary survey: obtain relevant information rapidly and accurately
Monitor vital physiological functions as indicated
Monitor emergency airway management and ventilation
Obtain vascular access sufficient to manage acute haemorrhage, rapid fluid infusion and monitor cardiovascular variables
Assess, predict and manage circulatory shock
Prescribe appropriate analgesia
Assess burn severity and prescribe initial fluid resuscitation
Describe the endpoints of burn resuscitation and preferred fluids
Recognise the potential for airway compromise in the burned patient
Identification and management of carbon monoxide poisoning
Estimate burn wound mortality from published data tables
Determine when the patient’s needs exceed local resources or specialist expertise (requirement for transfer)
Provide specialist advice before transfer to specialist cardiac or neuro ICU

Domain 2: Diagnosis, Assessment, Investigation, Monitoring and Data Interpretation

General Principles

It is very easy to acquire large amounts of data in modern medical practice. The challenge is to acquire appropriate data and convert it into information, essential steps on the pathway to diagnosis and treatment. Monitoring devices combine the functions of clinical investigation with surveillance.

Clinical investigations are forms of hypothesis testing; they bring burdens and occasional risks for patients, as well as additional costs and work for the investigating clinician and laboratory staff. Their utility, safety and accuracy must be balanced against these factors.

Features of competent performance may include:

- Recognition of clinical signs and symptoms
- Planning and prioritisation of investigations and monitoring – appropriate; timely
- Safe use of equipment / devices
- Obtain data effectively
- Interpret data in clinical context
- Effective clinical decision making supported by critical thinking and reflection
- Accurate differential diagnosis on basis of information available: review in light of clinical changes
- Effective team-working: planning and interpretation of investigations
- Appropriate referral / consultation / further investigation
- Recognition of limitations (self and others)
- Attention to patient safety

Domain 2: Competencies

The competences which make up the syllabus for this domain are listed below, with mapping to possible assessment methods and Good Medical Practice.

<table>

Domain 2: Syllabus

This is a detailed list of items which describe the depth and breadth of knowledge, skills and attitudes which make up the above competences. These items are not intended to be assessed individually but only as part of an assessment of the relevant competence, and have therefore not been individually mapped.
### Knowledge, skills and attitudes common to all competencies

#### Knowledge

Universal precautions and preventative infection control techniques (hand washing, gloves, protective clothing, sharps disposal etc.)

Principles of aseptic technique and aseptic handling of invasive medical devices

#### Skills

Acquire, interpret, synthesize, record, and communicate (written and verbal) clinical information

Document investigations undertaken, results and action taken

Order and prioritise appropriate investigations

Develop a working, and limited differential diagnosis based on presenting clinical features

Professional and reassuring approach - generates confidence and trust in patients and their relatives

Lead, delegate and supervise others appropriately according to experience and role

Consults, communicates and collaborates effectively with patients, relatives and the health care team

#### Attitudes

Responds rapidly to acute changes in monitored variables

Considers patient comfort during procedures / investigations

Avoids unnecessary tests

Avoids extensive invasive procedures or monitoring which cannot be adequately interpreted at the bedside

Minimises patient discomfort in relation to monitoring devices

Supports other staff in the correct use of devices

Demonstrates desire to minimise patient distress

Demonstrates compassionate care of patients and relatives

Promotes respect for patient privacy, dignity and confidentiality

Recognises personal limitations, seeks and accepts assistance or supervision (knows how, when and who to ask)

---

### 2.1 Obtains a history and performs an accurate clinical examination

#### Knowledge

Clinical signs associated with critical illness, their relative importance and interpretation

Importance and principles of obtaining an accurate history of the current condition, co-morbidities and previous health status using appropriate sources of information

Sources and methods of obtaining clinical information

Relevance of prior health status in determining risk of critical illness and outcomes

Impact of drug therapy on organ-system function

#### Skills

Examine patients, elicit and interpret clinical signs (or relevant absence of clinical signs) in the ICU environment

Obtain relevant information from the patient, relatives and other secondary sources.

Review notes, investigations and prior events to confirm or refute working diagnosis.

Listen effectively

Recognise impending organ system dysfunction

Integrate history with clinical examination to create a diagnostic and therapeutic plan

---

### 2.2 Undertakes timely and appropriate investigations

#### Knowledge

Indications for and the selection of suitable methods of monitoring or investigation taking into account their accuracy, convenience, reliability, safety, cost and relevance to the patient’s condition.

Sensitivity and specificity of the investigation as related to a specific disease

Appropriate use of laboratory tests to confirm or refute a clinical diagnosis

Indications, limitations and basic interpretation of laboratory investigations of blood and other body fluids (e.g. urine, CSF, pleural and ascitic fluids):

- Haematology
- Immunology
- Cytology
- Blood grouping and x-matching
- Urea, creatinine, glucose, electrolytes and lactate
- Liver function tests
- Drug levels in blood or plasma
- Tests of endocrine function (diabetes, thyroid disorders, adrenal failure)
- Blood gas samples (arterial, venous and mixed venous)
- Microbiological surveillance and clinical sampling

**Principles, indications, limitations and basic interpretation of:**
- Respiratory function tests
- Diagnostic bronchoscopy
- Diagnostic ECG (EKG)
- Echocardiography
- Electroencephalogram (EEG) and evoked potentials
- Intra-abdominal pressure monitoring
- Intrathoracic pressure (oesophageal pressure) measurements
- Fluid input-output monitoring

**Skills**
- Recognise impending organ system dysfunction
- Evaluate benefits and risks related to specific investigations
- Interpret laboratory results in the context of the patient’s condition
- Identify abnormalities requiring urgent intervention
- Recognise significant changes and the need for repeated testing (i.e. that a single normal result is not as significant as identifying trends of change by repeated testing where indicated)
- Undertake further consultation / investigation when indicated

### 2.3 Performs electrocardiography (ECG / EKG) and interprets the results

**Knowledge**
- Principles of ECG monitoring (heart rate, rhythm, conduction, ST segment change and QT interval) – indications, limitations and techniques. Advantages and disadvantages of different lead configurations
- Sensitivity and specificity of the investigation as related to a specific disease

**Skills**
- Obtain and interpret data from ECG (3- and 12-lead)
- Identify deviations from normal range and interpret these in the context of the clinical circumstances
- Identify abnormalities requiring urgent intervention
- Differentiate real change from artefact and respond appropriately

### 2.4 Obtains appropriate microbiological samples and interprets results

**Knowledge**
- Epidemiology and prevention of infection in the ICU
- Types of organisms – emergence of resistant strains, mode of transfer, opportunistic and nosocomial infections; difference between contamination, colonisation and infection
- Requirements for microbiological surveillance and clinical sampling
- Indications for microbiological sampling and interpretation of microbiological test results
- Sensitivity and specificity of the investigation as related to a specific disease
- Methods and routes of obtaining samples – associated indications and complications
- Appropriate use of laboratory tests to confirm or refute a clinical diagnosis
- Local patterns of bacterial resistance and antibiotic policy
- Indications for and contraindications to lumbar puncture and CSF sampling; laboratory analysis of CSF samples
### Skills
- Obtain blood cultures using aseptic techniques
- Interpret laboratory results in the context of the patient’s condition
- Integrate clinical findings with results of investigations
- Communicate and collaborate effectively with all laboratory staff
- Undertake further consultation / investigation when indicated
- Assemble clinical and laboratory data, logically compare all potential solutions to the patient’s problems, prioritise them and establish a clinical management plan

### 2.5 Obtains and interprets the results from blood gas samples

#### Knowledge
- Indications for and interpretation of arterial blood gas samples
- Methods and routes of obtaining samples - associated indications and complications
- Pre-analytical errors of arterial blood gas sampling (choice of sample site, sampling device, heparin, mixing, storage and transport)
- Clinical measurement: pH, pCO₂, pO₂, SaO₂, FiO₂, CO₂ production, oxygen consumption, respiratory quotient
- Sensitivity and specificity of the investigation as related to a specific disease

#### Skills
- Obtain blood gas samples using aseptic techniques
- Interpret data from an arterial blood gas sample
- Identify deviations from normal range and interpret these in the context of the clinical circumstances
- Confirm adequate oxygenation and control of PaCO₂ and pH
- Undertake further consultation / investigation when indicated

### 2.6 Interprets imaging studies

#### Knowledge
- Principles, including indications, limitations and therapeutic modalities of: Basic radiological methods, CT scanning, ultrasound
- Indications for and basic interpretation of chest radiographs: range of normal features on a chest x-ray; collapse, consolidation, infiltrates (including ALI/ARDS), pleural effusion, pericardial effusion, position of cannulae, tubes or foreign bodies, airway compression, cardiac silhouette, mediastinal masses
- Risks to patient and staff of radiological procedures and precautions to minimise risk
- Indications for and limitations of investigations
- Sensitivity and specificity of the investigation as related to a specific disease
- Effect of projection, position, penetration and other factors on the image quality
- Principles, including indications, limitations and therapeutic modalities of: MRI, ultrasound, angiography and radionucleotide studies in the critically ill patient

#### Skills
- Interpret chest x-rays in a variety of clinical contexts
- Basic interpretation of radiological investigations:
  - neck and thoracic inlet films
  - x-rays of abdominal fluid levels / free air
  - x-rays of long bone, skull; vertebral and rib fractures
  - CT or MRI scans of head demonstrating fractures, haemorrhage, critically raised ICP and hydrocephalus
  - Ultrasonography of the abdomen (liver, spleen, large abdominal vessels, kidney, urinary bladder)
  - Echocardiography (ventricular function, filling status, valve abnormality, size of the heart, any kinetic or dyskentic segments, pericardial effusion with or without evidence of tamponade)
- Identify abnormalities requiring urgent intervention
- Identify deviations from normal and interpret these in the context of the clinical circumstances
- Undertake further consultation / investigation when indicated
- Communicate effectively with radiological colleagues to plan, perform and interpret test results
2.7 Monitors and responds to trends in physiological variables

Knowledge

Indications, contraindications and complications associated with monitoring and monitoring devices; advantages and disadvantages of different monitoring systems / modalities taking into account their accuracy, convenience, reliability, safety, cost and relevance to the patient’s condition

Interpretation of information from monitoring devices, and identification of common causes of error; principles of monitoring trends of change and their significance

Hazards of inappropriate monitoring including misuse of alarms; principles of disconnection monitors

Principles of invasive pressure monitoring devices: components and functions of an electromanometer system (catheter, tubing, transducer, amplifier and display unit); zero and calibration techniques; dynamics of the system - natural frequency and damping

Principles of haemodynamic monitoring - invasive and non invasive methods, indications and limitations, physiological parameters and waveform interpretation

Invasive and non-invasive systems available for measuring cardiac output and derived haemodynamic variables, the principles involved and the type and site of placement of the monitoring device

Interpretation of, relationships between, sources of error and limitations of measured and derived cardiovascular variables including pressure, flow, volume and gas transport

Methods for measuring temperature

Principles, indications and limitations of pulse oximetry

Principles of ECG monitoring (heart rate, rhythm, conduction, ST segment change and QT interval) - indications, limitations and techniques. Advantages and disadvantages of different lead configurations

Principles of monitoring ventilation:
Significance of respiratory rate, tidal volume, minute volume, mean, peak, end expiratory and plateau pressure, intrinsic and extrinsic PEEP, inspired oxygen concentration, arterial blood gas and acid base status, relationship between mode of ventilation and choice of parameters monitored; airflow and airway pressure waveforms

Physical principles, indications and limitations of end tidal CO\textsubscript{2} monitoring. Relationship between end tidal CO\textsubscript{2} and arterial pCO\textsubscript{2} in various clinical circumstances

Principles of fluid input-output monitoring

Methods for assessing pain and sedation

Methods for assessing neurological function e.g. Glasgow Coma Scale

Principles, indications and limitations of intra-abdominal pressure monitoring

Systems available for intracranial pressure monitoring – indications, principles, type and site of placement of the monitoring device, data collection and trouble-shooting

Indications and techniques of jugular bulb oximetry

Skills

Monitor vital physiological functions as indicated

Obtain and accurately record data from monitors

Differentiate real change from artefact and respond appropriately

Set and interpret data from ventilator alarms

Identify deviations from normal range and interpret these in the context of the clinical circumstances

Recognise and rapidly respond to adverse trends in monitored parameters

Recognise patterns in trends - early diagnosis and outcome prediction

Review the need for continued monitoring regularly

Obtain and interpret data from:

- invasive and non-invasive arterial blood pressure measurement
- ECG / EKG (3 and 12 lead)
- central venous catheters
- pulse oximetry
- FVC, spirometry and peak flow measurement
- pulmonary artery catheter or oesophageal Doppler
- inspired and expired gas monitoring for O2, CO2 and NO
- intracranial pressure monitoring
- Jugular bulb catheters and SjvO\textsubscript{2} monitoring

Set monitor alarms appropriately

Interpret data from scoring or scaling systems to assess pain and sedation

Assess and document Glasgow Coma Scale (GCS)

Recognise changes in intracranial pressure and cerebral perfusion pressure which are life threatening
### 2.8 Integrates clinical findings with laboratory investigations to form a differential diagnosis

**Knowledge**
- Sensitivity and specificity of the investigation as related to a specific disease
- Appropriate use of laboratory tests to confirm or refute a clinical diagnosis
- Interpretation of information from monitoring devices, and identification of common causes of error; principles of monitoring trends of change and their significance

**Skills**
- Obtain relevant information from the patient, relatives and other secondary sources
- Examine patients, elicit and interpret clinical signs (or relevant absence of clinical signs) in the ICU environment
- Integrate clinical findings with results of investigations
- Interpret laboratory results in the context of the patient’s condition
- Identify abnormalities requiring urgent intervention
- Communicate and collaborate effectively with all laboratory staff
- In emergency situations, confirm or refute early diagnoses before data collection / analysis is complete - make contingency plans based on these diagnoses to combat further threats to the patient’s life
- Assemble clinical and laboratory data, logically compare all potential solutions to the patient’s problems, prioritise them and establish a clinical management plan
Domain 3: Disease Management

General Principles

Diagnostic accuracy determines therapeutic specificity. Although in the early phases of managing an acutely ill patient, physiological safety and support are the main issues, making the correct diagnosis and providing the right treatment will determine the patient’s outcome. Disease management therefore requires skills in integrating clinical information with laboratory data, and applying ‘best practice’ guidelines promptly and effectively. It also involves regular clinical review with revision of diagnostic possibilities and modification of treatment according to patient response. The possibility of incomplete, partial or incorrect diagnosis should be borne in mind when reviewing and particularly if the patient is deteriorating alternative diagnoses should be sought.

Features of competent performance may include:

- Recognition of clinical signs and symptoms
- Identification of main acute complications and management
- Planning and prioritisation of investigations and monitoring – appropriate; timely
- Appropriate differential diagnosis with regular review and update
- Clear decision making and plan of management (including application of relevant protocols / guidelines / care bundles)
- Effective team-working: collaboration, communication and continuity of care
- Professional relationship with patient and relatives: communication; interpersonal skills; attention to patient comfort; ethical principles
- Appropriate referral / consultation
- Recognition of limitations (self and others)

Domain 3: Competencies

The competences which make up the syllabus for this domain are listed below, with mapping to possible assessment methods and Good Medical Practice.

Recognises life-threatening maternal peripartum complications and manages care under

**Domain 3: Syllabus**

This is a detailed list of items which describe the depth and breadth of knowledge, skills and attitudes which make up the above competences. These items are not intended to be assessed individually but only as part of an assessment of the relevant competence, and have therefore not been individually mapped.

### Knowledge, skills and attitudes common to all competencies

**Knowledge**
- Impact of occupational and environmental exposures, socio-economic factors, and life style factors on critical illness
- Recognises the importance of timely institution of organ-system support
- Recognises the differences between organ system support and specific treatment

**Skills**
- Acquire, interpret, synthesize, record, and communicate (written and verbal) clinical information
- Order and prioritise appropriate investigations
- Develop a working, and limited differential diagnosis based on presenting clinical features
- Prioritise therapy according to the patient’s needs
- Define targets of therapy and review efficacy at regular intervals
- Consider modifying diagnosis and/or therapy if goals are not achieved or in light of new information
- Recognise and manage emergencies; seek assistance appropriately
- Critically appraise the evidence for and against specific therapeutic interventions or treatments
- Lead, delegate and supervise others appropriately according to experience and role
- Consults, communicates and collaborates effectively with patients, relatives and the health care team

**Attitudes**
- Adopts a problem solving approach
- Demonstrates compassionate care of patients and relatives
- Demonstrates desire to minimise patient distress
- Recognises personal limitations, seeks and accepts assistance or supervision (knows how, when and who to ask)
- Enquiring mind, undertakes critical analysis of published literature

### Acute Disease

**3.1 Manages the care of the critically ill patient with specific acute medical conditions**

**Knowledge**
- Pathophysiology, diagnosis and management of commonly encountered acute medical conditions including:

  **Respiratory disorders:**
  - The unprotected airway; pneumonia, lung or lobar collapse, asthma, chronic obstructive airways disease, pulmonary oedema, pneumothorax (simple and tension), pulmonary embolus, pleural effusion, acute lung injury (ALI) and acute respiratory distress syndrome (ARDS) and their causative factors; pulmonary haemorrhage, upper and lower airway obstruction including epiglotitis; respiratory muscle disorders

  **Cardiovascular disorders:**
  - Common arrhythmias and conduction disturbances, shock states (anaphylactic, cardiogenic, hypovolaemic, septic); crescendo or unstable angina; acute myocardial infarction; left ventricular failure; hypotension and hypertension, valvular heart disease; vaso-occlusive diseases; pulmonary hypertension; right ventricular failure; cor pulmonale; malignant hypertension; cardiac tamponade; pacing box failure, cardiomyopathies

  **Neurological disorders:**
  - Acute confusional states and coma; post-anoxic brain damage; intracranial haemorrhage and infarction; sub-arachnoid haemorrhage; cerebro-vascular accidents (CVA / stroke); convulsions and status epilepticus; meningitis and encephalitis, Medical causes of raised intracranial pressure; acute neuromuscular diseases causing respiratory difficulty (e.g. Guillain-Barre, myasthenia gravis, malignant hyperpyrexia); critical illness polyneuropathy, motor neuropathy and myopathy

  **Renal and genito-urinary disorders:**
  - Urological sepsis; acute kidney injury; chronic renal failure; nephrotoxic drugs and monitoring, renal manifestations of systemic disease including vasculitides; rhabdomyolysis
**Gastrointestinal disorders:**
- Peptic/stress ulceration; upper GI haemorrhage; diarrhoea and vomiting; acute pancreatitis; cholecystitis; jaundice; acute and chronic liver failure; fulminant hepatic failure; paracetamol (acetaminophen)-induced liver injury; inflammatory bowel diseases; peritonitis; ascites; mesenteric infarction; perforated viscus; bowel obstruction and pseudo-obstruction; abdominal trauma; intra-abdominal hypertension and compartment syndrome; short-bowel syndrome; rupture of liver or spleen.

**Haematological and oncological disorders:**
- Disseminated intravascular coagulation (DIC) and other coagulation disorders, Massive blood transfusion, acute and chronic anemia; haemolytic syndromes, immune disorders. Lymphoproliferative disorders. High risk groups: the immunosuppressed or immunoincompetent patient, chemotherapy, agranulocytosis and bone marrow transplant patients.

**Infections:**
- Organisms causing specific infections: Gram positive and Gram negative bacteria, fungi, protozoa, viruses, pyrexia and hypothermia; organ-specific signs of infection including haematogenous (venous catheterrelated, endocarditis, meningococcal disease), urological, pulmonary, abdominal (peritonitis, diarrhoea), skeletal (septic arthritis), nosocomial infections, pyometria; septic abortion

**Metabolic disorders:**
- Electrolyte disorders; acid-base disorders; fluid-balance disorders; thermoregulation and associated disorders

**Endocrine disorders:**
- Diabetes mellitus, critical illness-induced hyperglycaemia, over- and under-activity of thyroid; adrenal and pituitary disorders; sepsis-induced relative adrenal insufficiency; endocrine emergencies;

**Treatment algorithms for common medical emergencies**
- Multisystem effects of acute medical conditions and implications for clinical management
- Therapies available for the treatment of commonly encountered medical conditions, their efficacy and potential side-effects
- Definitive / long term management of commonly encountered acute medical conditions
- Diagnosis and management of other acute medical conditions until appropriate specialist assistance is available
- Indications and contraindications for treatment; circumstances when treatment is unnecessary or futile
- Concept of risk : benefit ratio and cost effectiveness of therapies
- Complications of the disease processes; effects of disease and its treatments on other organ systems
- Effects of concomitant treatment and/or co-morbid conditions on an individual patient's response to treatment
- Principles of outcome prediction / prognostic indicators and treatment intensity scales; limitations of scoring systems in predicting individual patient outcome
- Long term effects of acute medical conditions and late complications
- Risk factors, recognition and assessment of single or multiple organ failure
- Define the steps of diagnostic reasoning
- Conceptualise the clinical problem
- Develop problem list and action plan

**Skills**
- Recognise and diagnose commonly encountered acute medical conditions
- Recognise impending organ system dysfunction
- Establish a management plan based on clinical and laboratory information
- Consider potential interactions when prescribing drugs and therapies
- Identify and manage chronic co-morbid disease

**Chronic Disease**

**3.2 Identifies the implications of chronic and co-morbid disease in the acutely ill patient**

**Knowledge**
- Pathophysiology, diagnosis and management of commonly encountered chronic medical conditions including:
  - **Respiratory disorders:**
    - Asthma; chronic obstructive airways disease; pulmonary fibrosis; pulmonary thromboembolic disease; respiratory muscle disorders
  - **Cardiovascular disorders:**
    - Hypertension; angina; chronic heart failure (LVF / RVF); veno-occlusive disorders; cardiomyopathies; valvular heart disease and prosthetic valves; pulmonary hypertension; cor pulmonale; common arrhythmias and conduction

### 3.4 Recognises and manages the patient with, or at risk of, acute renal failure

**Knowledge**

- Symptoms, signs and causes of renal failure including acute kidney injury / chronic / acute on chronic and indications for intervention
- Distinguishing features of acute versus chronic renal failure and implications for management
- Causes and complications of renal failure - methods to prevent or treat these

**Renal and genito-urinary disorders:**
- Oliguria and anuria; polyuria; urological sepsis; acute renal failure; chronic renal failure; nephrotoxic drugs and monitoring; renal manifestations of systemic disease including vasculitides; rhabdomyolysis

**Metabolic disorders:** electrolyte disorders (notably hyperkalaemia); acid-base disorders; fluid balance disorders

- Investigation of impaired renal function
- Range of therapeutic interventions available to support organ function and treat the underlying causes
- Nephrotoxic drugs and adjustment of drug doses in renal impairment/failure
- Indications for and basic interpretation of drug concentrations in blood or plasma
- Urinary catheterisation techniques: transurethral and suprapubic
- Indications and contraindications for treatment; circumstances when treatment is unnecessary or futile
- Effects of concomitant treatment and/or co-morbid conditions on an individual patient's response to treatment
- Indications, complications and selection of renal replacement therapies (continuous and intermittent)

**Effect of renal failure and its treatment on other organ systems**

- Principles of outcome prediction / prognostic indicators and treatment intensity scales; limitations of scoring systems in predicting individual patient outcome

**Skills**

- Identify patients at risk of developing renal failure
- Establish a management plan based on clinical and laboratory information
- Consider potential interactions when prescribing drugs and therapies
- Perform aseptic urinary catheterisation: male and female (see 5.24)
- Identify and avoid factors contributing to impaired renal function
- Initiate, manage and wean patients from renal replacement therapy (see 4.7)

### 3.5 Recognises and manages the patient with, or at risk of, acute liver failure

**Basic Science**

**Knowledge**

- Functions of the liver - biosynthetic, immunologic, and detoxification
- Symptoms and signs of acute liver failure and assessment of severity
- Investigation of impaired hepatic function
- Causes and complications of acute and acute-on-chronic liver failure, their prevention and management
- Causes, recognition and management of associated disorders:
  - **Gastrointestinal disorders:**
    - Abdominal pain and distension; peptic ulceration and upper GI haemorrhage; diarrhoea and vomiting; pancreatitis; jaundice; acute and chronic liver failure; fulminant hepatic failure; paracetamol (acetaminophen)-induced liver injury; rupture of liver or spleen
  - **Cardiovascular disorders:**
    - Hypotension and hypertension (including hypertensive emergencies); shock (cardiogenic, hypovolaemic, septic, anaphylactic); common arrhythmias and conduction disturbances.
  - **Metabolic disorders:**
    - Electrolyte disorders; acid-base disorders; fluid-balance disorders; thermoregulation and associated disorders
  - **Haematological disorders:**
    - Coagulation and fibrinolytic pathways and their associated disorders; disseminated intravascular coagulation (DIC); hemolytic syndromes, acute anaemia; complications of massive blood transfusion
  - **Neurological disorders:**
    - acute confusional states and coma; post-anoxic brain damage; convulsions; encephalopathy; raised intracranial pressure
- Pathogenesis of multiple organ dysfunction (MODS) and the inflammatory response in relation to organ system dysfunction
Methods for assessing neurological function e.g. Glasgow Coma Scale
Indications for and basic interpretation of drug concentrations in blood or plasma
Principles of blood glucose control: indications, methods, monitoring of safety and efficacy
Indications and contraindications for treatment; circumstances when treatment is unnecessary or futile
Principles of cerebral perfusion pressure, cerebral oxygen delivery and the methods by which they may be optimised
Factors and therapies which may influence intracranial pressure and cerebral perfusion pressure
Hepatotoxic drugs and adjustment of drug doses in hepatic impairment / failure
Principles and techniques for insertion of gastro-oesophageal balloon tamponade tube (e.g. Sengstaken-Blakemore)
Causes, recognition and management of HELLP syndrome
Effect of liver failure and its treatment on other organ systems
Principles of outcome prediction / prognostic indicators and treatment intensity scales; limitations of scoring systems in predicting individual patient outcome
Supportive therapy for the failing liver including extracorporeal liver support and indications for emergency liver transplantation
Principles of measurement of jugular venous saturation, cerebral Doppler velocities and cerebral blood flow.
Indications for transcutaneous and transjugular liver biopsies and transjugular intrahepatic portosystemic shunt (TIPSS)
Effects, common presentations and potential for harm of alcohol and other drugs.
Range of interventions, treatments and prognoses for use of alcohol and other drugs.

Skills
Identify patients at risk of developing acute liver failure
Interpret laboratory tests of liver function
Recognise impending organ system dysfunction
Establish a management plan based on clinical and laboratory information
Consider potential interactions when prescribing drugs and therapies
Assess and document Glasgow Coma Scale (GCS)
Identify and manage coagulopathies
Prevent, identify and manage hyper / hypoglycaemia
Examine and plan care for the confused patient
Take prompt action to reduce acutely elevated intracranial pressure
Manage cardiorespiratory physiology to minimise rises in intracranial pressure
Prevent, identify and treat hyponatraemia
Make an assessment of alcohol and other drug use, including taking a history and using validated tools.

3.6 Recognises and manages the patient with neurological impairment

Knowledge
Signs and symptoms of neurological impairment
The toxic, metabolic, structural, and infectious causes of altered consciousness
Investigation of impaired neurological function; methods for assessing neurological function (e.g. Glasgow Coma Scale)

Neurological disorders:
acute confusional states and coma; post-anoxic brain damage; intracranial haemorrhage and infarction; sub-arachnoid haemorrhage; cerebro-vascular accidents (CVA / stroke); convulsions and status epilepticus; meningitis and encephalitis; medical causes of raised intracranial pressure; acute neuromuscular diseases causing respiratory difficulty (e.g. Guillain-Barre, myasthenia gravis, malignant hyperpyrexia); critical illness polyneuropathy, motor neuropathy and myopathy

Causes, recognition and management of associated disorders:

Metabolic disorders:
Electrolyte disorders; acid-base disorders; fluid-balance disorders; thermoregulation and associated disorders

Signs and symptoms of acute airway insufficiency and acute respiratory failure; indications for intervention in the patient with neurological impairment

Indications, contraindications and complications of lumbar puncture (see 5.15)

Indications for urgent imaging of the brain and neurosurgical consultation

Indications and contraindications for treatment; circumstances when treatment is unnecessary or futile

Effects of concomitant treatment and/or co-morbid conditions on an individual patient’s response to treatment

Principles of cerebral perfusion pressure, cerebral oxygen delivery and the methods by which they may be optimised

Factors and therapies which may influence intracranial and cerebral perfusion pressure

Aetiology and management of raised intracranial pressure (ICP)
Principles of management of closed head injury including indications for decompressive craniectomy

Coup and contra-coup injuries

Methods of preventing the 'second insult' to the brain

Management of vasospasm

Application of techniques to treat or induce hypo/hyperthermia

Principles, indications and limitations of electroencephalogram (EEG) and evoked potentials

Effect of impaired neurological function and its support and treatment on other organ systems

Principles of outcome prediction / prognostic indicators and treatment intensity scales; limitations of scoring systems in predicting individual patient outcome

Systems available for intracranial pressure monitoring - indications, principles, type and site of placement of the monitoring device, data collection and trouble-shooting

Cerebral spinal fluid (CSF) drainage for raised ICP (lumbar drain and extraventricular drain)

Principles of measurement of jugular venous saturation, cerebral Doppler velocities and cerebral blood flow.

Indications for plasmapheresis or immunoglobulins in Guillain Barre and myasthenic patients (see 4.3)

Use of thiopentone infusions to induce deep coma

Skills

Identify patients at risk of neurological impairment

Identify and avoid factors contributing to neurological impairment

Assess and document Glasgow Coma Scale (GCS)

Establish a management plan based on clinical and laboratory information

Perform a lumbar puncture

Examine and plan care for the confused patient

Recognise changes in intracranial pressure and cerebral perfusion pressure which are life threatening

Take prompt action to reduce acutely elevated intracranial pressure

Manage cardiorespiratory physiology to minimise rises in intracranial pressure

Undertake or assist in the insertion and maintenance of an intracranial pressure monitor

Obtain and interpret data from intracranial pressure monitoring

Determine when the patient’s needs exceed local resources or specialist expertise (requirement for transfer)

Consider potential interactions when prescribing drugs and therapies

3.7 Recognises and manages the patient with acute gastrointestinal failure

Knowledge

Signs and symptoms of gastrointestinal dysfunction (obstruction, ischemia, perforation, dysmotility)

Causes and complications of gastrointestinal failure

Effects of critical illness and treatments on gastric emptying

Investigation of acute gastrointestinal dysfunction

Gastrointestinal disorders: Abdominal pain and distension; stress/peptic ulceration and upper GI haemorrhage; lower GI bleeding; diarrhoea and vomiting; Pancreatitis; jaundice; cholecystitis; inflammatory bowel diseases; peritonitis; mesenteric infarction; perforated viscus; bowel obstruction; ascites; intra-abdominal hypertension & compartment syndrome; short-bowel syndrome, GI fistulae.

Causes, recognition and management of associated disorders:

Metabolic disorders: Electrolyte disorders; acid-base disorders; fluid-balance disorders; thermoregulation and associated disorders

Indications for urgent imaging and surgical consultation

Factors and therapies which may influence intra-abdominal pressure; aetiology and management of raised intra-abdominal pressure

Effects of impaired gastrointestinal function and its treatment on other organ systems

Principles of nutritional assessment and support (see 4.9)

Indications and contraindications for treatment; circumstances when treatment is unnecessary or futile

Effects of concomitant treatment and/or co-morbid conditions on an individual patient’s response to treatment

Principles and techniques for insertion of gastro-oesophageal balloon tamponade tube (e.g. Sengstaken-Blakemore)

Principles of outcome prediction / prognostic indicators and treatment intensity scales; limitations of scoring systems in predicting individual patient outcome

Skills

Identify and avoid factors contributing to gastrointestinal dysfunction

Identify patients at risk of gastrointestinal dysfunction
Prevent, identify and manage hyper / hypoglycaemia
Establish a management plan based on clinical and laboratory information
Consider potential interactions when prescribing drugs and therapies

### 3.8 Recognises and manages the patient with acute lung injury syndromes (ALI / ARDS)

#### Knowledge

- Symptoms and signs of acute airway insufficiency and acute respiratory failure, and indications for intervention
- Causes of respiratory failure, their prevention and management
- **Respiratory disorders:** Tachypnoea, dyspnoea, pneumonia, lung or lobar collapse, pulmonary oedema, pulmonary embolus, pleural effusion, pneumothorax (simple and tension), acute lung injury (ALI) and acute respiratory distress syndrome (ARDS) and their causative factors; pulmonary haemorrhage, near-drowning
- Pathogenesis of acute lung injury (ALI / ARDS)
- Pathogenesis of multiple organ dysfunction (MODS) and the inflammatory response in relation to organ system dysfunction
- Indications for and basic interpretation of chest radiographs: range of normal features on a chest x-ray; collapse, consolidation, infiltrates (including ALI/ARDS), pneumothorax, pleural effusion, pericardial effusion, position of cannulae, tubes or foreign bodies, airway compression, cardiac silhouette, mediastinal masses
- Indications for and methods of invasive and non-invasive mechanical ventilation
- Initial set-up and modification of ventilator settings according to the condition or response of the patient
- Potential adverse effects and complications of respiratory support and methods to minimise these
- Detection and management of haemo/pneumothorax (simple and tension)
- Lung protective ventilation for acute lung injury (ALI)
- Principles of weaning from mechanical ventilation and factors which may inhibit weaning
- Modes of mechanical ventilation - indications, contraindications and expected results of each mode (CMV, IRV, PRVC, HFOV, SIMV, PS, CPAP, BiPAP, NIV)
- Ventilator associated pneumonia: definition, pathogenesis and prevention
- Concept of risk : benefit ratio and cost effectiveness of therapies
- Principles of outcome prediction / prognostic indicators and treatment intensity scales; limitations of scoring systems in predicting individual patient outcome
- Pharmacological and non-pharmacological adjunct therapies for ALI
- Principles of extra-corporeal membrane oxygenation (ECMO)

#### Skills

- Identify patients at risk of acute lung injury (ALI / ARDS)
- Implement emergency airway management and ventilation
- Select the appropriate type and mode of ventilation for an individual patient
- Identify and avoid factors contributing to acute lung injury
- Plan, implement, review and adapt lung protective approach during mechanical ventilation
- Perform thoracocentesis and manage intercostal drains (see 5.7)
- Establish a management plan based on clinical and laboratory information
- Consider potential interactions when prescribing drugs and therapies
- Plan, perform and review lung recruitment manoeuvres

### 3.9 Recognises and manages the septic patient

#### Knowledge

- Pathogenesis, definitions and diagnostic criteria of sepsis, severe sepsis, septic shock and systemic inflammatory response syndrome (SIRS)
- Causes, recognition and management of sepsis-induced organ dysfunction; multisystem effects of sepsis and their impact on clinical management
- Pathogenesis of multiple organ dysfunction (MODS) and the inflammatory response in relation to organ system dysfunction
- Infection and its relation to the inflammatory response
- **Infections:** Organisms causing specific infections: Gram positive and Gram negative bacteria, fungi, protozoa, viruses, pyrexia and hypothermia; organ-specific signs of infection including haematogenous (venous catheter-related, endocarditis, meningococcal disease), urological, pulmonary, abdominal (peritonitis, diarrhoea), skeletal (septic arthritis) nosocomial
infections, pyometra; septic abortion

Techniques for effective fluid resuscitation
Use of fluids and vasoactive / inotropic / anti-arrhythmic drugs to support the circulation (see 4.4)
Indications, complications, interactions, selection, monitoring, and efficacy of common antimicrobial drugs (antibacterial, antifungal, antiviral, antiprotozoal, antihelmintics)
Principles of blood glucose control: indications, methods, monitoring of safety and efficacy
Occult indicators of sepsis
Sepsis mediators
Local patterns of bacterial resistance and antibiotic policy
Evidence based guidelines: sepsis care bundles - rationale and indications; principles of early goal-directed therapy
Indications and contraindications for treatment; circumstances when treatment is unnecessary or futile
Effects of concomitant treatment and/or co-morbid conditions on an individual patient's response to treatment
Detection and management of adrenocortical dysfunction
Concept of risk : benefit ratio and cost effectiveness of therapies
Prognostic implications of multiple systems dysfunction or failure
Safe use of therapies which modify the inflammatory response

Skills
Assess, predict and manage circulatory shock
Resuscitate a patient with septic shock using appropriate monitoring, fluid therapy and vasoactive agents
Manage antimicrobial drug therapy (see 4.2)
Obtain and interpret results of microbiological tests (see 2.5)
Establish a management plan based on clinical and laboratory information
Consider potential interactions when prescribing drugs and therapies
Prevent, identify and manage hyper / hypoglycaemia

3.10 Recognises and manages the patient following intoxication with drugs or environmental toxins

Knowledge
Symptoms and signs of acute intoxication associated with common intoxicants
Multisystem effects of acute intoxication and implications for clinical management
General supportive therapy and specific antidotes pertinent to individual intoxicants
Specific management of poisoning with aspirin, paracetamol/acetaminophen, paraquat, carbon monoxide, alcohol, ecstasy, tricyclic and quadricyclic antidepressants
Strategies to reduce absorption and enhance elimination (haemodialysis, haemoperfusion, gastric lavage and charcoal therapy): risks and benefits
Pharmacology of common intoxicants
Indications for and basic interpretation of drug concentrations in blood or plasma
Adequate and know how to contact National Poisons Information Bureau/Toxbase
Services available to patients and families to provide emotional or psychiatric support
Causes, recognition and management of associated disorders:
Cardiovascular disorders: drug induced arrhythmias and conduction disturbances
Respiratory disorders:
smoke inhalation or burned airway damage; carbon monoxide poisoning
Neurological disorders: drug induced neurological impairment
Renal disorders:
nephrotoxic drugs - monitoring & adjustment of drug doses in renal impairment / failure; rhabdomyolysis
Metabolic disorders: electrolyte disorders; acid-base disorders; fluid-balance disorders; thermoregulation and associated disorders
Gastrointestinal disorders:
drug induced liver injury; hepatotoxic drugs and adjustment of drug doses in hepatic impairment / failure; fulminant hepatic failure
Haematology: drug induced coagulopathy
Management of acute liver failure (see 3.5)
Implement emergency airway management and ventilation
Indications and contraindications for treatment; circumstances when treatment is unnecessary or futile
Effects of concomitant treatment and/or co-morbid conditions on an individual patient's response to treatment
Principles of outcome prediction / prognostic indicators and treatment intensity scales; limitations of scoring systems in predicting individual patient outcome

Indications and complications of hyperbaric oxygenation

**Skills**

- Establish a management plan based on clinical and laboratory information
- Interpret laboratory tests of liver function
- Consider potential interactions when prescribing drugs and therapies
- Assess and document Glasgow Coma Scale (GCS)
- Implement emergency airway management and ventilation
- Identify patients at risk of developing renal failure
- Identify patients at risk of developing acute liver failure
- Identify and manage coagulopathies
- Examine and plan care for the confused patient
- Determine when the patient’s needs exceed local resources or specialist expertise (requirement for transfer)

| Seek appropriate support and supervision in order to provide optimal patient care |
Domain 4: Therapeutic interventions / Organ support in single or multiple organ failure

General Principles

Skilled organ-system support including appropriate therapeutic interventions is the ‘housekeeping’ of intensive care practice, a necessary – but in itself insufficient – requirement for promoting survival from critical illness. The practical procedures associated with organ system support are considered in the next section.

Features of competent performance may include:

- Awareness of relevant applied anatomy, physiology and pharmacology
- Consider indications and contraindications of therapeutic intervention
- Consider alternative modes, methods and techniques
- Safe use of equipment / device / drugs
- Complications: prevention; identification; management; awareness of interactions between different forms of organ system support
- Clearly defined therapeutic strategy / care plan and goals of therapy
- Evaluation and modification of therapy according to clinical response
- Appropriate referral / consultation
- Recognition of limitations (self and others)
- Attention to patient safety

Domain 4: Competencies

The competences which make up the syllabus for this domain are listed below, with mapping to possible assessment methods and Good Medical Practice.

Domain 4: Syllabus

This is a detailed list of items which describe the depth and breadth of knowledge, skills and attitudes which make up the above competences. These items are not intended to be assessed individually but only as part of an assessment of the relevant competence, and have therefore not been individually mapped.

Knowledge, skills and attitudes common to all competencies

Knowledge

Recognise the roles of regulatory agencies involved in drug use, monitoring and licensing e.g. Committee on Safety of Medicines, National Institute for Clinical Excellence / Scottish Medicines Consortium, regional and hospital formulary
### Skills

- Prioritise therapy according to the patient's needs
- Recognise and manage emergencies; seek assistance appropriately
- Define targets of therapy and review efficacy at regular intervals
- Recognises the importance of resources when prescribing, including the role of a Drug Formulary and electronic prescribing systems
- Consider modifying diagnosis and/or therapy if goals are not achieved
- Obtain informed consent/assent from the patient where appropriate
- Critically appraise the evidence for and against specific therapeutic interventions or treatments
- Lead, delegate and supervise others appropriately according to experience and role

### Attitudes

- Responds rapidly to acute changes in monitored variables
- Consults, communicates and collaborates effectively with patients, relatives and the health care team skill
- Desire to minimise patient distress
- Demonstrates compassionate care of patients and relatives
- Respects the expressed wishes of competent patients, even when in conflict with the views of the physician
- Appreciates the differences between organ system support and specific treatment
- Appreciates the importance of timely institution of organ-system support
- Respects the ideas and beliefs of the patient and their family and their impact on decision making (does not impose own views)
- Recognises the need for supportive care for all organ systems whether failing / injured or not
- Recognises personal limitations, seeks and accepts assistance or supervision (knows how, when and who to ask)
- Participates in adverse drug event reporting mechanisms
- Remains up to date with therapeutic alerts, and responds appropriately

### 4.1 Prescribes drugs and therapies safely

#### Basic Science

#### Knowledge

- Physiology of fluid, electrolyte, acid-base and glucose control

#### Science

- Types of intermolecular bonds
- Laws of diffusion. Diffusion of molecules through membranes
- Solubility and partition coefficients
- Ionization of drugs
- Drug isomerism
- Protein binding
- Oxidation and reduction

- Drug uptake from: gastrointestinal tract, lungs, nasal, transdermal, subcutaneous, IM, IV, epidural and intrathecal routes
- Bioavailability
- Factors determining the distribution of drugs: perfusion, molecular size, solubility, protein binding.
- The influence of drug formulation on disposition
- Distribution of drugs to organs and tissues:
  - Body compartments
  - Influence of specialised membranes: tissue binding and solubility
  - Materno-foetal distribution
  - Distribution in CSF and extradural space
- Modes of drug elimination:
  - Direct excretion
  - Metabolism in organs of excretion: phase I and II mechanisms
  - Renal excretion and urinary pH
  - Non-organ breakdown of drugs
- Pharmacokinetic analysis:
  - Concept of a pharmacokinetic compartment
  - Apparent volume of distribution
• Orders of kinetics
• Clearance concepts applied to whole body and individual organs
• Simple 1 and 2 compartmental models: concepts of wash-in and washout curves
• Physiological models based on perfusion and partition coefficients
• Effect of organ blood flow: Fick principle
  Pharmacokinetic variation: influence of body size, sex, age, disease, pregnancy, anaesthesia, trauma, surgery, smoking, alcohol and other drugs
  Effects of acute organ failure (liver, kidney) on drug elimination
  Influence of renal replacement therapies on clearance of commonly used drugs
  Pharmacodynamics: concentration-effect relationships: hysteresis
  Pharmacogenetics: familial variation in drug response
  Adverse reactions to drugs: hypersensitivity, allergy, anaphylaxis, anaphylactoid reactions

  Dynamics of drug-receptor interaction.
  Agonists, antagonists, partial agonists, inverse agonists.
  Efficacy and potency. Tolerance.
  Receptor function and regulation.
  Metabolic pathways; enzymes; drug: enzyme interactions; Michaelis-Menten equation
  Enzyme inducers and inhibitors.
  Mechanisms of drug action
  Ion channels: types: relation to receptors. Gating mechanisms.
  Signal transduction: cell membrane/receptors/ion channels to intracellular molecular targets, second messengers
  Action of gases and vapours
  Osmotic effects. pH effects. Adsorption and chelation.
  Mechanisms of drug interactions:
  Inhibition and promotion of drug uptake. Competitive protein binding. Receptor inter-actions.
  Effects of metabolites and other degradation products.

Knowledge
Mode of action of drugs (see Basic Sciences)
Pharmacokinetics and pharmacodynamics (see Basic Sciences)
Systemic pharmacology: indications, contraindications, effects and interactions of commonly used drugs including:
  • hypnotics, sedatives and intravenous anaesthetic agents
  • drugs used to treat delirium
  • simple and opioid analgesics; opioid antagonists
  • non-steroidal anti-inflammatory agents
  • neuromuscular blocking agents (depolarising and non-depolarising) and anti-cholinesterases
  • drugs acting on the autonomic nervous system (inotropes, vasodilators, vasoconstrictors, antiarrhythmics)
  • respiratory stimulants and bronchodilators
  • anti-hypertensives
  • anti-convulsants
  • anti-diabetic agents
  • diuretics
  • antibiotics (antibacterial, antifungal, antiviral, antiprotozoal, antihelmintics)
  • corticosteroids and hormone preparations
  • drugs influencing gastric secretion and motility; antiemetic agents
  • local anaesthetic agents
  • immunosuppressants
  • antihistamines
  • antidepressants
  • anticoagulants
  • plasma volume expanders

Adverse effects and interactions of drugs and their management
Recognition and management of serious adverse reactions and anaphylaxis
Local policies and procedures governing the prescription of drugs and therapies
Indications for and basic interpretation of drug concentrations in blood or plasma
Impact of drug therapy on organ-system function
Principles of blood glucose control: indications, methods, monitoring of safety and efficacy
Theoretical advantages and disadvantages of crystalloid and colloid solutions

### 4.2 Manages antimicrobial drug therapy

| Knowledge                                                                 | |
|-------------------------------------------------------------------------||
| Epidemiology and prevention of infection in the ICU                      | |
| Types of organisms - emergence of resistant strains, mode of transfer, opportunistic and nosocomial infections; difference between contamination, colonisation and infection | |
| Local patterns of bacterial resistance and antibiotic policy            | |
| Indications, complications, interactions, selection, monitoring, and efficacy of common antimicrobial drugs (antibacterial, antifungal, antiviral, antiprotozoal, anthelmintics) | |
| Indications for and basic interpretation of drug concentrations in blood or plasma | |
| Principles of prescribing initial empirical therapy and modification / refinement with further clinical and microbiological information | |
| Impact of drug therapy on organ-system function                         | |
| Risk factors for nosocomial infection and infection control measures to limit its occurrence | |
| Ventilator associated pneumonia: definition, pathogenesis and prevention | |
| Risks of inappropriate antimicrobial therapy on the patient and the environment | |
| Requirements for microbiological surveillance and clinical sampling      | |
| Effects of concomitant treatment and/or co-morbid conditions on an individual patient's response to treatment | |
| Prophylactic therapies and indications for their use                     | |
Circumstances when treatment is unnecessary
Concept of gastrointestinal microbial translocation
Safe use of therapies which modify the inflammatory response

Skills
Collaborate with microbiologists / infectious diseases clinicians to link clinical, laboratory and local (hospital / regional / national) microbiological data
Establish a management plan based on clinical and laboratory information
Prescribe appropriate antimicrobial therapy based on history, examination and preliminary investigations
Administer intravenous drugs (prepare, select route and mode of administration and document)
Set realistic goals for therapy (independently or in collaboration with other teams)
Recognise when treatment is unnecessary or futile

4.3 Administers blood and blood products safely

Knowledge
Indications for and basic interpretation of haematological tests (including coagulation and sickle tests)
Indications for and basic interpretation of blood grouping and x-matching
Indications for, contraindication, risks and alternatives to blood transfusion
Local protocols which govern the ordering, storage and verification procedures, monitoring during administration of blood products and reporting of adverse incidents
Principles of blood and blood component therapy; principles of massive transfusion, including cell salvage
Infections from contaminated blood / body fluids; strategy if contaminated (e.g. needle stick injury)
Coagulation and fibrinolytic pathways, and their associated disorders; clinical and laboratory evaluation of haemostasis
Risk of bleeding: indications, contraindications, monitoring and complications of therapeutic anticoagulants
Recognition and management of serious adverse reactions and anaphylaxis
The pathogenesis and management of anaemia, thrombocytopenia, neutropenia and pancytopenia
Thrombolytic and anti-thrombolytic agents
Principles and practise of plasma exchange (see 3.6)

Skills
Identify and correct haemostatic and coagulation disorders
Order, check, verify and administer blood products according to local protocols
Establish a management plan based on clinical and laboratory information
Recognise when treatment is unnecessary or futile

4.4 Uses fluids and vasoactive / inotropic drugs to support the circulation

Knowledge
Physiology and pathophysiology of the heart and circulation
Pathophysiological effects of altered intravascular volume
Pathophysiology and treatment of cardiac failure
Theoretical advantages and disadvantages of crystalloid and colloid solutions
Indications for, contraindication, risks and alternatives to blood transfusion
Pathophysiology, detection and management of shock states according to aetiology and in response to physiological data
Fluid therapies: components, physical properties, distribution and clearance of commonly used fluids; indications, contraindications and complications of their administration
Mechanisms of assessment of response to fluid
Indications and contraindications, limitations and complications of inotropic / vasoactive drug therapy
Interactions between inotropic agents and concomitant therapies and/or co-morbid diseases (e.g. ischaemic heart disease)
Principles of haemodynamic monitoring - invasive and non invasive methods, indications and limitations, physiological parameters and waveform interpretation
Invasive and non-invasive systems available for measuring cardiac output and derived haemodynamic variables, the principles involved and the type and site of placement of the monitoring device
Indications and limitations of transthoracic / transoesophageal echocardiography in shocked patient
Indications, limitations and complications of techniques of measurement of cardiac output (e.g. pulmonary artery catheter, oesophageal Doppler, PICCO, LiDCO) and action to prevent them
Integration of data from clinical examination and haemodynamic monitoring to characterise haemodynamic
### 4.5 Describes the use of mechanical assist devices to support the circulation

**Knowledge**

- Pathophysiology and treatment of cardiac failure
- Principles and techniques of cardiac pacing
- Pathophysiology, detection and management of shock states according to aetiology and in response to physiological data
- Prophylactic therapies and indications for their use
- Principles of haemodynamic monitoring – invasive and non-invasive methods, indications and limitations, physiological parameters and waveform interpretation
- Invasive and non-invasive systems available for measuring cardiac output and derived haemodynamic variables, the principles involved and the type and site of placement of the monitoring device
- Integration of data from clinical examination and haemodynamic monitoring to characterise haemodynamic derangements
- Principles of right and left ventricular assist devices
- Indications, contraindications, complications and basic principles of intra-aortic counter pulsation balloon pump
- Principles of extra-corporeal membrane oxygenation (ECMO)

### 4.6 Initiates, manages, and weans patients from invasive and non-invasive ventilatory support

**Knowledge**

- Causes of respiratory failure, their prevention and management
- Symptoms and signs of acute airway insufficiency and acute respiratory failure, and indications for intervention
- Distinguishing features of acute versus chronic respiratory failure and implications for management
- Principles of oxygen therapy and use of oxygen administration devices (see 5.1)
- Indications for and methods of invasive and non-invasive mechanical ventilation
- Principles of continuous positive airways pressure (CPAP) and positive end-expiratory pressure (PEEP) and CPAP and PEEP delivery systems
- Principles of emergency airway management (see 5.3)
- Modes of mechanical ventilation - indications, contraindications and expected results of each mode (CMV, IRV, PRVC, HFOV, SIMV, PS, CPAP, BiPAP, NIV)
- Operation of at least one positive pressure ventilator, one non-invasive ventilator, and a constant positive airway pressure (CPAP) device
- A systematic approach to checking ventilator, breathing circuit and monitoring devices
- Initial set-up and modification of ventilator settings according to the condition or response of the patient
- Safe prescribing of oxygen; manifestations of pulmonary oxygen toxicity

**Principles of monitoring ventilation:**

- significance of respiratory rate, tidal volume, minute volume, mean, peak, end expiratory and plateau pressure, intrinsic and extrinsic PEEP, inspired oxygen concentration, arterial blood gas and acid base status; relationship between mode of ventilation and choice of parameters monitored; airflow and airway pressure waveforms
- Principles of weaning from mechanical ventilation and factors which may inhibit weaning
- Measures of adequacy of tissue oxygenation, eg base deficit, lactate, central venous saturation
- Measurement and interpretation of pulmonary mechanics during mechanical ventilation
### Potential adverse effects and complications of respiratory support and methods to minimise these

- Ventilator associated pneumonia: definition, pathogenesis and prevention
- Causes of regurgitation and vomiting; prevention and management of pulmonary aspiration
- Concept of gastrointestinal microbial translocation
- Prophylactic therapies and indications for their use
- Causes of lung injury in ventilated patients; effects and clinical manifestations of pulmonary barotrauma
- Effect of ventilation upon cardiovascular and oxygen delivery parameters, other organ function and how these effects can be monitored (heart-lung interactions)

### Principles of physiotherapy in the ICU

- Indications and contraindications to tracheostomy (percutaneous and surgical) and minitracheostomy
- Management of and complications associated with tracheostomy tubes
- Concept of one lung ventilation and use of double lumen endotracheal tube (see 5.2)
- Principles of extra-corporeal membrane oxygenation (ECMO)

### Skills

- Establish a management plan based on clinical and laboratory information
- Select the appropriate type and mode of ventilation for an individual patient
- Identify and correct ventilator mis-assembly and disconnections
- Stabilise a patient on a constant positive airway pressure (CPAP) device
- Stabilise a patient on a non-invasive ventilator (NIV)
- Stabilise a patient on a positive pressure ventilator
- Interpret data from an arterial blood gas sample
- Confirm adequate oxygenation and control of PaCO$_2$ and pH
- Set and interpret data from ventilator alarms
- Construct, monitor and review a weaning plan
- Manages one lung ventilation via double lumen endotracheal tube (see 5.2)

### 4.7 Initiates, manages, and weans patients from renal replacement therapy

#### Basic Science

**Knowledge**

- Physiology of fluid, electrolyte, acid-base and glucose control
- Symptoms, signs and causes of renal failure including acute kidney injury / chronic / acute on chronic and indications for intervention
- Investigation of impaired renal function
- Distinguishing features of acute versus chronic renal failure and implications for management
- Principles of haemofiltration, haemodialysis, peritoneal dialysis, haemoperfusion and plasmapheresis
- Indications, complications and selection of renal replacement therapies (continuous and intermittent)
- Function and operation of continuous haemodiafiltration devices (key components and trouble-shooting)
- Placement and management of invasive devices necessary for renal replacement therapy (e.g. temporary haemodialysis catheter)
- Indications for and interpretation of fluid balance charts
- Effect of renal failure and its treatment on other organ systems
- Nephrotoxic drugs and adjustment of drug doses in renal impairment/failure
- Fluid therapies: components, physical properties, distribution and clearance of commonly used fluids; indications, contraindications and complications of their administration
- Effects of concomitant treatment and/or co-morbid conditions on an individual patient's response to treatment

**Skills**

- Establish a management plan based on clinical and laboratory information
- Modify fluid and electrolyte therapy according to clinical features and fluid balance charts
- Prevent hypokalaemia
- Identify and correct haemostatic and coagulation disorders
- Set realistic goals for therapy (independently or in collaboration with other teams)
- Supervise the provision of continuous renal replacement therapy
- Prescribe and manage anticoagulation therapy
- Set appropriate exchange parameters and fluid balances for renal replacement therapies
- Identify and avoid factors contributing to impaired renal function
Consider risk-benefit and cost-benefit of alternative drugs and therapies
Recognise when treatment is unnecessary or futile

4.8 Recognises and manages electrolyte, glucose and acid-base disturbances

### Basic Science

#### Knowledge
- Physiology of fluid, electrolyte, acid-base and glucose control
- Pathophysiological consequences, signs and symptoms of disordered fluid, electrolyte, acid-base and glucose balance
- Effect of critical illness upon homeostatic mechanisms and causes of homeostatic disturbances
- Principles of blood glucose control: indications, methods, monitoring of safety and efficacy
- Treatment strategies for abnormalities of fluid, electrolyte, acid-base and glucose balance
- Symptoms, signs and causes of renal failure (acute / chronic / acute on chronic) and indications for intervention
- Patterns of nutritional impairment; consequences of starvation and malnutrition
- Fluid therapies: components, physical properties, distribution and clearance of commonly used fluids; indications, contraindications and complications of their administration

#### Skills
- Establish a management plan based on clinical and laboratory information
- Correct electrolyte disorders (e.g. hyperkalaemia, hyponatraemia)
- Institute and manage a regimen to control blood glucose within safe limits
- Confirm adequate oxygenation and control of PaCO$_2$ and pH
- Identify and treat underlying causes for a metabolic acidosis
- Identify and avoid factors contributing to impaired renal function
- Recognise when treatment is unnecessary or futile

4.9 Co-ordinates and provides nutritional assessment and support

### Basic Science

#### Knowledge
- Principles of metabolism: nutrients – carbohydrates, fats, proteins, vitamins and minerals; metabolic pathways, lactate metabolism, energy production and enzymes; metabolic rate; hormonal control of metabolism - regulation of plasma glucose; physiological alterations in starvation, obesity and stress response.
- Gastrointestinal physiology: gastric function; secretions; gut motility, sphincters and reflex control; nausea and vomiting; digestive functions
- Pathophysiological consequences, signs and symptoms of disordered fluid, electrolyte, acid-base and glucose balance
- Methods to assess nutritional status and basal energy expenditure
- Patterns of nutritional impairment; consequences of starvation, malnutrition and refeeding
- Fluid and caloric requirements in the critically ill patient including electrolytes, vitamins, trace elements and principles of immunonutrition
- Nutritional formulations: indications, complications and their management
- Indications, limitations, methods, and complications of enteral and parenteral nutritional techniques
- Principles of nasogastric cannulation in the intubated and non-intubated patient
- Prevention of stress ulceration
- Causes of regurgitation and vomiting; prevention and management of pulmonary aspiration
- Prevention and management of constipation and diarrhoea
- Principles of blood glucose control: indications, methods, monitoring of safety and efficacy
- Alternative routes for enteral feeding: indications, contraindications and complications of post-pyloric and percutaneous feeding tube placement
- Gut motility: effects of drugs, therapy and disease
- Prokinetics: indications, contraindications, complications and selection
- Antiemetics: indications, contraindications, complications and selection
- Prevention and management of constipation and diarrhoea
- Concept of gastrointestinal microbial translocation

#### Skills
- Prescribe an appropriate standard enteral feeding regimen
- Identify surgical and other contraindications to enteral feeding
<table>
<thead>
<tr>
<th>Task</th>

Domain 5: Practical procedures

General Principles

Practical procedures underpin all forms of organ system support.

Features of competent performance may include:

- Sound decision making in when to perform a practical procedure and when to avoid it
- Prior planning and preparation of patient (including consent), staff and equipment
- Prioritisation of tasks (patients and procedures)
- Consider comfort of the patient
- Awareness of relevant applied anatomy and physiology
- Correct placement / insertion technique - alternative modes and methods
- Attention to safety: safe use of equipment, infection control, confirmation of correct placement, prevention / management of complications
- Maintenance and safe use of devices - troubleshooting
- Consider duration of placement, discontinuation and removal
- Appropriate referral / consultation
- Recognition of limitations (self and others)
- Indications for specific monitoring to ensure patient safety during an intervention / procedure
- Universal precautions and preventative infection control techniques (hand washing, gloves, protective clothing, sharps disposal etc.
- Consider the use of local anaesthetics as the norm

Domain 5: Competencies

The competences which make up the syllabus for this domain are listed below, with mapping to possible assessment methods and Good Medical Practice.

<table>

Domain 5: Syllabus

This is a detailed list of items which describe the depth and breadth of knowledge, skills and attitudes which make up the above competences. These items are not intended to be assessed individually but only as part of an assessment of the relevant competence, and have therefore not been individually mapped.

Knowledge, skills and attitudes common to all competencies

Knowledge
- Patient selection - indications, contraindications and potential complications of the procedure / intervention
- Methods and routes of insertion - associated indications and complications
- Complications of the technique, how to prevent/recognise them and initiate appropriate treatment
- Principles of aseptic technique and aseptic handling of invasive medical devices
- Indications for specific monitoring to ensure patient safety during an intervention / procedure
- Detection of potential physiological alterations during the procedure
- Appropriate use of drugs to facilitate the procedure
- Universal precautions and preventative infection control techniques (hand washing, gloves, protective clothing, sharps disposal etc.)
- Methods of sterilisation and cleaning or disposal of equipment
- Management and use of the device once in situ necessary to minimise the risks of complications
- Indications and technique for removal

Skills
- Prioritise tasks and procedures,
- Seek appropriate supervision - discuss the patient and procedure with supervisor prior to undertaking it
- Exhibit sound decision making
- Obtain informed consent/assent from the patient where appropriate
- Select appropriate equipment or device and use resources efficiently
- Prepare equipment, patient and staff prior to undertaking the procedure
- Choose an appropriate route / method of insertion and position the patient accordingly
- Use protective clothing (gloves / mask / gown / drapes) as indicated
- Identify relevant anatomical landmarks
- Use drugs as indicated to facilitate the procedure
- Perform the procedure in a manner which minimises the risks of complications
- Undertake appropriate investigation to confirm correct placement of device or exclude complications
- Recognise and manage emergencies; seek assistance appropriately
- Sterilise, clean or dispose of equipment appropriately
- Lead, delegate and supervise others appropriately according to experience and role

Attitudes
- Considers patient comfort during procedures / investigations
- Demonstrates desire to minimise patient distress
- Promotes respect for patient privacy, dignity and confidentiality
- Supports other staff in the correct use of devices
- Recognises personal limitations, seeks and accepts assistance or supervision (knows how, when and who to ask)
- Accepts personal responsibility for the prevention of cross infection and self-infection

Respiratory System

5.1 Administers oxygen using a variety of administration devices

Basic Science

Knowledge
- Symptoms, signs and causes of acute airway insufficiency and indications for intervention
- Methods of maintaining a clear airway
**Respiratory physiology:** gaseous exchange; pulmonary ventilation: volumes, flows, dead space; mechanics of ventilation: ventilation/perfusion abnormalities; control of breathing, acute and chronic ventilatory failure, effect of oxygen therapy; respiratory muscle oxygen consumption and work of breathing.

**Indications, contraindications and complications of oxygen therapy**

- Environmental hazards associated with storage and use of oxygen; strategies to promote safety
- Storage and use of oxygen, nitric oxide (NO), compressed air and helium, including use of gas cylinders
- Use of pipeline gas and suction systems
- Principles of nebulisers, pressure regulators, flowmeters, vaporizers and breathing systems
- Indications for and operation of fixed and variable performance oxygen therapy equipment, humidification and nebulising devices
- Indications for different modes of ventilation and operation of at least one positive pressure ventilator, one non-invasive ventilator, and a constant positive airway pressure (CPAP) device

**Principles of emergency airway management (see 5.3)**

**Indications for and complications of hyperbaric oxygenation**

<table>
<thead>
<tr>
<th>Skills</th>
</tr>
</thead>
<tbody>
<tr>
<td>Check pipelines; check and change portable cylinders</td>
</tr>
<tr>
<td>Select appropriate equipment or device to deliver oxygen therapy</td>
</tr>
<tr>
<td>Recognise and institute appropriate oxygen therapy in the management of medical emergencies; seek assistance as appropriate</td>
</tr>
<tr>
<td>Support ventilation using bag and mask</td>
</tr>
</tbody>
</table>

---

**5.2 Performs emergency airway management**

**Knowledge**

- Symptoms, signs and causes of acute airway insufficiency and indications for intervention
- Principles of emergency airway management (see 5.3)
- Methods of maintaining a clear airway
- Indications, selection and insertion of oral (Guedel) airways, nasopharyngeal airways and laryngeal mask airways (LMA)
- Tracheal intubation: selection of tube type, diameter and length; indications and techniques; methods to confirm correct placement of a tracheal tube
- Bronchoscopic appearance of the upper and lower airways
- Appropriate use of drugs to facilitate airway control
- Monitoring during sedation/induction of anaesthesia for endotracheal intubation
- Causes of regurgitation and vomiting; prevention and management of pulmonary aspiration
- Cricoid pressure: indications and safe provision
- Principles of endotracheal suctioning (see 5.5)
- Select appropriate tracheal tube type, size and length
- Management of difficult or failed airway (see 5.4)
- Airway management in special circumstances including but not limited to: head injury, full stomach, upper airway obstruction, shock, cervical spine injury, laryngectomy
- Appropriate use of double lumen endotracheal tube for one lung isolation / ventilation

**Skills**

- Choose a safe environment to undertake airway management (or optimise environment as circumstances allow)
- Accurately assess the airway for potential difficulties with airway management
- Optimise the patient’s position for airway management
- Maintain a clear airway using oral / nasal airways
- Support ventilation using bag and mask
- Insert and check correct placement of laryngeal mask airway
- Select appropriate tracheal tube type, size and length
- Perform intubation and verify correct placement of tube
- Manage and minimise cardiovascular and respiratory changes during and after intubation
- Demonstrate rapid sequence induction of anaesthesia / cricoid pressure
- Apply an end-tidal CO₂ detector post-intubation and interpret a capnograph trace
- Prepare the patient for and perform extubation
- Change an orotracheal tube
- Management of complications of tracheostomy including but not limited to: blockage, displacement
- Demonstrate correct placement of double lumen endotracheal tube
### 5.3 Performs difficult and failed airway management according to local protocols

**Knowledge**
- Airway management in special circumstances, (head injury, full stomach, upper airway obstruction, shock, cervical spine injury)
- Bronchoscopic appearance of the upper and lower airways
- Management of difficult intubation and failed intubation (local algorithm or protocol)
- Indications and methods of securing an emergency surgical airway
- Anatomical landmarks for cricothyrotomy/tracheostomy/mini-tracheotomy
- Indications and techniques for needle and surgical cryo/cricothyroidotomy
- Indications and contraindications to tracheostomy (percutaneous and surgical) and minitracheostomy

**Skills**
- Accurately assess the airway for potential difficulties with airway management
- Optimise the patient’s position for airway management
- Maintain a clear airway using oral / nasal airways
- Support ventilation using bag and mask
- Principles of oxygen therapy and use of oxygen administration devices (see 5.1)
- Appropriate use of drugs to facilitate airway control
- Prepare equipment for difficult or failed intubation
- Demonstrate failed intubation drill (according to local algorithm or protocol)
- Demonstrate minitracheotomy or needle crico-thyroidotomy

### 5.4 Performs endotracheal suction

**Knowledge**
- Symptoms, signs and causes of acute airway insufficiency and indications for intervention
- Methods of maintaining a clear airway
- Principles of endotracheal suctioning
- Consequences of the procedure during ventilation
- Bronchoscopic appearance of the upper and lower airways

**Skills**
- Perform endotracheal suction (via oral / nasal / tracheostomy tube)

### 5.5 Performs fibreoptic bronchoscopy and BAL in the intubated patient

**Knowledge**
- Symptoms, signs and causes of acute airway insufficiency and indications for intervention
- Bronchoscopic appearance of the upper and lower airways
- Method of bronchoscopy via an endotracheal tube
- Methods of broncho-alveolar lavage (BAL) in an intubated patient
- Detection and management of haemo/pneumothorax (simple and tension)
- Safety and maintenance of flexible fibreoptic endoscopes

**Skills**
- Undertake bronchoscopy to assess tube position including double lumen endotracheal tube
- Undertake therapeutic bronchoscopy for sputum clearance

### 5.6 Performs percutaneous tracheostomy

**Knowledge**
- Indications and contraindications to tracheostomy (percutaneous and surgical) and minitracheostomy
- Causes of regurgitation and vomiting; prevention and management of pulmonary aspiration
- Anatomical landmarks for cricothyrotomy/tracheostomy/mini-tracheotomy
- Techniques for percutaneous and surgical tracheotomy

**Skills**
- Identify patients requiring tracheostomy; discuss indications and contraindications for percutaneous tracheostomy
- Manage and minimise cardiovascular and respiratory changes during and after intubation
- Select appropriate tracheal tube type, size and length
Perform percutaneous tracheostomy
Manage and minimise cardiovascular and respiratory changes during and after intubation under direct supervision
Change a tracheostomy tube electively
Manage anaesthesia and control the airway during planned tracheostomy tube insertion in the intensive care unit (ICU)

### 5.11 Performs defibrillation and cardioversion

**Knowledge**
- Principles of ECG monitoring (heart rate, rhythm, conduction, ST segment change and QT interval) – indications, limitations and techniques. Advantages and disadvantages of different lead configurations
- Basic and complex cardiac arrhythmias - recognition and management (pharmacological and electrical)
- Treatment (algorithm) of patients in ventricular fibrillation (VF) and pulseless ventricular tachycardia (VT)
- Defibrillation: principles of monophasic and biphasic defibrillators; mechanism, indications, complications, modes and methods (manual and automated external defibrillators (AED))
- **Electrical safety:** conditions which predispose to the occurrence of macro-shock / micro-shock; physical dangers of electrical currents; relevant standards regarding safe use of electricity in patient care; basic methods to reduce electrical hazards.
- Principles of emergency airway management (see 5.3)

**Skills**
- Obtain and interpret data from ECG (3- and 12-lead)
- Use manual external defibrillators
- Use automated external defibrillators (AED)

### 5.12 Performs transthoracic cardiac pacing, describes transvenous
decibes transvenous

**Knowledge**
- Principles and techniques of cardiac pacing
- Principles of ECG monitoring (heart rate, rhythm, conduction, ST segment change and QT interval) – indications, limitations and techniques. Advantages and disadvantages of different lead configurations
- Basic and complex cardiac arrhythmias - recognition and management (pharmacological and electrical)
- Principles, routes and techniques of peripheral and central venous cannulation
- Surface anatomy: structures in the antecubital fossa; large veins and anterior triangle of the neck; large veins of the leg and femoral triangle
- Methods for securing vascular access rapidly
- Detection and acute management of cardiac tamponade
- Principles of emergency airway management (see 5.3)
- Detection and management of haemo/pneumothorax (simple and tension)
- Insertion and management of chest drains and air exclusion devices

**Skills**
- Describe insertion of a temporary pacing wire
- Demonstrate the use of transthoracic pacing
- Demonstrate emergency relief of tension pneumothorax
- Principles of defibrillation and cardioversion (see 5.11)
- Describe emergency percutaneous pericardial aspiration
- Establish and review pacing box settings

### 5.13 Describes how to perform pericardiocentesis

**Knowledge**
- Detection and acute management of cardiac tamponade
- Anatomical landmarks and technique for percutaneous pericardial aspiration
- Principles of ECG monitoring (heart rate, rhythm, conduction, ST segment change and QT interval) – indications, limitations and techniques. Advantages and disadvantages of different lead configurations
- Treatment (algorithm) of patients in ventricular fibrillation (VF) and pulseless ventricular tachycardia (VT)
- Principles of emergency airway management (see 5.3)
- Principles of defibrillation and cardioversion (see 5.11)

### 5.14 Demonstrates a method for measuring cardiac output and derived haemodynamic variables

**Knowledge**
- Principles of haemodynamic monitoring - invasive and non invasive methods, indications and limitations, physiological
### Central Nervous System

#### 5.15 Performs lumbar puncture (intradural / ‘spinal’) under supervision

**Knowledge**
- Indications for and contraindications of lumbar puncture and CSF sampling; laboratory analysis of CSF samples

**Skills**
- Performs lumbar puncture
- Insert a lumbar drain for CSF drainage

#### 5.16 Manages the administration of analgesia via an epidural catheter

**Basic Science**

**Knowledge**
- Indications, contraindications, methods and complications of epidural catheterisation
- Pharmacokinetics, pharmacodynamics, indications and complications of opiates and local anaesthetic agents
- Indications, contraindications and complications of epidural infusion / injection; principles of safe epidural drug administration
- Physiological effects of pain and anxiety
- Recognition and methods of assessment of pain
- Contraindications, methods and complications of epidural catheter removal

**Skills**
- Select an appropriate epidural infusion regimen and titrate safely
- Select and determine adequacy and route of administration of analgesia
- Manage an established epidural infusion
- Administer bolus analgesia via an epidural catheter
- Minimise complications associated with opioid and non-opioid analgesics

### Gastrointestinal System

#### 5.17 Performs abdominal paracentesis

**Knowledge**
- Anatomy of the abdominal wall; landmarks for abdominal paracentesis and abdominal drainage catheters
- Indications, contraindications, complications and technique of abdominal paracentesis

**Skills**
- Insert an abdominal drain

#### 5.18 Describes Sengstaken tube (or equivalent) placement

**Knowledge**
- Principles and techniques for insertion of gastro-oesophageal balloon tamponade tube (e.g. Sengstaken-Blakemore)
### 5.19 Performs nasogastric tube placement

<table>
<thead>
<tr>
<th>Knowledge</th>

</tbody>
</table>
Domain 6: Perioperative care

General Principles

Acutely ill patients may present with medical, or surgical problems, or both. The complications of critical illness do not respect speciality boundaries. Perioperative care requires multidisciplinary collaboration, and often provides opportunities for preventative intensive care.

Features of competent performance may include:

- Attention to physiological optimisation and monitoring
- Consider the surgical and anaesthetic procedure in relation to plan of management (including critical decision making, application of relevant protocols / guidelines / care bundles)
- Awareness of main acute complications and their prevention / management
- Attention to patient comfort
- Effective team-working: collaboration, communication and continuity of care
- Professional relationship with patient and relatives: communication; interpersonal skills.
- Appropriate referral / consultation
- Recognition of limitations (self and others)
- Attention to patient safety

Domain 6: Competencies

The competences which make up the syllabus for this domain are listed below, with mapping to possible assessment methods and Good Medical Practice.

<table>
<thead>
<tr>

</table>

Domain 6: Syllabus

This is a detailed list of items which describe the depth and breadth of knowledge, skills and attitudes which make up the above competences. These items are not intended to be assessed individually but only as part of an assessment of the relevant competence, and have therefore not been individually mapped.

Knowledge, skills and attitudes common to all sections

Skills
Lead, delegate and supervise others appropriately according to experience and role

Attitudes
Demonstrates desire to minimise patient distress
Attention to and control of pain
Consults, communicates and collaborates effectively with anaesthetist, surgeon, nursing staff, other professionals, patients and relatives where appropriate
Recognises personal limitations, seeks and accepts assistance or supervision (knows how, when and who to ask)
6.1 Manages the pre- and post-operative care of the high risk surgical patient

### Knowledge

- Factors determining perioperative risk
- Importance of preoperative health status on postoperative outcomes including cardiopulmonary exercise testing
- Indications for, and interpretation of pre-operative investigations
- Dangers of emergency anaesthesia and surgery
- Effect of gastric contents and volume depletion on perioperative risk
- Anaesthetic risk factors complicating recovery: suxamethonium apnoea, anaphylaxis, malignant hyperpyrexia, difficult airway
- Criteria for admission to, and discharge from ICU - factors influencing intensity and site of care (ward, high dependency unit (HDU), intensive care unit (ICU))
- Perioperative implications of current drug therapy
- Consent and assent in the competent and non-competent patient
- Implications for postoperative care of common acute and chronic medical conditions (see 3.1 and 3.2)
- Implications of type of anaesthesia (general/regional/local) for perioperative care
- Implications of type / site of surgery for postoperative management and potential complications within the first 24 hours of surgery
- Indications and choice of agent for antibiotic prophylaxis
- Indications for and methods of perioperative anti-thrombotic treatment
- Recognition, assessment and management of acute pain.

#### Assessment and management of commonly encountered perioperative conditions and complications including:

**Respiratory:**
- Interpretation of symptoms and signs of respiratory insufficiency in the surgical patient; the unprotected airway; upper and lower airway obstruction including laryngeal trauma and oedema; pneumonia, collapse or consolidation, pulmonary infiltrates including acute lung injury (ALI) and the acute respiratory distress syndrome (ARDS) and their causative factors; TRALI; pulmonary oedema; pleural effusion, haemo/pneumothorax (simple and tension); use of chest drains; factors affecting patients following thoracotomy, lung resection, oesophagectomy and oro facial surgery

**Cardiovascular:**
- Interpretation of symptoms and signs of cardiovascular insufficiency in the surgical patient; recognition of bleeding; management of hypo/hypertension; pulmonary embolus, operative risk factors in patients with ischaemic heart disease, significant valvular disease, cardiac tamponade; surgery for acquired and congenital cardiac disease; management of patients following cardiac surgery (coronary grafting, valve replacement) and aortic surgery (arch, thoracic, abdominal); heart and heart-lung transplantation

**Renal:**
- Causes of perioperative oliguria and anuria; prevention and management of acute renal failure, rhabdomyolysis; consequences of nephrectomy, ileal conduits; management post-rerenal transplantation

**Haematology and oncology:**
- Management of severe acute haemorrhage and blood transfusion; correction of coagulation disorders and haemoglobinopathies, care of the immunosuppressed or immunoincompetent patient, complications of chemotherapy and radiotherapy

**Metabolic and hormonal:**
- Perioperative management of patients with diabetes; blood glucose control; perioperative management of electrolyte disorders, hypo- and hyperadrenalism, surgery to thyroid, adrenal and pituitary glands

**Gastrointestinal:**
- Interpretation of abdominal pain and distension; peptic ulceration and upper GI haemorrhage; diarrhoea, vomiting and ileus; peritonitis; intestinal ischaemia; perforation; abdominal hypertension; pancreatitis; jaundice; cholecystitis;
- Management of the pre- and post-liver transplant patient; perioperative nutrition; post-operative nausea and vomiting

**Sepsis and Infection:**
- Fever and hypothermia; postoperative hypoperfusion and impaired oxygen delivery; wound infection; opportunistic and nosocomial infection; perioperative infection risk and prophylactic antibiotics; necrotising fasciitis; peritonitis; Clostridium difficile

**Plastic Surgery:**
- Management of vascular skin grafts

**Neurological:**
- Causes of post-operative confusion and delirium, stroke (CVA), coma and raised intracranial pressure; determinants of cerebral perfusion and oxygen delivery; prevention of secondary brain injury; perioperative management of patients with neuropathies and myo pathies; intracranial pressure monitoring; extra-dural and sub-dural haematoma; intracerebral haemorrhage; spinal cord injury and ischaemia; brachial plexus injury; complications of neuromuscular blockade
### Musculo-skeletal

- principles and management of external fixators and casts; perioperative positioning; pressure area care; compartment syndromes and pressure monitoring; patients; on muscle relaxants; principles of salvage surgery

### Methods of optimising high risk surgical patients: ERAS?

#### Skills

- Consider the impact of long-term and chronic treatment on acute surgical care
- Communicate the risk of surgery to patients and family
- Accurately assess the airway for potential difficulties with airway management
- Ensure the necessary resources are available for safe post-operative care
- Identify pre-operative health status and intercurrent disease, medications, allergies and their interaction with the nature of anaesthetic and surgery
- Obtain relevant information from the patient, relatives and other secondary sources
- Interpret pre-operative investigations, intra-operative findings and events/complications, and respond to them appropriately
- Assess conscious level and conduct a careful systems review
- Optimise high-risk surgical patients before surgery: consider site of care and management plan
- Select and determine adequacy and route of administration of analgesia
- Document, monitor and manage fluid balance, circulating volume, drains, systemic oxygen supply
- Establish a plan for postoperative management
- Identify life-threatening cardiorespiratory complications; manage hypovolaemia and impaired oxygen delivery
- Manage post-operative hypo and hypertension
- Differentiate and manage tension pneumothorax, cardiac tamponade and pulmonary embolus
- Manage post-operative stridor
- Recognise and manage perioperative emergencies and seek assistance appropriately

### 6.2 Manages the care of the patient following cardiac surgery under supervision

#### Knowledge

- Factors determining perioperative risk:
  - Importance of preoperative health status on postoperative outcomes
  - Indications for, and interpretation of pre-operative investigations
  - Dangers of emergency anaesthesia and surgery
  - Perioperative implications of current drug therapy
  - Implications for postoperative care of common acute and chronic medical conditions (see 3.1 and 3.2)
  - Implications of type of anaesthesia (general/regional/local) for perioperative care
  - Implications of type / site of surgery for postoperative management and potential complications within the first 24 hours of surgery
  - Recognition, assessment and management of acute pain
  - Indications for and methods of perioperative anti-thrombotic treatment
  - Criteria for admission to, and discharge from ICU - factors influencing intensity and site of care (ward, high dependency unit (HDU), intensive care unit (ICU))

- Assessment and management of commonly encountered perioperative conditions and complications including:
  - **Respiratory:**
    - Interpretation of symptoms and signs of respiratory insufficiency in the surgical patient; the unprotected airway; upper and lower airway obstruction including laryngeal trauma and oedema; pneumonia, collapse or consolidation, pulmonary infiltrates including acute lung injury (ALI) and the acute respiratory distress syndrome (ARDS) and their causative factors; TRALI; pulmonary oedema; pleural effusion, haemo/pneumothorax (simple and tension); use of chest drains; factors affecting patients following thoracotomy, lung resection, oesophagectomy and oro facial surgery
    - Management of bronchopleural fistula; post insertion management of tracheal and bronchial stents
  - **Cardiovascular:**
    - Interpretation of symptoms and signs of cardiovascular insufficiency in the surgical patient; recognition of bleeding; management of hypo/hypertension; pulmonary embolus; cardiac tamponade; surgery for congenital and acquired cardiac disease; management of patients following cardiac surgery (coronary grafting, valve replacement) and aortic surgery (arch, thoracic, abdominal); heart; principles of cardiac pacing
    - Management of pulmonary hypertension
  - **Renal:** Causes of perioperative oliguria and anuria; prevention and management of acute renal failure
  - **Neurological:** stroke (CVA); causes of post-operative confusion.
  - **Gastrointestinal:** post-operative alterations in gut motility; perioperative nutrition; post-operative nausea and vomiting
Haematology and oncology:
Management of severe acute haemorrhage and blood transfusion, principles of cell salvage; correction of coagulation disorders and haemoglobinopathies, care of the immunosuppressed or immunoincompetent patient, complications of chemotherapy and radiotherapy

Interprets thromboelastography in post cardiac surgical patients

Metabolic & Hormonal: Blood glucose control; perioperative management of electrolyte disorders

Sepsis and Infection: fever and hypothermia; postoperative hypoperfusion and impaired oxygen delivery; wound infection; opportunistic and nosocomial infection; perioperative infection risk and prophylactic antibiotics; intestinal ischaemia; antibiotic selection and prescribing

Management of cyanosis, hypo- and hypertension, hypothermia and shivering

Surgical interventions in patients with cardiac disease, perioperative management of the cardiovascular surgery patient and potential complications occurring within 24 hours of cardiac surgery

Skills

Consider the impact of long-term and chronic treatment on acute surgical care

Identify pre-operative health status and intercurrent disease, medications, allergies and their interaction with the nature of anaesthetic and surgery

Obtain relevant information from the patient, relatives and other secondary sources

Assess conscious level and conduct a careful systems review

Select and determine adequacy and route of administration of analgesia

Document, monitor and manage fluid balance, circulating volume, drains, systemic oxygen supply

Establish a plan for postoperative management

Identify life-threatening cardiorespiratory complications; manage hypovolaemia and impaired oxygen delivery

Differentiate and manage tension pneumothorax, cardiac tamponade and pulmonary embolus

Recognise and manage perioperative emergencies and seek assistance appropriately

Seek appropriate support and supervision in order to provide optimal patient care

Interpret pre-operative investigations, intra-operative findings and events/complications, and respond to them appropriately

Demonstrates management of intra-aortic balloon pump in surgical and non-surgical cardiac patients

6.3 Manages the care of the patient following craniotomy under supervision

Knowledge

Factors determining perioperative risk

Importance of preoperative health status on postoperative outcomes

Indications for, and interpretation of pre-operative investigations

Perioperative implications of current drug therapy

Implications for postoperative care of common acute and chronic medical conditions (see 3.1 and 3.2)

Implications of type of anaesthesia (general/regional/local) for perioperative care

Recognition, assessment and management of acute pain

Indications for and methods of perioperative anti-thrombotic treatment

Criteria for admission to, and discharge from ICU – factors influencing intensity and site of care (ward, high dependency unit (HDU), intensive care unit (ICU))

Major neurosurgical procedures, peri-operative management of the patient undergoing major neurosurgery, and potential complications occurring within 24 hours of surgery

Assessment and management of commonly encountered perioperative conditions and complications including:

Respiratory: Interpretation of symptoms and signs of respiratory insufficiency in the surgical patient

Cardiovascular: Interpretation of symptoms and signs of cardiovascular insufficiency in the surgical patient; management of hypo/hypertension

Renal: Causes of perioperative oliguria and anuria; prevention and management of acute renal failure

Neurological: causes of post-operative confusion, stroke (CVA), coma and raised intracranial pressure; determinants of cerebral perfusion and oxygenation; prevention of secondary brain injury; intracranial pressure monitoring; therapeutic correction of raised intracranial pressure; intracerebral haemorrhage, contusion and oedema

Gastrointestinal: post-operative alterations in gut motility; perioperative nutrition; post-operative nausea & vomiting

Metabolic & Hormonal: blood glucose control; perioperative management of electrolyte disorders

Sepsis and Infection: fever and hypothermia; postoperative hypoperfusion and impaired oxygen delivery; wound infection; opportunistic and nosocomial infection; perioperative infection risk and prophylactic antibiotics; intestinal
### Skills

- Consider the impact of long-term and chronic treatment on acute surgical care
- Identify pre-operative health status and intercurrent disease, medications, allergies and their interaction with the nature of anaesthetic and surgery
- Obtain relevant information from the patient, relatives and other secondary sources
- Assess conscious level and conduct a careful systems review
- Select and determine adequacy and route of administration of analgesia
- Document, monitor and manage fluid balance, circulating volume, drains, systemic oxygen supply
- Establish a plan for postoperative management
- Recognise and manage perioperative emergencies and seek assistance appropriately
- Interpret pre-operative investigations, intra-operative findings and events/complications, and respond to them appropriately
- Monitor and manipulate cerebral perfusion pressure (CPP)

### 6.4 Manages the care of the patient following solid organ transplant under supervision

#### Knowledge

- Factors determining perioperative risk
- Importance of preoperative health status on postoperative outcomes
- Indications for, and interpretation of pre-operative investigations
- Perioperative implications of current drug therapy
- Implications for postoperative care of common acute and chronic medical conditions (see 3.1 and 3.2)
- Implications of type of anaesthesia (general/regional/local) for perioperative care
- Solid organ-specific transplantation (heart-lung, liver, renal): peri-operative considerations, pharmacological management, post-operative care and potential complications
- Immunosuppression and rejection
- Implications of type / site of surgery for postoperative management and potential complications within the first 24 hours of surgery
- Criteria for admission to, and discharge from ICU - factors influencing intensity and site of care (ward, high dependency unit (HDU), intensive care unit (ICU))
- Indications for and methods of perioperative anti-thrombotic treatment
- Recognition, assessment and management of acute pain
- Assessment and management of commonly encountered perioperative conditions and complications including:
  - **Respiratory**: Interpretation of symptoms and signs of respiratory insufficiency in the surgical patient; pneumonia, collapse or consolidation, pulmonary infiltrates including acute lung injury (ALI) and the acute respiratory distress syndrome (ARDS) and their causative factors; pulmonary oedema; pleural effusion, haemopneumothorax (simple and tension); use of chest drains; factors affecting patients following heart-lung transplantation.
  - **Cardiovascular**: Recognition of bleeding; interpretation of symptoms and signs of cardiovascular insufficiency in the surgical patient; management of hypo/hypertension; pulmonary embolus; management of patients following heart and heart-lung transplantation
  - **Renal**: Causes of perioperative oliguria and anuria; prevention and management of acute renal failure; management post-reoral transplantation
  - **Neurological**: stroke (CVA); causes of post-operative confusion.
  - **Gastrointestinal**: post-operative alterations in gut motility; perioperative nutrition; post-operative nausea and vomiting; management of the post-liver transplant patient.
- **Haematology and oncology**: Management of severe acute haemorrhage and blood transfusion, principles of cell salvage; correction of coagulation disorders and haemoglobinopathies. Care of the immunosuppressed or immunoincompetent patient complications of chemotherapy
- **Metabolic & Hormonal**: blood glucose control; perioperative management of electrolyte disorders
- **Sepsis and Infection**: fever and hypothermia; postoperative hypoperfusion and impaired oxygen delivery; wound infection; opportunistic and nosocomial infection; perioperative infection risk and prophylactic antibiotics; intestinal ischaemia; antibiotic selection and prescribing

#### Skills

- Consider the impact of long-term and chronic treatment on acute surgical care
Interpret pre-operative investigations, intra-operative findings and events/complications, and respond to them appropriately

Identify pre-operative health status and intercurrent disease, medications, allergies and their interaction with the nature of anaesthetic and surgery

Obtain relevant information from the patient, relatives and other secondary sources

Assess conscious level and conduct a careful systems review

Select and determine adequacy and route of administration of analgesia

Document, monitor and manage fluid balance, circulating volume, drains

Establish a plan for postoperative management

Review and monitor perioperative immunosuppressive therapy

Identify life-threatening cardiorespiratory complications; manage hypovolaemia and impaired oxygen delivery

Recognise and manage perioperative emergencies and seek assistance appropriately

Seek appropriate support and supervision in order to provide optimal patient care

### 6.5 Manages the pre- and post-operative care of the trauma patient under supervision

#### Knowledge

- Factors determining perioperative risk
- Importance of preoperative health status on postoperative outcomes
- Indications for, and interpretation of pre-operative investigations
- Dangers of emergency anaesthesia and surgery
- Perioperative implications of current drug therapy
- Consent and assent in the competent and non-competent patient
- Implications for postoperative care of common acute and chronic medical conditions *(see 3.1 and 3.2)*
- Indications for and methods of perioperative anti-thrombotic treatment
- Recognition, assessment and management of acute pain
- Implications of type of anaesthesia (general/regional/local) for perioperative care
- Implications of type / site of surgery for postoperative management and potential complications within the first 24 hours of surgery
- Assessment and management of commonly encountered perioperative conditions & complications including:
  - **Respiratory:** Interpretation of symptoms and signs of respiratory insufficiency in the trauma patient; pneumonia, collapse or consolidation, pulmonary infiltrates including acute lung injury (ALI) and acute respiratory distress syndrome (ARDS) and their causative factors; pulmonary contusion; pulmonary oedema; pleural effusion, haemo/pneumothorax (management of simple and tension); use of chest drains.
  - **Cardiovascular:** Interpretation of symptoms and signs of cardiovascular insufficiency in the trauma patient including cardiac contusion and tamponade; management of Renal: Causes of perioperative oliguria and anuria; rhabdomyelosis; prevention and management of acute renal failure
  - **Neurological:** causes of post-operative confusion, stroke (CVA), coma and raised intracranial pressure; determinants of cerebral perfusion and oxygenation; prevention of secondary brain injury; intracranial pressure monitoring; therapeutic correction of raised intracranial pressure; intracerebral haemorrhage, contusion and oedema
  - **Gastrointestinal:** Interpretation of abdominal pain and distension; intestinal ischaemia; abdominal hypertension; risk factors, monitoring and management of abdominal compartment syndrome; perioperative nutrition; post-operative nausea and vomiting
  - **Haematology:** management of severe acute haemorrhage and blood transfusion, principles of cell salvage; correction of coagulation disorders and haemoglobinopathies.
  - **Metabolic & Hormonal:** Blood glucose control; perioperative management of electrolyte disorders
  - **Sepsis and Infection:** fever and hypothermia; postoperative hypoperfusion and impaired oxygen delivery; wound infection; opportunistic and nosocomial infection; perioperative infection risk and prophylactic antibiotics; necrotising fasciitis; peritonitis; intestinal ischaemia; antibiotic selection and prescribing
  - **Criteria for admission to, and discharge from ICU - factors influencing intensity and site of care (ward, high dependency unit (HDU), intensive care unit (ICU))**
  - **Musculo-skeletal:** principles and management of external fixators and casts; perioperative positioning; pressure area care; compartment syndromes; paralysed patients; principles of salvage surgery; management of vascular skin grafts

#### Skills

- Consider the impact of long-term and chronic treatment on acute surgical care
- Identify pre-operative health status and intercurrent disease, medications, allergies and their interaction with the nature of anaesthetic and surgery
| Obtain relevant information from the patient, relatives and other secondary sources |
| Interpret pre-operative investigations, intra-operative findings and events/complications, and respond to them appropriately |
| Conduct a secondary survey following ATLS (or equivalent) principles |
| Communicate the risk of surgery to patients and family |
| Assess conscious level and conduct a careful systems review |
| Select & determine adequacy and route of administration of analgesia |
| Document, monitor and manage fluid balance, circulating volume, drains, systemic oxygen supply |
| Identify life-threatening cardiorespiratory complications; manage hypovolaemia and impaired oxygen delivery |
| Describe the risk period for use of depolarizing neuromuscular blocking agents in patients undergoing repeated surgical procedures |
| Seek appropriate support and supervision in order to provide optimal patient care |
| Establish a plan for postoperative management including plans for further surgery |
Domain 7: Comfort and recovery

General Principles

The compassionate care of patients and families is a fundamental duty of any clinician, which is given particular emphasis by the special circumstances of critical illness. The process of rehabilitation starts in intensive care and is continued for many months – sometimes years – following discharge from hospital. This journey to recovery requires attention to both the physical and the psychological consequences of critical illness.

Features of competent performance may include:

- Awareness of impact of ICU environment on patient and relatives
- Effective communication and interpersonal skills - patients, family and staff
- Attention to patient comfort (physical and psychosocial)
- Awareness of relevant applied physiology and pharmacology
- Consider indications, contraindications and complications of intervention - alternative modes, methods and techniques
- Clearly defined therapeutic strategy / care plan for immediate and longer term care
- Evaluation and modification of therapy according to clinical response
- Safe use of equipment / device / drugs
- Effective team-working: promote collaboration, communication and continuity of care
- Appropriate referral / consultation
- Recognition of limitations (self and others)
- Attention to patient safety

Domain 7: Competencies

The competences which make up the syllabus for this domain are listed below, with mapping to possible assessment methods and Good Medical Practice.

<table>
<thead>
<tr>
<th>Competence</th>
<th>Description</th>

<td>M, T, E</td>
<td>1, 3</td>
</tr>
</tbody>
</table>

Domain 7: Syllabus

This is a detailed list of items which describe the depth and breadth of knowledge, skills and attitudes which make up the above competences. These items are not intended to be assessed individually but only as part of an assessment of the relevant competence, and have therefore not been individually mapped.

Knowledge, skills and attitudes common to all competencies

<table>
<thead>
<tr>
<th>Skills</th>
</tr>
</thead>
<tbody>
<tr>
<td>Lead, delegate and supervise others appropriately according to experience and role</td>
</tr>
<tr>
<td>Communicate effectively with relatives who may be, in denial, anxious, angry, confused, or litigious</td>
</tr>
</tbody>
</table>
Attitudes

Desire to minimise patient distress

Regards each patient as an individual

Establishes trusting relationships with and demonstrates compassionate care of patients and their relatives

Willingness to communicate with and support families / significant others

Respects the religious beliefs of the patient and offers to liaise with a religious representative if this is the wish of the patient or family

Acknowledges the consequences of the language used to impart information

Fosters effective communication and relationships with medical and nursing staff in other wards / departments

Recognises personal limitations, seeks and accepts assistance or supervision (knows how, when and who to ask)

Recognises that intensive care is a continuum within the 'patient journey'

Promotes appropriate and timely discharge from ICU

Appreciates that physical and psychological consequences of critical illness can have a significant and long lasting effect for both patients and their relatives

Early planning for rehabilitation

Seeks to modify the stresses which the intensive care environment places upon patients, their relatives and members of staff

7.1 Identifies and attempts to minimise the physical and psychosocial consequences of critical illness for patients and families

Knowledge

Common symptomatology following critical illness

Causes and methods of minimising distress in patients

The role of patient’s relatives and their contribution to care

Physiological effects of pain and anxiety

Stress responses

Recognition and methods of assessment of pain

Principles of acute pain management

Pharmacokinetics, pharmacodynamics, indications and complications of commonly used analgesic, hypnotic, and neuromuscular blocking drugs in patients with normal and abnormal organ system function

Sleep deprivation and its consequences

Causes and management of acute confusional states

Sensory deprivation / sensory overload

Environmental and drug-related psychopathology associated with critical illness (e.g. anxiety, sleep disorders, hallucinations, drug withdrawal)

Impact of staff-patient contact and environmental factors on patient stress

Post-traumatic stress disorders

Methods of communicating with patients who are unable to speak

Relevance and methods to care for skin, mouth, eyes and bowels, and to maintain mobility and muscle strength in critically ill patients

Fluid and caloric requirements in the critically ill patient including electrolytes, vitamins, trace elements and principles of immunonutrition

Methods to assess nutritional status and basal energy expenditure

Causes, prevention and management of critical illness polyneuropathy, motor neuropathy, and myopathy

Consequences of immobilisation and mobilisation techniques (including disuse atrophy, foot-drop, ectopic calcification)

Prevention and management of pressure sores

Principles of rehabilitation: physical and psychological

Resources available to patients and relatives for education and support (e.g. societies, local groups, publications, referral to allied health care professionals)

Common risk factors for post-ICU mortality or re-admission and their minimisation

Methods to minimise potential psychological trauma to the patient and their family of transfer from the ICU (especially with regard to long term ICU patients)

The implications for relatives of adopting a role as a carer at home

Impact of chronic illness post-ICU on socialisation and employment

Skills

Identify complications associated with critical illness
Work with colleagues and relatives to minimise patient distress
Anticipate the development of pain and/or anxiety and adopt strategies for its prevention or minimisation
Use analgesic, hypnotic and neuromuscular blocking drugs appropriately and safely
Propose and implement a plan to provide adequate sleep and rest in ICU patients
Participate in the education of patients/families
Appropriate and timely referral to specialists / allied health professionals
Take decisions to admit, discharge or transfer patients
Follow-up patients after discharge to the ward
Participate in follow-up clinics / services where available

7.2 Manages the assessment, prevention and treatment of pain and delirium

Knowledge
- Physiological effects of pain and anxiety
- Stress responses
- Causes and methods of minimising distress in patients
- Recognition and methods of assessment of pain
- Principles of acute pain management
- Pharmacokinetics, pharmacodynamics, indications and complications of commonly used analgesic, hypnotic, and neuromuscular blocking drugs in patients with normal and abnormal organ system function
- Indications, contra-indications, methods and complications of regional analgesia in critical illness
- Patient-controlled analgesia
- Environmental and drug-related psychopathology associated with critical illness (e.g. anxiety, sleep disorders, hallucinations, drug withdrawal)
- Causes and management of acute confusional states
- Relevance and methods to care for skin, mouth, eyes and bowels, and to maintain mobility and muscle strength in critically ill patients
- Sleep deprivation and its consequences
- Potential long term consequences of acute delirium

Skills
- Anticipate the development of pain and/or anxiety and adopt strategies for its prevention or minimisation
- Interpret data from scoring or scaling systems to assess pain and sedation
- Select and determine adequacy and route of administration of analgesia
- Use analgesic, hypnotic and neuromuscular blocking drugs appropriately and safely
- Minimise complications associated with opioid and non-opioid analgesics
- Propose and implement a plan to provide adequate sleep and rest in ICU patients
- Work with colleagues and relatives to minimise patient distress

7.3 Manages sedation and neuromuscular blockade

Knowledge
- Physiological effects of pain and anxiety
- Causes and methods of minimising distress in patients
- Stress responses
- Causes and management of acute confusional states
- Recognition and assessment of anxiety
- Environmental and drug-related psychopathology associated with critical illness (e.g. anxiety, sleep disorders, hallucinations, drug withdrawal)
- Sensory deprivation / sensory overload
- Pharmacokinetics, pharmacodynamics, indications and complications of commonly used analgesic, hypnotic, and neuromuscular blocking drugs in patients with normal and abnormal organ system function
- Methods of measuring depth of sedation; effects of over-sedation and strategies to avoid this; sedation holds
- Consequences of immobilisation and mobilisation techniques (including disuse atrophy, foot-drop, ectopic calcification)
- Causes, prevention and management of critical illness polyneuropathy, motor neuropathy, and myopathy
- Prevention and management of pressure sores
- Sleep deprivation and its consequences
- Post-traumatic stress disorders
Skills
Anticipate the development of pain and/or anxiety and adopt strategies for its prevention or minimisation
Use analgesic, hypnotic and neuromuscular blocking drugs appropriately and safely
Interpret data from scoring or scaling systems to assess pain and sedation
Obtain and interpret data from a nerve stimulator to monitor the degree of neuromuscular blockade
Identify complications associated with critical illness
Propose and implement a plan to provide adequate sleep and rest in ICU patients
Work with colleagues and relatives to minimise patient distress

7.4 Communicates the continuing care requirements, including rehabilitation, of patients at ICU discharge to health care professionals, patients and relatives

Knowledge
Criteria for admission to, and discharge from ICU - factors influencing intensity and site of care (ward, high dependency unit (HDU), intensive care unit (ICU))
Common symptomatology following critical illness
Common risk factors for post-ICU mortality or re-admission and their minimisation
Post-traumatic stress disorders
Environmental and drug-related psychopathology associated with critical illness (e.g. anxiety, sleep disorders, hallucinations, drug withdrawal)
Consequences of immobilisation and mobilisation techniques (including disuse atrophy, foot-drop, ectopic calcification)
Causes, prevention and management of critical illness polyneuropathy, motor neuropathy, and myopathy
Fluid and caloric requirements in the critically ill patient including electrolytes, vitamins, trace elements and principles of immunonutrition
Principles of rehabilitation: physical and psychological
Methods of communicating with patients who are unable to speak
Causes and methods of minimising distress in patients
Resources available to patients and relatives for education and support (e.g. societies, local groups, publications, referral to allied health care professionals)
Supportive services integral to the long term rehabilitation of critically ill patients (physiotherapy, occupational therapy, orthotics, social services).
The implications for relatives of adopting a role as a carer at home
Management of tracheostomy: care and avoidance of complications outside the ICU
Persistent vegetative state; locked in syndromes
Methods to assess nutritional status and basal energy expenditure
Impact of chronic illness post-ICU on socialisation and employment
Methods for assessing or measuring quality of life
Methods to minimise potential psychological trauma to the patient and their family of transfer from the ICU (especially with regard to long term ICU patients)
Long-term ventilation outside the ICU environment (e.g. home ventilation)
Define the role of rehabilitation services and the multi-disciplinary team to facilitate long-term care
Understand the function of post ICU follow-up clinics, how they can be organised and what the risks/benefits are for these services
Outline the concept of patient self-care
Know, understand and be able to compare medical and social models of disability
Understand the relationship between local health, educational and social service provision including the voluntary sector

Skills
Anticipate the development of pain and/or anxiety and adopt strategies for its prevention or minimisation
Work with colleagues and relatives to minimise patient distress
Appropriate and timely referral to specialists / allied health professionals
Ensure effective information exchange before patient discharge from ICU
Liaise with medical and nursing staff in other departments to ensure optimal communication and continuing care after ICU discharge
Communicate effectively with relatives who may be anxious, angry, confused, or litigious
Participate in the education of patients/families
Follow-up patients after discharge to the ward
Develop a self-management plan including investigation, treatments and requests/instructions to other healthcare professionals
professionals, in partnership with the patient
Support patients, parents and carers where relevant to comply with management plans
Promote and encourage involvement of patients in appropriate support networks, both to receive support and to give support to others
Recognise the impact of long term conditions on the patient, family and friends
Put patients in touch with the relevant agency including the voluntary sector from where they can procure the items as appropriate
Provide the relevant tools and devices when possible
Show willingness to facilitate access to the appropriate training and skills in order to develop the patient’s confidence and competence to self care
Manage follow-up effectively
Provide brief advice on use of alcohol and other drugs
Provide management and/or referral where appropriate

**Attitudes**

Support patient self-management
Recognise and respect the role of family, friends and carers in the management of the patient with a long term condition
Recommend appropriate secondary prevention treatments and lifestyle changes on discharge

Domain 8: End of life care

General Principles

Death is inevitably a managed, not a ‘natural’ process in intensive care. The manner in which it is conducted may affect the survivors – family and staff – for the rest of their lives. Treatment limitation or withdrawal does not mean denial of care; patients should not suffer, and, where possible, their wishes should be ascertained and respected.

Features of competent performance may include:

- Assessment of severity of illness and prognosis
- Awareness of relevant ethical / legal / religious / cultural issues
- Effective communication and interpersonal skills - patient / family / staff
- Effective team-working: promote collaboration, communication and continuity
- Effective, clear collaborative decision making resulting in an agreed plan of management
- Attempt to minimize distress - patient / family / staff
- Appropriate referral / consultation - in particular the importance of palliative care specialists
- Recognition of limitations (self and others)
- Attention to patient safety

Domain 8: Competencies

The competences which make up the syllabus for this domain are listed below, with mapping to possible assessment methods and Good Medical Practice.

<table>
<thead>
<tr>

Domain 8: Syllabus

This is a detailed list of items which describe the depth and breadth of knowledge, skills and attitudes which make up the above competences. These items are not intended to be assessed individually but only as part of an assessment of the relevant competence, and have therefore not been individually mapped.

Knowledge, skills and attitudes common to all competencies

Knowledge

- Bereavement: anticipating and responding to grief
- Define the standards of practice defined by the GMC when deciding to withhold or withdraw life-prolonging treatment
- Know the role and legal standing of advance directives in different UK legislations
- Outline the principles of the Mental Capacity Act (Adults with Incapacity Act in Scotland)

Skills

- Communicate effectively with relatives who may be, in denial, anxious, angry, confused, or litigious

Attitudes

- Appreciates that the decision to withhold or withdraw treatment does not imply the termination of care
Desire to support patient, family, and other staff members appropriately during treatment withdrawal
Establishes trusting relationships with and demonstrates compassionate care of patients and their relatives
Offers psychological, social and spiritual support to patients, their relatives or colleagues as required
Respects the expressed wishes of competent patients, even when in conflict with the views of the physician
Respects the ideas and beliefs of the patient and their family and their impact on decision making (does not impose own views)
Respects the religious beliefs of the patient and is willing to liaise with a religious representative if requested by patient or family
Willingness to communicate with and support families / significant others
Acknowledges the consequences of the language used to impart information
Integrity, honesty and respect for the truth underpin relationships with patients, relatives and colleagues
Values clear decision-making and communication
Recognises personal limitations, seeks and accepts assistance or supervision (knows how, when and who to ask)

8.1 Manages the process of withholding or withdrawing treatment with the multidisciplinary team

Knowledge
Basic ethical principles: autonomy, beneficence, non-maleficence, justice
Ethical and legal issues in decision-making for the incompetent patient: incapacity
Difference between euthanasia and allowing death to occur: doctrine of double effect
Withholding and withdrawing treatment: omission and commission
Decision-making processes for withholding and withdrawing life sustaining therapies including documentation and iterative review
The limitations of intensive care medicine – expectations of what can and cannot be achieved
Principles of delivering bad news to patients and families
Local resources available to support dying patients and their families, and how to access them
Cultural and religious practices of relevance when caring for dying patients and their families
Principles of pain and symptom management
Procedure for withdrawing treatment and support
Procedure for pronouncing life extinct and subsequently completion of death certification
Responsibilities in relation to legal authorities for certifying death (e.g. coroner, procurator fiscal or equivalent), and reasons for referral
The value of autopsy (post-mortem) examination.

Skills
Recognise when treatment is unnecessary or futile
Discuss end of life decisions with members of the health care team
Willing and able to communicate and discuss issues pertaining to end of life with patients and relatives
Discuss treatment options with a patient or relatives before ICU admission
Participate in timely discussion and regular review of ‘do not attempt resuscitation’ orders and treatment limitation decisions
Relieve distress in the dying patient
Withdraw life sustaining treatment or organ support
Aware of the emotional needs of self and others; seeks and offers support appropriately

8.2 Discusses end of life care with patients and their families / surrogates

Knowledge
Basic ethical principles: autonomy, beneficence, non-maleficence, justice
Ethical and legal issues in decision-making for the incompetent patient: incapacity
Difference between euthanasia and allowing death to occur: doctrine of double effect
Withholding and withdrawing treatment: omission and commission
Decision-making processes for withholding and withdrawing life sustaining therapies including documentation and iterative review
The limitations of intensive care medicine – expectations of what can and cannot be achieved
Principles of delivering bad news to patients and families
Local resources available to support dying patients and their families, and how to access them
Bereavement: anticipating and responding to grief

### Principles of pain and symptom management

### Cultural and religious practices of relevance when caring for dying patients and their families

### Causes and prognosis of vegetative states

### Causes of brain stem death

### Cultural and religious factors which may influence attitude to brain stem death and organ donation

### Responsibilities in relation to legal authorities for certifying death (e.g. coroner, Procurator Fiscal or equivalent), and reasons for referral

**Procedure for pronouncing life extinct and subsequent completion of death certification**

The value of autopsy (post-mortem) examination.

### Skills

- Recognise when treatment is unnecessary or futile
- Willing and able to communicate and discuss issues pertaining to end of life with patients and relatives
- Discuss treatment options with a patient or relatives before ICU admission
- Differentiate competent from incompetent statements by patients
- Participate in timely discussion and regular review of ‘do not attempt resuscitation’ orders and treatment limitation decisions
- Participate in discussions with relatives about treatment limitation or withdrawal
- Explain the concept and practicalities of brain stem death and organ donation clearly
- Lead a discussion about end of life goals, preferences and decisions with a patient and/or their relatives
- Obtain consent/assent for treatment, research, autopsy or organ donation

### 8.3 Manages palliative care of the critically ill patient

#### Knowledge

- Basic ethical principles: autonomy, beneficence, non-maleficence, justice
- Ethical and legal issues in decision-making for the incompetent patient: incapacity
- Difference between euthanasia and allowing death to occur: doctrine of double effect
- Principles of delivering bad news to patients and families
- Local resources available to support dying patients and their families, and how to access them
- Cultural and religious practices of relevance when caring for dying patients and their families
- Principles of pain and symptom management

#### Skills

- Recognise when treatment is unnecessary or futile
- Willing and able to communicate and discuss issues pertaining to end of life with patients and relatives
- Discuss treatment options with a patient or relatives before ICU admission
- Differentiate competent from incompetent statements by patients
- Participate in timely discussion and regular review of ‘do not attempt resuscitation’ orders and treatment limitation decisions
- Participate in discussions with relatives about treatment limitation or withdrawal
- Lead a discussion about end of life goals, preferences and decisions with a patient and/or their relatives
- Relieve distress in the dying patient
- Aware of the emotional needs of self and others; seeks and offers support appropriately

### 8.4 Performs brain-stem death testing

#### Knowledge

- Basic ethical principles: autonomy, beneficence, non-maleficence, justice
- Causes of brain stem death
- Legal aspects of brain stem death diagnosis
- Applied anatomy and physiology of the brain and nervous system including cerebral blood supply, base of skull, autonomic nervous system and cranial nerves
- Physiological changes associated with brain stem death
- Preconditions and exclusions for the diagnosis of brain stem death
- Clinical, imaging and electrophysiologic tests to diagnose brain death: applicability
- Cultural and religious factors which may influence attitude to brain stem death and organ donation
Responsibilities in relation to legal authorities for certifying death (e.g. coroner, procurator fiscal or equivalent), and reasons for referral

<table>
<thead>
<tr>
<th>Skills</th>
</tr>
</thead>
<tbody>
<tr>
<td>Document pre-conditions and exclusions to brain stem death testing</td>
</tr>
<tr>
<td>Consult and confirm findings of brain stem function tests with colleagues as required by local / national policy or as indicated</td>
</tr>
<tr>
<td>Perform and document tests of brain stem function</td>
</tr>
</tbody>
</table>

### 8.5 Manages the physiological support of the organ donor

#### Knowledge
Basic ethical principles: autonomy, beneficence, non-maleficence, justice

Causes of brain stem death

Role of national organ/tissue procurement authority and procedures for referral

Responsibilities and activities of transplant co-ordinators

Physiological changes associated with brain stem death

Principles of management of the organ donor (according to national / local policy)

Common investigations and procedures undertaken in the ICU prior to organ donation

#### Skills
Explain the concept and practicalities of brain stem death and organ donation clearly

Liaise with transplant co-ordinators (local organ donation authority) to plan management of the organ donor

Monitor vital physiological functions as indicated

Recognise and rapidly respond to adverse trends in monitored parameters

Aware of the emotional needs of self and others; seeks and offers support appropriately

Obtain consent/assent for treatment, research, autopsy or organ donation

### 8.6 Manages donation following cardiac death

#### Knowledge
Basic ethical principles: autonomy, beneficence, non-maleficence, justice

Common investigations and procedures undertaken in the ICU prior to organ donation

Procedure for pronouncing life extinct and and subsequent completion of death certification

Responsibilities in relation to legal authorities for certifying death (e.g. Coroner, Procurator Fiscal or equivalent), and reasons for referral

Legal and ethical framework for decision making

Role of national organ/tissue procurement authority and procedures for referral

Transplant team members and their roles

Responsibilities and activities of transplant co-ordinators

#### Skills
Recognise when treatment is unnecessary or futile

Identify potential non heart beating donors

Lead a discussion about end of life goals, preferences and decisions with a patient and/or their relatives

Participate in discussions with relatives about treatment limitation or withdrawal

Liaise with transplant co-ordinators (local organ donation authority) and retrieval teams to plan management of the organ donor
Domain 9: Paediatric care

General Principles

These competencies are those expected of a practitioner of adult intensive care medicine, not a paediatric intensivist or neonatologist. Adult intensivists may be called upon to provide immediate care for the acutely ill child while awaiting transfer to a paediatric centre.

Features of competent performance may include:

- Recognition of presenting signs and symptoms
- Identification and rapid response to life-threatening complications
- Awareness of patho-physiological differences between adult and child
- Prioritise investigations and monitoring – appropriate; timely
- Appropriate differential diagnosis
- Clear decision making and immediate management strategies (including application of relevant protocols / guidelines)
- Effective multidisciplinary team-working and leadership - clear communication and instructions
- Timely and appropriate referral / consultation
- Recognition of limitations (self and others) – maintain patient safety

Domain 9: Competencies

The competences which make up the syllabus for this domain are listed below, with mapping to possible assessment methods and Good Medical Practice.

<table>
<thead>
<tr>
<th>Competence</th>
<th>Description</th>
<th>Assessment methods</th>
<th>GMP</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.1</td>
<td>Describes the recognition of the acutely ill child and initial management of paediatric emergencies</td>

<td>1</td>
</tr>
<tr>
<td>9.2</td>
<td>Describes national legislation and guidelines relating to child protection and their relevance to critical care</td>
<td>C, E</td>
<td>1</td>
</tr>
</tbody>
</table>

Domain 9: Syllabus

This is a detailed list of items which describe the depth and breadth of knowledge, skills and attitudes which make up the above competences. These items are not intended to be assessed individually but only as part of an assessment of the relevant competence, and have therefore not been individually mapped.

Knowledge, skills and attitudes common to all competencies

Knowledge

- Impact of occupational and environmental exposures, socio-economic factors, and life style factors on critical illness

Attitudes

- Recognises personal limitations, seeks and accepts assistance or supervision (knows how, when and who to ask)

9.1 Describes the recognition of the acutely ill child and initial management of paediatric emergencies

Knowledge

- Key stages of physical and psychological development
- Major anatomical and physiological differences between adults and children
- Pathophysiology and principles of management of disorders which are life-threatening to paediatric patients (may include: acute respiratory failure, cardiac failure, trauma, severe infections including meningitis and epiglottitis,
<table>

</tbody>
</table>
Domain 10: Transport

General Principles

Critically ill patients (adults or children) may require intra- or inter-hospital transfer for clinical reasons. The principles are the same for both circumstances. Competence in aero-medical transfers is not a specific requirement though they may be used for competence acquisition and assessment if local circumstances permit.

Features of competent performance may include:

- Considering alternative strategies to transfer
- Considering alternative modes and methods of transport
- Effective preparation: planning and communication tasks
- Attention to safety: anticipation and minimisation of risks; prevention of adverse events; safe use of equipment
- Maintaining effective monitoring during transportation
- Identification, prevention, and management of complications
- Continuation of care plans
- Effective hand-over and documentation
- Recognition of limitations (self and others)

Domain 10: Competencies

The competences which make up the syllabus for this domain are listed below, with mapping to possible assessment methods and Good Medical Practice.

<table>

</table>

10.1 Undertakes the transport of the mechanically ventilated critically ill patient outside the ICU

Knowledge

- Indications, risks and benefits of patient transfer (intra / inter hospital)
- Criteria for admission to, and discharge from ICU - factors influencing intensity and site of care (ward, high dependency...
Principles of safe patient transfer (before, during and after)

Ethical issues surrounding transfer

Strategies to avoid transfer-use of other facilities

Strategies to manage the unique problems associated with patient transfer - limitations of space, personnel, monitoring and equipment

Advantages and disadvantages of road ambulance, fixed and rotary wing aircraft including problems associated with altitude, noise, lighting conditions, vibration, acceleration and deceleration

Selection of mode of transport based upon clinical requirements, distance, vehicle availability and environmental conditions

Determination of required number of physicians / nurses / others during transfer and the role of paramedical personnel

Selection and operation of transport equipment: size, weight, portability, power supply/battery life, oxygen availability, durability and performance under conditions of transport

Principles of monitoring under transport conditions

Homeostatic interaction between patient and environment (e.g. thermoregulation, posture / positioning)

Communication prior to and during transport

Operation of locally available retrieval services

Physiology associated with air transport

Potential psychological impact of inter-hospital transfer and family dislocation

**Skills**

Take decisions to admit, discharge or transfer patients

Communicate with referring and receiving institutions and teams

Check transfer equipment and plan transfers with personnel prior to departure

Select appropriate staff based upon patient need

Prepare patients prior to transfer; anticipate and prevent complications during transfer - maintain patient safety at all times

Adapt and apply general retrieval principles where appropriate to pre-, intra-, and inter-hospital transportation.

Consider the need for and implements pre-transfer stabilisation before transfer

Undertake intra-hospital transfer of ventilated patients to theatre or for diagnostic procedures (e.g. CT)

Undertake inter-hospital transfers of patients with single or multiple organ failure

Maintain comprehensive documentation of the patient’s clinical condition before, during and after transport including relevant medical conditions, therapy delivered, environmental factors and logistical difficulties encountered

Determine when the patient’s needs exceed local resources or specialist expertise (requirement for transfer)
Domain 11: Patient safety and health systems management

General Principles

Error in healthcare often creates two victims – the patient, and the clinician who is usually the terminal component in an unsafe healthcare system. Creating safer systems may require changes in structures and resources, but always involves improvements in processes and organisation of care.

Features of competent performance may include:

- Professional approach - professional relationships and self governance
- Attention to sound decision making processes
- Attention to safety: identification and minimisation of risks; prevention / reporting of adverse events; safe use of equipment
- Attention to monitoring
- Appropriate prescribing and application of therapeutics
- Attention to communication and documentation tasks
- Development of collaborative care plans
- Effective multidisciplinary team-working and leadership – clear communication and promote continuity
- Timely and appropriate referral / consultation
- Recognition of limitations (self and others)

Domain 11: Competencies

The competences which make up the syllabus for this domain are listed below, with mapping to possible assessment methods and Good Medical Practice.

<table>
<thead>
<tr>
<th>Competence</th>
<th>Description</th>
<th>Assessment methods</th>
<th>GMP</th>
</tr>
</thead>
<tbody>
<tr>
<td>11.1</td>
<td>Leads a daily multidisciplinary ward round</td>
<td>M</td>
<td>1, 2, 3, 4</td>

<tr>
<td>11.7</td>
<td>Describes commonly used scoring systems for assessment of severity of illness, case mix and workload</td>
<td>C, E</td>
<td>1</td>
</tr>
<tr>
<td>11.8</td>
<td>Demonstrates an understanding of the managerial and administrative responsibilities of the ICM specialist</td>
<td>C, M, E</td>
<td>1, 3</td>
</tr>
</tbody>
</table>

Domain 11: Syllabus

This is a detailed list of items which describe the depth and breadth of knowledge, skills and attitudes which make up the above competences. These items are not intended to be assessed individually but only as part of an assessment of the relevant competence, and have therefore not been individually mapped.

Knowledge, skills and attitudes common to all competencies

Knowledge

Purpose and process of quality improvement activities such as evidence based practice, best practice guidelines and benchmarking and change management
Understand:
- the factors involved in clinical decision making such as knowledge, experience, biases, emotions, uncertainty, context
- the critical relationship between CDM and patient safety
- the ways in which we process decision making: dual process theory: system 1 and system 2
- the place of algorithms, guidelines, protocols in supporting decision making and potential pitfalls in their use
- the pivotal decisions in diagnosis, differential diagnosis, handing over and receiving diagnoses and the need to review evidence for diagnosis at these times

Confidentiality and data protection - legal and ethical issues

Principles of risk prevention

Critical incident or error monitoring and reporting

Professional responsibility and duty of care to patients placed at risk by the actions of fellow clinicians

Methods of effective communication of information (written; verbal etc)

Electronic methods of accessing medical literature and learning modalities

Principles of aseptic technique and aseptic handling of invasive medical devices

Methods of sterilisation and cleaning or disposal of equipment

Universal precautions and preventative infection control techniques (hand washing, gloves, protective clothing, sharps disposal etc.)

Understand the role of Notification of diseases within the UK and identify the principle notifiable diseases for UK and international purposes

Define local and national ‘significant event reporting systems’ relevant to specialty

Keep abreast of national patient safety initiatives including NCEPOD / SASM reports, NICE and SIGN guidelines etc

Principles of crisis management, conflict resolution, negotiation and debriefing

Skills

Professional and reassuring approach - generates confidence and trust in patients and their relatives

Acquire, interpret, synthesise, record, and communicate (written and verbal) clinical information

Consults and takes into account the views of referring clinicians; promotes their participation in decision making where appropriate

Inform colleagues, patients and relatives as applicable, of medical errors or adverse events in an honest and appropriate manner

Manage inter-personal conflicts which arise between different sectors of the organisation, professionals, patients or relatives

Maximise safety in everyday practice

Document adverse incidents in a timely, detailed and appropriate manner

Collaborate with other team members to achieve common goals

Use electronic retrieval tools (e.g. PubMed) to access information from the medical and scientific literature

Demonstrate an interest in quality control, quality improvement and reflective practice

Lead, delegate and supervise others appropriately according to experience and role

Demonstrate routine application of infection control practices to all patients, particularly hand washing between patient contacts

Use protective clothing (gloves / mask / gown / drapes) as indicated

Attitudes

Desire to minimise patient distress

Consults, communicates and collaborates effectively with patients, relatives and the health care team

Ensures effective information transfer

Adopts a problem solving approach

Enquiring mind, undertakes critical analysis of published literature

Recognises impaired performance (limitations) in self and colleagues and takes appropriate action

Act appropriately on any concerns about own or colleagues’ use of alcohol and/or other drugs.

Recognises personal limitations, seeks and accepts assistance or supervision (knows how, when and who to ask)

Accepts responsibility for patient care and staff supervision

Establishes collaborative relations with other health care providers to promote continuity of patient care as appropriate

Seeks to modify the stresses which the intensive care environment places upon patients, their relatives and members of staff
### 11.1 Leads a daily multidisciplinary ward round

<table>
<thead>
<tr>
<th>Knowledge</th>
</tr>
</thead>
<tbody>
<tr>
<td>Roles of different members of the multidisciplinary team and local referral practices</td>
</tr>
<tr>
<td>Triage and management of competing priorities</td>
</tr>
<tr>
<td>Principles of crisis management, conflict resolution, negotiation and debriefing</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Skills</th>
</tr>
</thead>
<tbody>
<tr>
<td>Demonstrate initiative in problem solving</td>
</tr>
<tr>
<td>Confirm accuracy of clinical information provided by members of the health care team with particular emphasis on that information which is handed over at admission and at shift changes</td>
</tr>
<tr>
<td>Summarise a case history</td>
</tr>
<tr>
<td>Assemble clinical and laboratory data, logically compare all potential solutions to the patient’s problems, prioritise them and establish a clinical management plan</td>
</tr>
<tr>
<td>Establish a management plan based on clinical and laboratory information</td>
</tr>
<tr>
<td>Consider potential interactions when prescribing drugs and therapies</td>
</tr>
<tr>
<td>Listen effectively</td>
</tr>
<tr>
<td>Consider risk-benefit and cost-benefit of alternative drugs and therapies</td>
</tr>
<tr>
<td>Organise multidisciplinary care for groups of patients in the ICU</td>
</tr>
</tbody>
</table>

### 11.2 Complies with local infection control measures

<table>
<thead>
<tr>
<th>Knowledge</th>
</tr>
</thead>
<tbody>
<tr>
<td>Epidemiology and prevention of infection in the ICU</td>
</tr>
<tr>
<td>Types of organisms – emergence of resistant strains, mode of transfer, opportunistic and nosocomial infections; difference between contamination, colonisation and infection</td>
</tr>
<tr>
<td>Risk of colonisation with potentially pathogenic micro-organisms and the factors associated with patient, staff, equipment and environmental colonisation</td>
</tr>
<tr>
<td>Recognition of patient groups at high risk of developing infectious complications</td>
</tr>
<tr>
<td>Autogenous infection: routes and methods of prevention</td>
</tr>
<tr>
<td>Cross infection: modes of transfer and common agents</td>
</tr>
<tr>
<td>Ventilator associated pneumonia: definition, pathogenesis and prevention</td>
</tr>
<tr>
<td>Requirements for microbiological surveillance and clinical sampling</td>
</tr>
<tr>
<td>Benefits and risks of different prophylactic antibiotic regimens</td>
</tr>
<tr>
<td>Local patterns of bacterial resistance and antibiotic policy</td>
</tr>
<tr>
<td>Infections from contaminated blood / body fluids; strategy if contaminated (e.g. needle stick injury)</td>
</tr>
<tr>
<td>Local policies and procedures relevant to practice</td>
</tr>
<tr>
<td>Published standards of care at local, national and international level (including consensus statements and care bundles). Has a critical approach to bundles and their component parts.</td>
</tr>
<tr>
<td>Understand the role of Notification of diseases within the UK and identify the principle notifiable diseases for UK and international purposes</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Skills</th>
</tr>
</thead>
<tbody>
<tr>
<td>Accept personal responsibility for the prevention of cross infection and self-infection</td>
</tr>
<tr>
<td>Apply methods to prevent autogenous infection (e.g. posture, mouth hygiene)</td>
</tr>
<tr>
<td>Implement prophylactic regimes appropriately</td>
</tr>
<tr>
<td>Prescribe antibiotics safely and appropriately</td>
</tr>
</tbody>
</table>

### 11.3 Identifies environmental hazards and promotes safety for patients and staff

<table>
<thead>
<tr>
<th>Basic Science</th>
</tr>
</thead>
<tbody>
<tr>
<td>Knowledge</td>
</tr>
<tr>
<td>Physical requirements of ICU design</td>
</tr>
<tr>
<td>Staff safety: susceptibility to harmful physical, chemical and infectious hazards in the ICU</td>
</tr>
<tr>
<td>Environmental control of temperature, humidity, air changes and scavenging systems for waste gases and vapours</td>
</tr>
<tr>
<td>Measurement of gas and vapour concentrations, (oxygen, carbon dioxide, nitrous oxide, and volatile anaesthetic agents) - environmental safety</td>
</tr>
<tr>
<td>Hazards associated with ionising radiation and methods to limit these in the ICU</td>
</tr>
<tr>
<td>Electrical safety: conditions which predispose to the occurrence of macro-shock / micro-shock; physical dangers of electrical currents; relevant standards regarding safe use of electricity in patient care; basic methods to reduce electrical safety</td>
</tr>
</tbody>
</table>

III - 75
11.4 Identifies and minimises risk of critical incidents and adverse events, including complications of critical illness

### Knowledge

Common sources of error and factors which contribute to critical incidents / adverse events (ICU environment, personnel, equipment, therapy and patient factors)

Pathogenesis, risk factors, prevention, diagnosis and treatment of complications of ICU management including:
- nosocomial infection
- ventilator associated pneumonia (VAP)
- ventilator associated lung injury - pulmonary barotrauma/volutrauma
- pulmonary oxygen toxicity
- thromboembolism (venous, arterial, pulmonary, intracardiac)
- stress ulceration
- pain
- malnutrition; refeeding syndromes
- critical illness poly-neuropathy, motor-neuropathy and myopathy

Modification of treatment or therapy to minimise the risk of complications and appropriate monitoring to allow early detection of complications

Recognition of patient groups at high risk for developing complications

Risk of bleeding: indications, contraindications, monitoring and complications of therapeutic anticoagulants

Epidemiology and prevention of infection in the ICU

Types of organisms - emergence of resistant strains, mode of transfer, opportunistic and nosocomial infections; difference between contamination, colonisation and infection

Autogenous infection: routes and methods of prevention

Local patterns of bacterial resistance and antibiotic policy

Requirements for microbiological surveillance and clinical sampling

Benefits and risks of different prophylactic antibiotic regimens

Staff safety: susceptibility to harmful physical, chemical and infectious hazards in the ICU; psychological?

Factors that determine the optimum staff establishment for specialist and junior medical staff, nurses and allied professional and non-clinical ICU staff

Principles of crisis management, conflict resolution, negotiation and debriefing

Equipment requirements and selection: clinical need and priority; accuracy, reliability, safety and practical issues (ease of use, acceptance by staff)

Local process for ordering consumables and maintaining equipment

Local policies and procedures relevant to practice
Published standards of care at local, national and international level (including consensus statements and care bundles)
Purpose and methods of clinical audit (e.g. mortality reviews, complication rates, National Audits) and quality improvement
Plan of action / local procedures to be followed when a health care worker is noticed to be in distress, whether or not patients are considered to be at risk
Identification and critical appraisal of literature; integration of findings into local clinical practice

**Skills**

Assemble clinical and laboratory data, logically compare all potential solutions to the patient’s problems, prioritise them and establish a clinical management plan
Consider potential interactions when prescribing drugs and therapies
Record relevant clinical information accurately
Confirm accuracy of clinical information provided by members of the health care team
Monitor complications of critical illness
Accept personal responsibility for the prevention of cross infection and self-infection
Aware of relevant guidelines and consensus statements and apply these effectively in every day practice under local conditions
Implement and evaluate protocols and guidelines
Participate in the processes of clinical audit, peer review and continuing medical education

<table>
<thead>
<tr>
<th>11.5 Organises a case conference</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Knowledge</strong></td>
</tr>
<tr>
<td>Roles of different members of the multidisciplinary team and local referral practices</td>
</tr>
<tr>
<td>Principles of crisis management, conflict resolution, negotiation and debriefing</td>
</tr>
<tr>
<td><strong>Skills</strong></td>
</tr>
<tr>
<td>Identify members of the health care team which require representation at a case conference</td>
</tr>
<tr>
<td>Timely organisation – liaise with members of the health care team to identify a suitable time and place for a case conference to maximise attendance</td>
</tr>
<tr>
<td>Identify necessary notes / investigations to support discussion during a case conference:</td>
</tr>
<tr>
<td>Summarise a case history</td>
</tr>
<tr>
<td>Discuss technical, cognitive, affective, contextual and non-technical factors in relation to the case in question</td>
</tr>
<tr>
<td>Plan long-term multidisciplinary care for patients in the ICU</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>11.6 Critically appraises and applies guidelines, protocols and care bundles</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Knowledge</strong></td>
</tr>
<tr>
<td>Purpose and process of quality improvement activities such as evidence based practice, best practice guidelines &amp; benchmarking and change management</td>
</tr>
<tr>
<td>Purpose and methods of clinical audit (e.g. mortality reviews, complication rates) and quality improvement</td>
</tr>
<tr>
<td>Published standards of care at local, national and international level (including consensus statements and care bundles)</td>
</tr>
<tr>
<td>Local policies and procedures relevant to practice</td>
</tr>
<tr>
<td>Treatment algorithms for common medical emergencies</td>
</tr>
<tr>
<td>Recent advances in medical research relevant to intensive care</td>
</tr>
<tr>
<td>Identification and critical appraisal of literature; integration of findings into local clinical practice; critical appraisal of whether this evidence is relevant to this particular patient.</td>
</tr>
<tr>
<td>Principles of appraisal of evidence: levels of evidence; interventions; diagnostic tests; prognosis; integrative literature (meta-analyses, practice guidelines, decision and economic analyses)</td>
</tr>
<tr>
<td>Principles of applied research and epidemiology necessary to evaluate new guidelines / forms of therapy</td>
</tr>
<tr>
<td>Research methods (see basic sciences)</td>
</tr>
<tr>
<td>Statistical concepts (see basic sciences)</td>
</tr>
<tr>
<td><strong>Skills</strong></td>
</tr>
<tr>
<td>Aware of relevant guidelines and consensus statements and apply these effectively in every day practice under local conditions</td>
</tr>
<tr>
<td>Implement and evaluate protocols and guidelines</td>
</tr>
<tr>
<td>Propose realistic initiatives / projects to promote improvement</td>
</tr>
<tr>
<td>Use a systematic approach to locate, appraise, and assimilate evidence from scientific studies relevant to a patient’s health problem</td>
</tr>
</tbody>
</table>
Participate in the processes of clinical quality improvement, peer review and continuing medical education
Recognise the need for clinical audit and quality improvement activities to be non-threatening and non-punitive to individuals
Manage resistance to change in the ICU / hospital environment in order to optimize the outcome of a task

11.7 Describes commonly used scoring systems for assessment of severity of illness, case mix and workload

Knowledge
- Principles of outcome prediction / prognostic indicators and treatment intensity scales; limitations of scoring systems in predicting individual patient outcome
- Principles of general and organ-specific scoring systems and their usefulness in assessing likely outcome of an illness (e.g. Glasgow Coma Scale, APACHE II and III, PRISM, MEWS, organ system failure scores, injury severity scores)
- Influence of injury or illness being considered on the validity of a scoring system as a predictor of likely outcome (e.g. Glasgow Coma Score (GCS) in head injury versus drug overdose)
- One general method for measuring severity of illness (severity scoring systems)
- Principles of case-mix adjustment
- Principles of workforce planning
- Factors that determine the optimum staff establishment for specialist and junior medical staff, nurses and allied professional and non-clinical ICU staff

11.8 Demonstrates an understanding of the managerial and administrative responsibilities of the ICM specialist

Knowledge
- Principles of local / national health care provision; strategic planning of the ICU service (structure, function, financing) within the wider health care environment
- The non-clinical role of the ICU specialist and how these activities contribute to the efficacy of the ICU, the profile of the ICU within the hospital and the quality of patient management
- Principles of administration and management
- Physical requirements of ICU design
- Principles of resource management; ethics of resource allocation in the face of competing claims to care
- Concept of risk : benefit ratio and cost effectiveness of therapies
- Difference between absolute requirement and possible benefit when applying expensive technology to critically ill patients
- Equipment requirements and selection: clinical need and priority; accuracy, reliability, safety and practical issues (ease of use, acceptance by staff)
- Local process for ordering consumables and maintaining equipment
- Principles of health economics, departmental budgeting, financial management and preparation of a business plan
- Factors that determine the optimum staff establishment for specialist and junior medical staff, nurses and allied professional and non-clinical ICU staff
- Principles of workforce planning
- Practical application of equal opportunities legislation
- Principles of national / local health care legislation applicable to ICM practice
- Principles of crisis management, conflict resolution, negotiation and debriefing
- Purpose and methods of clinical audit (e.g. mortality reviews, complication rates) and quality improvement
- Recent advances in medical research relevant to intensive care
- Identification and critical appraisal of literature; integration of findings into local clinical practice
- Principles of appraisal of evidence: levels of evidence; interventions; diagnostic tests; prognosis; integrative literature (meta-analyses, practice guidelines, decision and economic analyses)
- Local policies and procedures relevant to practice
- Published standards of care at local, national and international level (including consensus statements and care bundles)
- Understand the legislative framework within which healthcare is provided in the UK – in particular death certification and the role of the Coroner/Procurator Fiscal. child protection legislation; mental health legislation (including powers to detain a patient and giving emergency treatment against a patient’s will under common law); advanced directives and living Wills; withdrawing and withholding treatment; decisions regarding resuscitation of patients; surrogate decision making; organ donation and retention; communicable disease notification; medical risk and driving; Data Protection and
<table>
<thead>
<tr>
<th>Freedom of Information Acts; provision of continuing care and community nursing care by a local authorities</th>

<tr>
<td>Contribute to departmental / ICU activities</td>
</tr>
<tr>
<td>Propose realistic initiatives / projects to promote improvement</td>
</tr>
<tr>
<td>Manage resistance to change in the ICU / hospital environment in order to optimize the outcome of a task</td>
</tr>
<tr>
<td>Respect, acknowledge and encourage the work of others</td>
</tr>
</tbody>
</table>
Domain 12: Professionalism

General Principles

A professional is someone with special expertise who gains the privilege of self-regulation through vocation and service, high ethical standards, critical self-appraisal, and personal development. Professionalism includes the capacity for clinical judgement (the translation of data into knowledge and knowledge into appropriate actions). These distinguishing attitudes and behaviours can be evaluated in terms of communication skills, professional relationships, and personal governance (personal standards, self-development, insight and self-control).

Domain 12: Competencies

The competences which make up the syllabus for this domain are listed below, with mapping to possible assessment methods and Good Medical Practice.

<table>
<thead>
<tr>
<th>Competence</th>
<th>Description</th>
<th>Assessment methods</th>
<th>GMP</th>
</tr>
</thead>
<tbody>
<tr>

III - 80
### Skills

#### Acquire, interpret, synthesize, record, and communicate (written and verbal) clinical information

- Professional and reassuring approach - generates confidence and trust in patients and their relatives

- Communicate effectively with relatives who may be anxious, angry, confused, or litigious

In preparing to break bad news:

- Sets aside sufficient uninterrupted time
- Chooses an appropriate private environment and ensures that there will be no unplanned disturbances
- Has sufficient information regarding prognosis and treatment
- Ensures the individual has appropriate support if desired
- Structures the interview
- Is honest, factual, realistic and empathic
- Aware of relevant guidance documents

- Collaborate with other team members to achieve common goals

- Lead, delegate and supervise others appropriately according to experience and role

- Participate appropriately in educational activities and teaching medical and non-medical members of the health care team

- Manage inter-personal conflicts which arise between different sectors of the organisation, professionals, patients or relatives

- Maximise safety in everyday practice in part by good quality decision making sustained by critical thinking, reflection and metacognition

- Use electronic retrieval tools (e.g. PubMed) to access information from the medical and scientific literature

#### Attitudes

- Acknowledges the consequences of the language used to impart information

- Recognises that communication is a two-way process

- Sensitive to the reactions and emotional needs of others

- Remains calm in stressful or high pressure situations and adopts a timely, rational approach

- Desire to minimise patient distress

- Regards each patient as an individual

- Establishes trusting relationships with and demonstrates compassionate care of patients and their relatives

- Sensitive to patients' expectations and responses; considers their perspective in order to understand their conduct and attitudes

- Respects the expressed wishes of competent patients, even when in conflict with the views of the physician

- Respects the cultural and religious beliefs of the patient; demonstrate an awareness of their impact on decision making

- Recognises and manages circumstances where personal prejudices or biases may affect behaviour, including cultural, financial and academic aspects skill

- Promotes respect for patient privacy, dignity and confidentiality

- Willingness to communicate with and support families / significant others

- Integrity, honesty and respect for the truth underpin relationships with patients, relatives and colleagues

- Approachable and accessible when on duty
Well-being of the patient takes precedence over the needs of society or research
Generates enthusiasm amongst others
Fosters effective communication and relationships with medical and nursing staff in other wards / departments
Participates in, and promotes continuing education of members of the multi-disciplinary health care team.
Contributes effectively to interdisciplinary team activities.
Accepts responsibility for patient care and staff supervision
Recognises impaired performance (limitations) in self and colleagues and takes appropriate action
Act appropriately on any concerns about own or colleagues’ use of alcohol and/or other drugs.
Takes responsibility for his/her personal physical and mental health, especially where impairment may affect patient care and professional conduct and seeks appropriate help if required
Recognises personal limitations, seeks and accepts assistance or supervision (knows how, when and who to ask)
Desire to contribute to the development of new knowledge
Enquiring mind, undertakes critical analysis of published literature
Adopts a problem solving approach
Recognises and uses teaching and learning opportunities arising from clinical experiences, including errors
Desire and willingness to share knowledge
Assesses, communicates with, and supports patients and families confronted with critical illness
Recognises personal strengths and limitations as a consultant to other specialists
Seeks to modify the stresses which the intensive care environment places upon patients, their relatives and members of staff
Seeks to recognise those changes in the specialty, medicine or society, which should modify their practice and adapt their skills accordingly.

**Communication**

| 12.1 | Communicates effectively with patients and relatives |
| 12.2 | Communicates effectively with members of the health care team |
| 12.3 | Maintains accurate and legible records / documentation |

**Knowledge**

Consent and assent in the competent and non-competent patient
Principles of the guidance given by the GMC on consent, in particular:
- Understand that consent is a process that may culminate in, but is not limited to, the completion of a consent form
- Understand the particular importance of considering the patient's level of understanding and mental state (and also that of the relatives/carers where relevant) and how this may impair their capacity for informed consent
Principles of delivering bad news to patients and families
Principles of crisis management, conflict resolution, negotiation and debriefing
Strategies to communicate to the general population critical care issues and their impact on the maintenance and improvement of health care.

**Skills**

Communicate with patients and relatives - give accurate information and re-iterate to ensure comprehension; clarify ambiguities
Discuss treatment options with a patient or relatives before ICU admission
Differentiate competent from incompetent statements by patients
Listen effectively
Use non-verbal communication appropriately
Use available opportunities and resources to assist in the development of personal communication skills
Communicate effectively with professional colleagues to obtain accurate information and plan care
Obtain consent/assent for treatment, research, autopsy or organ donation
Preparation of patient lists with clarification of problems and ongoing care plan

**Attitudes**

Communicate changes in priority to others
Work in a supportive, empathic and non-judgemental manner without collusion
Be confident and comfortable discussing alcohol and drug use with patients
**Professional relationships with patients and relatives**

| 12.4 | Involves patients (or their surrogates if applicable) in decisions about care and treatment |
| 12.5 | Demonstrates respect of cultural and religious beliefs and an awareness of their impact on decision making |
| 12.6 | Respects privacy, dignity, confidentiality and legal constraints on the use of patient data |

**Knowledge**
- Basic ethical principles: autonomy, beneficence, non-maleficence, justice
- Consent and assent in the competent and non-competent patient
- Ethical and legal issues in decision-making for the incompetent patient
- Principles of crisis management, conflict resolution, negotiation and debriefing
- Sources of information about different cultural and religious attitudes and beliefs to life threatening illness and death available to health care professionals.

**Skills**
- Communicate with patients and relatives - give accurate information and re-iterate to ensure comprehension; clarify ambiguities
- Involve patients in decisions about their care and treatment when appropriate
- Discuss treatment options with a patient or relatives before ICU admission
- Differentiate competent from incompetent statements by patients
- Obtain consent/assent for treatment, research, autopsy or organ donation
- Listen effectively

**Professional relationships with members of the healthcare team**

| 12.7 | Collaborates and consults; promotes team-working |
| 12.8 | Ensures continuity of care through effective hand-over of clinical information |
| 12.9 | Supports clinical staff outside the ICU to enable the delivery of effective care |
| 12.10 | Appropriately supervises, and delegates to others, the delivery of patient care |

**Knowledge**
- Management of information
- Principles of crisis management, conflict resolution, negotiation and debriefing
- Principles of professional appraisal and constructive feedback

**Skills**
- Act appropriately as a member or leader of the team (according to skills and experience)
- Communicate effectively with professional colleagues to obtain accurate information and plan care
- Consult and take into account the views of referring clinicians; promote their participation in decision making where appropriate
- Liaise with medical and nursing staff in other departments to ensure optimal communication and continuing care after ICU discharge
- Respect, acknowledge and encourage the work of others
- Contribute to professional meetings - understand their rules, structure and etiquette
- Listen effectively

**Self governance**

| 12.11 | Takes responsibility for safe patient care |
| 12.12 | Formulates clinical decisions with respect for ethical and legal principles |
| 12.13 | Seeks learning opportunities and integrates new knowledge into clinical practice |
| 12.14 | Participates in multidisciplinary teaching |
| 12.15 | Participates in quality improvement under supervision |

**Knowledge**
- Basic ethical principles: autonomy, beneficence, non-maleficence, justice
- Ethical and legal issues in decision-making for the incompetent patient
- Management of information
| Principles of crisis management, conflict resolution, negotiation and debriefing |
| Principles of professional appraisal and constructive feedback |
| Principles of adult education and factors that promote learning |
| Methods of quality improvement and translating findings into sustained change in practice |
| Use of information technology to optimize patient care and life-long learning |
| Identification and critical appraisal of literature; integration of findings into local clinical practice |
| Principles of appraisal of evidence: levels of evidence; interventions; diagnostic tests; prognosis; integrative literature (meta-analyses, practice guidelines, decision and economic analyses) |
| Principles of applied research and epidemiology necessary to evaluate new guidelines / forms of therapy |
| Principles of medical research: research questions; protocol design; power analysis, data collection, data analysis and interpretation of results; manuscript preparation and publication rules. |
| Ethical principles involved in conducting research (including subject protection, consent, confidentiality and competing interests) and national ethical approval processes |
| Ethical management of relationships with industry |
| Requirements of ICM training at local and national level |
| Understand that organisation is key to time management |
| Outline techniques for improving time management |

**Skills**

| Contribute to departmental / ICU activities |
| Participate in the processes of clinical audit, quality improvement, peer review and continuing medical education |
| Propose realistic initiatives / projects to promote improvement |
| Develop, implement and monitor a personal continuing education plan including maintenance of a professional portfolio |
| Use learning aids and resources to undertake self directed learning |
| Use a systematic approach to locate, appraise, and assimilate evidence from scientific studies relevant to a patient’s health problem and make an individual assessment of whether this evidence is relevant to this patient. |
| Demonstrate initiative in problem solving |
| Listen effectively |
| Attentive to detail, punctual, reliable, polite and helpful |
| Take decisions at a level commensurate with experience; accept the consequences of these decisions |
| Utilise personal resources effectively to balance patient care, learning needs, and outside activities. |
| Identify clinical and clerical tasks requiring attention or predicted to arise |
| Estimate the time likely to be required for essential tasks and plan accordingly |
| Group together tasks when this will be the most effective way of working |
| Recognise the most urgent / important tasks and ensure that they are managed expediently |
| Regularly review and re-prioritise personal and team work load |
| Organise and manage workload effectively |

**Attitudes**

| Ability to work flexibly and deal with tasks in an effective fashion |
| Recognise when you or others are falling behind and take steps to rectify the situation |
Basic Science competencies also appear within the relevant expanded Syllabus domains (see above). All Basic Science competencies can be tested within the FFICM examinations.

**Anatomy**

**Respiratory system:**
- Mouth, nose, pharynx, larynx, trachea, main bronchi, segmental bronchi, structure of bronchial tree: differences in the child
- Airway and respiratory tract, blood supply, innervation and lymphatic drainage
- Pleura, mediastinum and its contents
- Lungs, lobes, microstructure of lungs
- Diaphragm, other muscles of respiration, innervations
- The thoracic inlet and 1st rib
- Interpretation of a chest x-ray

**Cardiovascular system:**
- Heart, chambers, conducting system, blood and nerve supply
- Congenital deviations from normal anatomy
- Pericardium
- Great vessels, main peripheral arteries and veins
- Foetal and materno-foetal circulation

**Nervous system:**
- Brain and its subdivisions
- Spinal cord, structure of spinal cord, major ascending and descending pathways
- Spinal meninges, subarachnoid and extradural space, contents of extradural space
- Cerebral blood supply
- CSF and its circulation
- Spinal nerves, dermatomes
- Brachial plexus, nerves of arm
- Intercostal nerves
- Nerves of abdominal wall
- Nerves of leg and foot
- Autonomic nervous system
- Sympathetic innervation, sympathetic chain, ganglia and plexuses
- Parasympathetic innervations
- Stellate ganglion
- Cranial nerves: base of skull: trigeminal ganglion
- Innervation of the larynx
- Eye and orbit

**Vertebral column:**
- Cervical, thoracic, and lumbar vertebrae
- Interpretation of cervical spinal imaging in trauma
- Sacrum, sacral hiatus
- Ligaments of vertebral column
- Surface anatomy of vertebral spaces, length of cord in child and adult

**Surface anatomy:**
- Structures in antecubital fossa
- Structures in axilla: identifying the brachial plexus
- Large veins and anterior triangle of neck
- Large veins of leg and femoral triangle
- Arteries of arm and leg
- Landmarks for tracheostomy, cricothyrotomy
- Abdominal wall (including the inguinal region): landmarks for suprapubic urinary and peritoneal lavage catheters
- Landmarks for intrapleural drains and emergency pleurocentesis
- Landmarks for pericardiocentesis

**Abdomen:**
- Gross anatomy of intra-abdominal organs
- Blood supply to abdominal organs and lower body
## Physiology & Biochemistry

### General:
- Organisation of the human body and homeostasis
- Variations with age
- Function of cells; genes and their expression
- Mechanisms of cellular and humoral defence
- Cell membrane characteristics; receptors
- Protective mechanisms of the body
- Genetics & disease processes

### Biochemistry:
- Acid base balance and buffers
- Ions e.g. Na⁺, K⁺, Ca²⁺, Cl⁻, HCO₃⁻, Mg²⁺, PO₄⁻
- Cellular and intermediary metabolism; variations between organs
- Enzymes

### Body fluids:
- Capillary dynamics and interstitial fluid
- Oncotic pressure
- Osmolarity: osmolality, partition of fluids across membranes
- Lymphatic system
- Special fluids: cerebrospinal, pleural, pericardial and peritoneal fluids

### Haematology & Immunology:
- Red blood cells: haemoglobin and its variants
- Blood groups
- Haemostasis and coagulation; pathological variations
- White blood cells
- Inflammation and its disorders
- Immunity and allergy

### Muscle:
- Action potential generation and its transmission
- Neuromuscular junction and transmission
- Muscle types
- Skeletal muscle contraction
- Motor unit
- Muscle wasting
- Smooth muscle contraction: sphincters

### Heart & Circulation:
- Cardiac muscle contraction
- The cardiac cycle: pressure and volume relationships
- Rhythmicity of the heart
- Regulation of cardiac function; general and cellular
- Control of cardiac output (including the Starling relationship)
- Fluid challenge and heart failure
- Electrocardiogram and arrhythmias
- Neurological and humoral control of systemic blood pressures, blood volume and blood flow (at rest and during physiological disturbances e.g. exercise, haemorrhage and Valsalva manoeuvre)
- Peripheral circulation: capillaries, vascular endothelium and arteriolar smooth muscle
- Autoregulation and the effects of sepsis and the inflammatory response on the peripheral vasculature
- Characteristics of special circulations including: pulmonary, coronary, cerebral, renal, portal and foetal

### Renal tract:
- Blood flow, glomerular filtration and plasma clearance
- Tubular function and urine formation
- Endocrine functions of kidney
- Assessment of renal function
- Regulation of fluid and electrolyte balance
- Regulation of acid-base balance
- Micturition
- Pathophysiology of acute renal failure
**Respiration:**
- Gaseous exchange: O2 and CO2 transport, hypoxia and hyper- and hypocapnia, hyper- and hypobaric pressures
- Functions of haemoglobin in oxygen carriage and acid-base equilibrium
- Pulmonary ventilation: volumes, flows, dead space
- Effect of IPPV and PEEP on lungs and circulation
- Mechanics of ventilation: ventilation/perfusion abnormalities
- Control of breathing, acute and chronic ventilatory failure, effect of oxygen therapy
- Non-respiratory functions of the lungs
- Cardio-respiratory interactions in health & disease

**Nervous system:**
- Functions of nerve cells: action potentials, conduction, synaptic mechanisms and transmitters
- The brain: functional divisions
- Intracranial pressure: cerebrospinal fluid, blood flow
- Maintenance of posture
- Autonomic nervous system: functions
- Neurological reflexes
- Motor function: spinal and peripheral
- Senses: receptors, nociception, special senses
- Pain: afferent nociceptive pathways, dorsal horn, peripheral and central mechanisms, neuromodulatory systems, supraspinal mechanisms, visceral pain, neuropathic pain, influence of therapy on nociceptive mechanisms
- Spinal cord: anatomy and blood supply, effects of spinal cord section

**Liver:**
- Functional anatomy and blood supply
- Metabolic functions
- Tests of function
- Effects of alcohol and other drugs on the unborn child, children and families
- Recommended limits on alcohol intake

**Gastrointestinal system:**
- Gastric function; secretions, nausea and vomiting
- Gut motility, sphincters and reflex control
- Digestive functions and enzymes
- Nutrition: calories, nutritional fuels and sources, trace elements, growth factors

**Metabolism & Nutrition:**
- Nutrients: carbohydrates, fats, proteins, vitamins, minerals and trace elements
- Metabolic pathways, energy production and enzymes; metabolic rate
- Hormonal control of metabolism: regulation of plasma glucose, response to trauma
- Physiological alterations in starvation, obesity, exercise and the stress response
- Body temperature and its regulation

**Endocrinology:**
- Mechanisms of hormonal control: feedback mechanisms, effect on membrane and intracellular receptors
- Central neuro-endocrine interactions
- Adrenocortical hormones
- Adrenal medulla: adrenaline (epinephrine) and noradrenaline (norepinephrine)
- Pancreas: insulin, glucagon and exocrine function
- Thyroid and parathyroid hormones and calcium homeostasis

**Pregnancy:**
- Physiological changes associated with a normal pregnancy and delivery
- Materno-foetal, foetal and neonatal circulation
- Functions of the placenta: placental transfer
- Foetus: changes at birth

**Pharmacology**

**Applied chemistry:**
- Types of intermolecular bonds
- Laws of diffusion. Diffusion of molecules through membranes
- Solubility and partition coefficients
- Ionization of drugs
- Drug isomerism
- Protein binding
- Oxidation and reduction
### Principles of Pharmacology:

- Dynamics of drug-receptor interaction
- Agonists, antagonists, partial agonists, inverse agonists
- Efficacy and potency. Tolerance
- Receptor function and regulation
- Metabolic pathways; enzymes; drug: enzyme interactions; Michaelis-Menten equation
- Enzyme inducers and inhibitors
- Mechanisms of drug action
- Ion channels: types: relation to receptors. Gating mechanisms
- Signal transduction: cell membrane/receptors/ion channels to intracellular molecular targets, second messengers
- Action of gases and vapours
- Osmotic effects. pH effects. Adsorption and chelation
- Mechanisms of drug interactions
- Inhibition and promotion of drug uptake. Competitive protein binding. Receptor inter-actions
- Effects of metabolites and other degradation products.

### Pharmacokinetics & Pharmacodynamics

- Drug uptake from: gastrointestinal tract, lungs, nasal, transdermal, subcutaneous, IM, IV, epidural and intrathecal routes
- Bioavailability
- Factors determining the distribution of drugs: perfusion, molecular size, solubility, protein binding
- The influence of drug formulation on disposition
- Distribution of drugs to organs and tissues:
  - Body compartments
  - Influence of specialised membranes: tissue binding and solubility
  - Materno-foetal distribution
  - Distribution in CSF and extradural space
- Modes of drug elimination:
  - Direct excretion
  - Metabolism in organs of excretion: phase I & II mechanisms
  - Renal excretion and urinary pH
  - Non-organ breakdown of drugs
- Pharmacokinetic analysis:
  - Concept of a pharmacokinetic compartment
  - Apparent volume of distribution
  - Orders of kinetics
  - Clearance concepts applied to whole body and individual organs
  - Simple 1 and 2 compartmental models: concepts of wash-in and washout curves
  - Physiological models based on perfusion and partition coefficients
  - Effect of organ blood flow: Fick principle
  - Pharmacokinetic variation: influence of body size, sex, age, disease, pregnancy, anaesthesia, trauma, surgery, smoking, alcohol and other drugs
- Effects of acute organ failure (liver, kidney) on drug elimination
- Influence of renal replacement therapies on clearance of commonly used drugs
- Pharmacodynamics: concentration-effect relationships: hysteresis
- Pharmacogenetics: familial variation in drug response
- Adverse reactions to drugs: hypersensitivity, allergy, anaphylaxis, anaphylactoid reactions
- Addictive potential of alcohol and other drugs, including prescribed and over-the-counter medicines
Systemic Pharmacology:
Hypnotics, sedatives and intravenous anaesthetic agents
Simple analgesics
Opioids and other analgesics; Opioid antagonists
Non-steroidal anti-inflammatory drugs
Neuromuscular blocking agents (depolarising and non-depolarising) and anti-cholinesterases
Drugs acting on the autonomic nervous system (including inotropes, vasodilators, vasoconstrictors, antiarrhythmics, diuretics)
Drugs acting on the respiratory system (including respiratory stimulants and bronchodilators)
Antihypertensives
Anticonvulsants
Anti-diabetic agents
Diuretics
Antibiotics
Corticosteroids and other hormone preparations
Antacids. Drugs influencing gastric secretion and motility
Antiemetic agents
Local anaesthetic agents
Immunosuppressants
Principles of therapy based on modulation of inflammatory mediators indications, actions and limitations
Plasma volume expanders
Antihistamines
Antidepressants
Anticoagulants
Vitamins A-E, folate, B12

Physics & Clinical Measurement

Mathematical concepts:
Relationships and graphs
Concepts of exponential functions and logarithms: wash-in and washout
Basic measurement concepts: linearity, drift, hysteresis, signal: noise ratio, static and dynamic response
SI units: fundamental and derived units
Other systems of units where relevant to ICM (e.g. mmHg, bar, atmospheres)
Simple mechanics: Mass, Force, Work and Power

Heat:
Freezing point, melting point, latent heat
Conduction, convection, radiation
Mechanical equivalent of heat: laws of thermodynamics
Measurement of temperature and humidity

Gases & Vapours:
Absolute and relative pressure
The gas laws; triple point; critical temperature and pressure
Density and viscosity of gases
Laminar and turbulent flow; Poiseuille's equation, the Bernoulli principle
Vapour pressure: saturated vapour pressure
Measurement of volume and flow in gases and liquids
The pneumotachograph and other respirometers
Principles of surface tension

Electricity & Magnetism:
Basic concepts of electricity and magnetism
Capacitance, inductance and impedance
Amplifiers: bandwidth, filters
Amplification of biological potentials: ECG, EMG, EEG
Sources of electrical interference
Processing, storage and display of physiological measurements
Bridge circuits

Electrical safety:
Principles of cardiac pacemakers and defibrillators
Electrical hazards: causes and prevention
Electrocution, fires and explosions
### Diathermy and its safe use
Basic principles and safety of lasers
Basic principles of ultrasound and the Doppler effect

### Pressure & Flow Monitoring:
*Principles of pressure transducers*
Resonance and damping, frequency response
Measurement and units of pressure
Direct and indirect methods of blood pressure measurement; arterial curve analysis
Principles of pulmonary artery and wedge pressure measurement
Cardiac output: Fick principle, thermodilution

### Clinical measurement:
Measurement of gas and vapour concentrations, (oxygen, carbon dioxide, nitrous oxide, and volatile anaesthetic agents) using infrared, paramagnetic, fuel cell, oxygen electrode and mass spectrometry methods
Measurement of H+, pH, pCO2, pO2
Measurement CO2 production/ oxygen consumption/ respiratory quotient
Colligative properties: osmometry
Simple tests of pulmonary function e.g. peak flow measurement, spirometry
Capnography
Pulse oximetry
Measurement of neuromuscular blockade
Measurement of pain

### Data collection:
Simple aspects of study design (research question, selection of the method of investigation, population, intervention, outcome measures)
Power analysis
Defining the outcome measures and the uncertainty of measuring them
The basic concept of meta-analysis and evidence based medicine

### Descriptive statistics:
Types of data and their representation
The normal distribution as an example of parametric distribution
Indices of central tendency and variability

### Deductive & inferential statistics:
Simple probability theory and the relation to confidence intervals
The null hypothesis
Choice of simple statistical tests for different data types
Type I and type II errors
Inappropriate use of statistics
INTENTIONALLY BLANK PAGE
